| MAP | Condition | Actions | Resources | Status Completed |
|-----|--|---|--|------------------|
| 1 | <p>Log Fire – Mill Creek</p> <p>Condition</p> <p>The Mill MAP has already been reached; Fire backing towards Mill Creek, Mill Creek Trail and the main Mill Creek Road, and has slopped over Mill Creek. The details about this MAP that follow therefore describe actions already underway.</p> <p>Mill Creek is serving as a primary line to keep fire from spreading south and southeast.</p> <p>Location</p> <p>South of the fire’s current perimeter.</p> <p>Along Mill Creek from Mill Creek Ponds to where Mill Creek Road intersects Emigrant Creek Road.</p> <p>Management Intent</p> <p>If minimal effort and exposure can be taken to suppress slop overs or spot fires; action will be taken. Observe fire behavior and relay to Operations when fire is likely to further breach the MAP.</p> | <p>Actions</p> <p>If fire crosses Mill Creek an evacuation advisory is triggered.</p> <p>Extinguish any spot fires or slop overs as quickly as possible, but only if chances of catching any slop over or spot fire has a high probability of success.</p> <p>Implement a structure protection plan for the Mill Creek Road structures.</p> <p>Values to Protect</p> <p>Structures and private property. Numerous residences exist at the base of Mill Creek. As the fire spreads south, residences in Kidder Creek will be at risk.</p> <p>Timber Vest is the main landowner in this area. High valued timber and economic loss is of major concern. If the fire were to breach this MAP, additional Timber Vest land would largely be impacted.</p> <p>Mill Creek Trailhead is currently not open for public use; however, if this MAP is passed additional trail closures and dispersed camping may be impacted (i.e. Kidder Creek).</p> <p>Fish bearing streams that are habitat for Steelhead, Coho Salmon, and endangered aquatic species.</p> <p>Water quality impacts; including agriculture use and cultural uses of water in the area. Quartz Valley Indian Reservation cultural uses.</p> <p>Probability of Success</p> <p>Low.</p> <p>Fuel concentration is high, and rolling rocks present a hazard to personnel in the area. Fuels have been extremely dry and there has been active fire behavior. There is limited ground access to the area thus the actions would require aviation support; which is limited. The fire is currently backing down near Mill Creek Trailhead area. Mill Creek drainage is wet; however, continuous fuels go near the creek. The likelihood of a slope over or spot fire is likely – leaving a likelihood of success to be low and depends largely on the success of resources to catch any fire that breaches the MAP.</p> | <p>Resources</p> <p>Resources to be determined by the IMT.</p> <p>Consequences of Not Taking Action</p> <p>A much larger and potentially more expensive fire</p> <p>Increased firefighter exposure to the dynamic fire environment</p> <p>Private property damage and potential loss of structures</p> <p>Increased threat to natural, historic, and cultural resources</p> <p>Impacts to recreational activities</p> <p>Longer period of poor air quality</p> <p>Notifications</p> <p>Agency Administrator</p> <p>Forest fire duty officer</p> <p>Resource advisors</p> <p>Siskiyou Sheriff</p> <p>California Highway Patrol</p> <p>Office of Emergency Services</p> <p>Community liaison</p> <p>Communities of Mill Creek, Quartz Valley and Kidder Creek</p> | |

| MAP | Condition | Actions | Resources | Status Completed |
|-----|--|---|---|------------------|
| 2v2 | <p>Log Fire – Shackleford Creek</p> <p>Location</p> <p>North of the fire's current perimeter.</p> <p>Area along Shackleford Creek from Campbell Lake to Shackleford Creek Falls.</p> <p>Management Intent</p> <p>Utilize available resources to suppress the fire at this MAP to eliminate the threat to identified values at risk.</p> | <p>Actions</p> <p>Brush where necessary on waterway and use portable pumps to support direct and indirect attack fire suppression actions</p> <p>Develop a structure protection plan for the Reynolds Cabin and Structures at Shackleford Creek Trailhead.</p> <p>Values to Protect</p> <p>Structures and infrastructure at the Shackleford Trailhead. In addition, the Reynolds Cabin near Log Lake.</p> <p>Shackleford Trailhead is a major and highly used trail system into the Marble Mountain Wilderness. The trails are currently closed. Additional trails and recreational impacts would occur.