

Rocky Basin Rate Database for Isuite Version 10 2010

Instructions for loading RM/GB Master Rate Database for ISuite application Ver. 10.01.01

The Isuite master blank database version 10.01.02 contains default standard rates for county and State resources out of range for the RM/GB area. IMT's and users operating within the RM/GB areas for 2010 are asked to use RMGB-Ver-10! blank database found on the GACC website. This database does not contain any resources or incidents and can be used by ISuite Version 10 when establishing a new DB and incident. Updates to Isuite version changes will be posted as needed.

Download the RM/GB database encrypted file from a Rocky Basin GACC web site. The file must be moved or copied to your Isuite Program [C:\Program Files\Isuite\Database] database directory.

Open Isuite – Database Admin – Copy/Create New Database. Under *Database File: Search for and select the [RMGB-Ver-10!.mdf.gpg] database file. This will create a file path to the RM/GB blank database file (**pictured below**).

The screenshot shows a Windows-style dialog box titled "Copy Database". It has a blue title bar with standard window controls. The main area is light gray and contains two sections. The left section, "Database to Copy", has a "Name of Database to Copy:" label above a dropdown menu, a "Create New Database" button, a "*Database File:" label above a text box containing "C:\Program Files\Isuite\Database\RMGB-Ver-10!.mdf.gpg" and a browse button "...", and a "*Database Password:" label above a masked text box. The right section, "New Database", has a "*Database Name:" label above a text box, a "File Path of New Database:" label above a text box containing "C:\Program Files\Isuite\Database\", a "*Database Password:" label above a text box, and a "*Verify Password:" label above a text box. At the bottom right are "OK" and "Cancel" buttons.

The **password** to the database is the same character sting as the database name.
(RMGB-Ver-10!)

In "New Database" type the database name you want to create for your incident. Use your own unique password for the new database. Click OK. Your new database and incident will now be using the RM/GB blank database with local GACC rates based on ASC State and County invoices for R2 and R4. Document your new database name and password for your incident.
