The following outlook is made with the most recent weather data available on November 27, 2019. It is a general report intended to provide fire management personnel with an area wide outlook for November 27, 2019 to December 1, 2019. Due to the variability in the data and weather computer model limitations beyond this time period, it is important for the local fire manager to know their own area of responsibility.

The graphics below display the accumulated precipitation data over the preceding 7 and 14 days leading up to the morning of November 27, 2019. To the right of each graphic is a key displaying the color corresponding to precipitation amounts in inches and percent of normal. The 7 day total precipitation amount forecast from the morning of November 27 into the morning of December 4 is shown at the bottom left of this page. The WFAS Severe Fire Weather Potential Forecast is displayed on the bottom right.