</p> <p>Timber Vest is the main landowner in this area. High valued timber and economic loss is of major concern. If the fire were to breach this MAP, additional Timber Vest land would largely be impacted.</p> <p>Fish bearing streams that are habitat for Steelhead, Coho Salmon, and endangered aquatic species.</p> <p>Water quality impacts; including agriculture use and cultural uses of water in the area. Quartz Valley Indian Reservation cultural uses.</p> <p>Grazing allotments that are currently being used would be impacted.</p> <p>Probability of Success</p> <p>High.</p> <p>Fuels have been extremely dry and there has been active fire behavior. The fire is currently backing down near Shackleford Creek Trailhead area. Shackleford Creek has continuous fuels that go near the waterway; however, crews have improved the trail and road and have portable pumps to increase the likelihood of success. The likelihood of a slope over or spot fire is moderate and success of this MAP largely depends on success of catching any fire that crosses the MAP within one burn period.</p> | <p>Resources</p> <p>Resources to be determined by the IMT.</p> <p>Consequences of Not Taking Action</p> <p>A much larger and potentially a more expensive fire</p> <p>Increased firefighter exposure to the fire environment</p> <p>Closure to an access point, trail head, to the wilderness thus limiting recreational opportunities</p> <p>Private property damage and potential loss to structures.</p> <p>Impacts to water quality and water uses.</p> <p>Active range allotments would be impacted</p> <p>Longer period of poor air quality</p> <p>Notifications</p> <p>Agency Administrator</p> <p>Forest fire duty officer</p> <p>Resource advisors</p> <p>Siskiyou Sheriff</p> <p>California Highway Patrol</p> <p>Office of Emergency Services</p> <p>Community liaison</p> <p>Communities of Mill Creek, Quartz Valley and Kidder Creek</p> | |

|-----|---|---|--|------------------|
| 3 | <p>Log Fire – East Flank Dozer Line</p> <p>Condition</p> <p>If the fire is likely going to spread to this MAP; prepare all roads and create dozer lines to protect structures, infrastructure and damage to private property. The IMT is currently implementing this action.</p> <p>Location</p> <p>East of the fire’s current perimeter</p> <p>Dozer line from Shackleford Creek Road to Patterson Creek Road in relatively flat terrain.</p> <p>Management Intent</p> <p>The intent of this MAP is to initiate action to protect structures and infrastructure in the greater Quartz Valley area. This is the last MAP before entering into numerous structures and infrastructure. This MAP should be high priority.</p> | <p>Actions</p> <p>This action is currently being implemented</p> <p>Implement structure protection mitigation actions</p> <p>Use existing roads, instead of building new line, wherever possible</p> <p>Construct line from Shackleford Creek Road to Patterson Creek Road.</p> <p>Develop structure protection plans for structures in the affected area.</p> <p>Values to Protect</p> <p>Numerous structures and infrastructure including the greater areas of Quartz Valley, Kidder Creek and Patterson Creek.</p> <p>Probability of Success</p> <p>Moderate to High.</p> <p>The area is in the foothills of the steeper mountainous terrain. The gentle terrain will increase the likelihood of success. Current active fire activity and extremely dry fuels may test supression efforts.</p> | <p>Resources</p> <p>Resources to be determined by the IMT.</p> <p>Consequences of not taking action</p> <p>Fire could damage or destroy homes and other private property.</p> <p>Ingress and egress routes to residential areas would be compromised</p> <p>Tribal and cultural lands would be impacted</p> <p>Increased firefighter exposure to the fire environment</p> <p>Closure to an access point, trail head, to the wilderness thus limiting recreational opportunities</p> <p>Notifications</p> <p>Agency Administrator</p> <p>Forest fire duty officer</p> <p>Siskiyou Sheriff</p> <p>California Highway Patrol</p> <p>Red Cross</p> <p>Office of Emergency Services</p> <p>Community liaison</p> <p>A public meeting should be considered in any communities affected or potentially affected.</p> | |

|-----|---|--|---|------------------|
