

Equipment Deficiency, Major Repair or Improvement

Wildland Fire Equipment Operators and Repair Personnel are requested to report a deficiency, major repair, or improvement. A major repair is one that cost \$1000 or more. The information reported will be used to help track deficiencies and make improvements to US Forest Service Wildland Fire Equipment.

This reporting form does not replace the direction to use the deviation process. Just because a deficiency or improvement has been identified, end-users cannot just make the changes without following the deviation process.

Problem Statement

Other than repairs, nothing should be done to deviate from specifications and standards.

Solution

After selecting the Submit Form, it will prompt you to your e-mail provider before sending. At this point it is recommended that you attach any pictures or supporting documentation that will assist in analyzing this submission.