| 4V2 | <p>Log Fire – Mill Bluff to Emigrant Ridgeline</p> <p>Condition</p> <p>Fire crosses or is likely to cross Mill Creek (the fire has already slopped over Mill Creek, and the actions described in this MAP are being evaluation for implementation).</p> <p>Location</p> <p>South of the fire’s current perimeter</p> <p>Main ridge line that connects Mill Creek Ponds to Hays Peak and continuing down the main Emigrant ridgeline.</p> <p>Management Intent</p> <p>The intent of this MAP is to prevent fire to move to the east towards homes and private timberlands. In addition, impair recreational opportunities into the Marble Mountain Wilderness.</p> | <p>Actions</p> <p>Implement evacuation order (see separate plan)</p> <p>Prepare Kidder Creek Road for holding</p> <p>Provide structure protection, and develop structure protection and evacuation plans.</p> <p>Values to Protect</p> <p>Structures and infrastructure in the Mill Creek and Kidder Creek drainages.</p> <p>Fisheries and cultural values</p> <p>Timber Vest is the main landowner in this area. High valued timber and economic loss is of major concern. If the fire were to breach this MAP, additional Timber Vest land would largely be impacted.</p> <p>Probability of Success</p> <p>Low.</p> <p>The area from Mill Ponds to Hays Peak has a high likelihood of success. The ridge is barren/rocky and open in most cases. From Hays Peak and down the main Emigrant ridgeline has a low likelihood of success. There are some barriers to fire spread; however, areas of continuous fuels exist that may become problematic for holding this MAP. Significant amount of work/time would be needed to implement this MAP and success to implement putting this line in largely depends on when the fire crosses Mill Creek.</p> | <p>Resources</p> <p>Resources to be determined by the IMT.</p> <p>Consequences of Not Taking Action</p> <p>Fire would become a much larger and costly event.</p> <p>The fire could burn homes, infrastructure and cause property damage.</p> <p>Additional Timber Vest land would be impacted</p> <p>Air quality would likely stay poor for longer.</p> <p>More exposure for firefighting resources.</p> <p>Notifications</p> <p>Agency Administrator</p> <p>Forest fire duty officer</p> <p>Resource advisor</p> <p>Community liaison</p> | |

| 5V2 | <p>Log Fire – Kidder Creek</p> <p>Condition</p> <p>Prepare an indirect line – which may turn into the primary line if MAP 4 is breached.</p> <p>Location</p> <p>South of the fire’s current perimeter</p> <p>Kidder Creek or the trail system or the main road from Kidder Lake to MAP 3 “East Flank Dozer Line”.</p> <p>Management Intent</p> <p>The intent of this MAP is to eliminate spread to the South which would impact additional communities. In addition, impair recreation opportunities into the Marble Mountain Wilderess.</p> | <p>Actions</p> <p>Evacuation order for the Patterson Creek and Kidder areas</p> <p>Construct indirect line on ridge system to prevent fire spread to the south and east. Likely actions may include backing fire from the top of the ridge to the bottom to reduce fire intensity.</p> <p>Values to Protect</p> <p>Wilderness recreational opportunities (e.g. wilderness closures due to fire). Kidder Creek Trailhead is a major access point into Marble Mountain Wilderness.</p> <p>Structures and infrastructure, particularly at the lower portions of Kidder Creek and into Patterson Creek drainages.</p> <p>Probability of Success</p> <p>Moderate.</p> <p>Fuels have been extremely dry and there has been active fire behavior. The fire would likely flank or back into the Kidder creek drainage which is wet; however, continuous fuels go near the creek. The likelihood of a slope over or spot fire is moderate – leaving a likelihood of success to be moderate and depends largely on the success of resources to catch any fire that breaches the MAP.</p> | <p>Resources</p> <p>Resources to be determined by the IMT.</p> <p>Consequences of Not Taking Action</p> <p>A much larger and more expensive fire</p> <p>Economic loss to valued private timberlands.</p> <p>Loss of recreation opportunities due to trail closure</p> <p>Fire could burn homes, infrastructure and cause damage to private property.</p> <p>Air quality would likely stay poor for longer.</p> <p>Increased firefighter exposure to the fire environment</p> <p>Notifications</p> <p>Agency Administrator</p> <p>Forest fire duty officer</p> <p>Resource advisors</p> <p>Community liaison</p> | |

| MAP | Condition | Actions | Resources | Status Completed |
|-----|--|---|--|------------------|
| 20 | <p>Whites Fire – Russian Wilderness Ridge</p> <p>Condition The Russian Wilderness Ridge MAP has already been reached. The fire is near the edge of the main ridge in areas and is likely to spread toward the ridge in all other areas over time.</p> <p>Location East of the fire’s current perimeter Main Russian Wilderness Ridgeline from South Sugar Lake to Big Blue Lake; then the sub-ridge running from Big Blue Lake to Hogan Lake and down to Sawyers Bar Road.</p> <p>Management Intent The intent of this management action point is to prevent fire spread to the east which could potentially impact homes, private property, natural and cultural resources, and recreational opportunities within the Russian Wilderness.</p> | <p>Actions Scout and complete preparation of vegetation where natural barriers do not exist. The primary emphasis for this will be from Sawyers Bar Road to Hogan Lake.</p> <p>Values to Protect Structures and private property. This is the last major ridgeline prior to heading down into French Creek and Sugar Creek drainages – both containing private property and structures. Spotted owl cores and habitat Loss of recreation opportunities. Habitat for Coho salmon and other sensitive aquatic species, which could be degraded by increased siltation and turbidity, warmer water due to lost streamside vegetation, and changed water chemistry. Historic mining structures. Especially valuable concentrations exist in Eddy Gulch and at Rainbow Mine. Economic benefits of possible timber sales, and ecological benefits of possible timber sales and fuels treatments. The Eddy Gulch LSR project currently has signed NEPA and is ready for implementation (i.e. timber sales and prescribed fires). The Russian Wilderness contains a SIA for botanical species as well as a RNA for the most diverse coniferous forest in the world.</p> <p>Probability of Success Moderate to High. A high likely hood of success due to the amount of natural barriers in the Russian Wilderness. Moderate chance of success for the line from Hogan Lake to Sawyers Bar Road; and is largely contingent on having enough resources and time prior to arrival of fire.</p> | <p>Resources To be determined by the IMT.</p> <p>Consequences of Not Taking Action A much larger and more expensive fire Potential for private property damage and loss of structures Increased threat to natural, historic, and cultural resources Further closures and loss of recreational opportunities Grazing allotment impacts Loss of value to current and ongoing NEPA projects and investments Longer period of poor air quality Increased fire fighter exposure</p> <p>Notifications Agency Administrator Forest fire duty officer Resource advisors Community liaison</p> | |

| MAP | Condition | Actions | Resources | Status Completed |
|-----|---|---|--|------------------|
| 22 | <p>Whites Fire - Whites Gulch to Eddy Gulch Lookout</p> <p>Condition The Whites Gulch to Eddy Gulch Lookout MAP has already been reached. Although the fire is currently about 2.5 miles from this MAP, it is the next logical and major ridgeline feature to stop the fire moving west.</p> <p>Location West of the fire's current perimeter Ridge and road system from Sawyers Bar Road at Whites Gulch to Eddy Gulch Lookout.</p> <p>Management Intent The intent of this management action point is to suppress fire moving further west and into the community of Sawyers Bar. In addition, multiple concerns of valued timber investment; natural and cultural resources and domestic watershed to Sawyers Bar are at risk.</p> | <p>Actions Construct dozer line (utilize current road system where feasible) from Eddy Gulch Lookout to Sawyers Bar Road at Whites Gulch. Values to Protect: The greater community area of Sawyers Bar and Black Bear Ranch. Eddy Gulch Lookout. Benefits of possible timber sales and fuels treatments from the Eddy Gulch LSR and Jess NEPA projects. Spotted owl cores and habitat Domestic watershed for Sawyers Bar and Black Bear Habitat for sensitive and endangered aquatic species. High populations of noxious weeds in the area.</p> <p>Probability of Success High. The construction of line will have time to be implemented. There is good access for firefighting resources to take action.</p> | <p>Resources Resources needed will be determined by the IMT.</p> <p>Consequences of not taking action The fire could burn homes and other private property in the Saywers Bar and Black Bear Ranch areas. It could burn campgrounds, road access, Wild and Scenic River Corridor, domestic water-source, and active NEPA projects. Cultural, historic and natural resources could be negatively affected; including threatened and endangered species.</p> <p>Notifications Agency Administrator Forest fire duty officer Resource advisors Siskiyou Sheriff California Highway Patrol Office of Emergency Services Community liaison Eddy Gulch Lookout Sawyers Bar, Black Bear Ranch and nearby communities. A public meeting should be considered.</p> | |

| MAP | Condition | Actions | Resources | Status Completed |
|-----|---|---|--|------------------|
| 23 | <p>Whites Fire – Ridgeline from Eddy Gulch to South Sugar Lake</p> <p>Condition</p> <p>The Ridgeline from Eddy Gulch to South Sugar Lake is currently being used. The fire has hit this MAP line at the head of Six Mile Creek.</p> <p>Location</p> <p>of the fire's current perimeter (although there are currently slopovers across this MAP in the Sixmile Creek drainage, which are currently being suppressed using direct attack).</p> <p>Ridgeline from Eddy Gulch Lookout heading east to the 39N58 road; then to Russian Lake followed by South Sugar Lake.</p> <p>Management Intent</p> <p>The intent of this MAP is to prevent the fire to move South into a very large and major drainage of the South Fork Salmon River; which in turn would make the fire perimeter much larger and increase risk, concerns and firefighter exposure. If the fire were to cross this MAP, additional communities near Cecilville would be at risk as well as additional cultural resource and natural resource concerns would be highlighted.</p> | <p>Actions</p> <p>Utilize and improve existing trail systems, roads and natural barriers where possible. Construct line in all other areas.</p> <p>Values to Protect</p> <p>Structures and infrastructure (greater Cecilville community area); including campgrounds (Shadow Creek and Trail Creek)</p> <p>NEPA and timber value investment from NEPA projects (Eddy LSR and Petersburg Pine)</p> <p>Eddy Gulch lookout</p> <p>Grazing allotments</p> <p>Increased impacts to recreational opportunities and closures</p> <p>Impacts to Cecilville Road as a major ingress and egress route.</p> <p>Spotted owl cores and habitat</p> <p>Habitat for sensitive and endangered aquatic species.</p> <p>High densities of noxious weed populations, particularly at low elevations.</p> <p>Probability of Success</p> <p>Moderate.</p> <p>The fire has currently sloped over into Six Mile Creek. The likelihood of success of suppressing the slop over is currently moderate. Holding the remainder of the area is considered to be moderate due to areas of continuous fuels.</p> | <p>Resources</p> <p>Resources will be determined by the IMT.</p> <p>Consequences of Not Taking Action</p> <p>Fire would get established and start backing down towards the South Fork Salmon River. The area has communities and infrastructure. In addition, numerous cultural and natural resource concerns exist. Recreational opportunities and a range allotment would be impacted.</p> <p>Notifications</p> <p>Agency Administrator</p> <p>Forest Fire Duty Office</p> <p>Office of Emergency Services</p> <p>Siskiyou Sheriff</p> <p>California Highway Patrol</p> <p>Permittee of range allotment</p> <p>Community liaison</p> <p>Community of Cecilville</p> <p>Eddy Gulch Lookout</p> <p>Resource advisor</p> | |

| 39 | <p>Whites Fire – Specimen / Big Creek</p> <p>Condition Fire crosses MAP 28 between Tanner Peak and the North Fork of the Salmon River and threatens to cross MAP 38.</p> <p>Location Northwest of the fire’s current perimeter Starting from Road 40N42 following the ridge Northeast between Specimen Creek and Little Twin Creek to the North Fork of the Salmon River continuing Northeast then east along ridge to the North of Big Creek ending at Snoozer Ridge.</p> <p>Management Intent The intent of this MAP is to provide opportunities to contain the fire from further advancement into the Marble Mountain Wilderness.</p> | <p>Actions Construct fireline and prepare trail to serve as fireline in order to keep fire south and advancing further into the Wilderness.</p> <p>Values to Protect Spotted owl habitat Local income from outfitter-guide services in any areas closed to public access. Permittee Structures and private property at Mulebridge and Abbott Ranch Habitat for sensitive aquatic species Sensitive plant habitat</p> <p>Probability of Success Moderate.</p> <p>The Mulebridge trail system is a well establish trail and will serve as a tie-in to the ridgeline coming from the 40N42 Rd. Improvements and preparation to the trail system should provide for a moderate likelihood of success. There has been little fire history recorded east of this area and it is characterized by dense forested stands and under growth. The ridgeline Northeast and East of the trail has similar characteristics as to the West.</p> | <p>Resources Resources will be determined by the IMT.</p> <p>Consequences of Not Taking Action Fire would likely become established in the Wilderness which has limited recorded fire history. This could contribute to large fire growth due to dense tree composition and understory growth. Wilderness values and recreation opportunities could be compromised Abbott Ranch private property and structure could burn. Air quality would likely stay poor for longer in the North Fork of the Salmon River drainage due to heavy smoke production.</p> <p>Notifications Agency Administrator Forest fire duty officer Resource advisors Siskiyou Sheriff California Highway Patrol Office of Emergency Services Red Cross Community liaison Permittee of range allotment and area residences Notify Abbott Ranch private land owner</p> | |

| MAP | Condition | Actions | Resources | Status Completed |
|-----|--|---|---|------------------|
| 40 | <p>Whites Fire – Little North Fork / Sawyers Bar</p> <p>Condition Fire crosses MAP 23 with continued spread toward Sawyers Bar.</p> <p>Location West of the fire's current perimeter Starting at Little North Fork following the ridge to the South to 39N21 continuing to Blue Ridge Lookout and onto Black Bear Summit, MAP 24.</p> <p>Management Intent The intent of this MAP is to provide opportunities to contain the fire from further advancement West/Southwest toward Blue Ridge Lookout and Black Bear Summit.</p> | <p>Actions Utilize the existing network of roads, such as 40N46 and construct fireline on the ridge West of Jessups Creek to contain the fire spread. A contingency would also include considering building line South of Little North Fork, connecting existing roads to ridges ending at Black Bear Summit. Where feasible, promote backing fire rather than allow high intensity spread.</p> <p>Values to Protect Economic benefits of possible timber sales, and ecological benefits of possible timber sales and fuels treatments. Sales and low-intensity prescribed fires near the wildfire would not occur. Viability of sensitive plant populations. As an example, an uncommon lady's slipper grows in the area. Plantations, planted stands of timber trees, progeny site, and source for seed of rust-resistant sugar pines Campgrounds Blue Ridge Lookout including outbuildings Dispersed campgrounds Critical spotted owl habitat Deer winter range At Mud Lake, habitat for a shrimp, which is an isolated population far removed from the species' core range. Structures and private property Portions of the municipal watersheds for both Sawyers Bar and Forks of the Salmon Values related to the River Historic mining structures Habitat for sensitive aquatic species</p> <p>Probability of Success Moderate. There has been no significant fire in this area since 1987. Fuels are continuous and fire could grow significantly if established south of the North Fork Salmon River. The terrain is moderately accessible and is steep and rugged. On the other hand, some major ridgelines might be effective places to stop fire spread.</p> | <p>Resources Resources will be determined by the IMT.</p> <p>Consequences of Not Taking Action Larger and more costly fire Likely private property damage and loss of structures Increased threat to natural, historic, and cultural resources Loss of value to current and ongoing NEPA projects and investments Longer duration of poor air quality potential</p> <p>Notifications Agency Administrator Forest fire duty officer Resource advisors Siskiyou Sheriff California Highway Patrol Office of Emergency Services Red Cross Community liaison Community of Sawyers Bar. A public meeting should be considered. Godfrey Ranch, Blue Ridge Ranch, and Black Bear Ranch Eddy Gulch neighborhood Eddy Gulch Lookout</p> | |
