AREA OF RESPONSIBILITY

The Boise Interagency Dispatch Center continued its interagency success in providing safe, cost effective service for wildland fires within southwest Idaho for Boise District Bureau of Land Management, Boise National Forest, and Southwest Idaho Department of Lands. Listed below is the total acreage responsibility of Boise Interagency Dispatch Center and each agency's ownership and protection areas.

	OWNERSHIP ACRES	PROTECTION ACRES
BOISE DISTRICT BLM	3,826,190	6,479,855
BOISE NATIONAL FOREST	2,089,352	2,194,031

DISPATCH

DISPATCH PERSONNEL

The Boise Dispatch Center is operated with thirteen personnel: one Center Manager, two Assistant Center Managers, nine Initial Attack Dispatchers, and one Office Assistant. The Center Manager position serves as the primary floor supervisor and liaison with the duty officers. The primary duties of the Assistant Center Managers are Logistics and Intelligence and also covering the Center Manager duties when needed. Alan Mebane serves in the Logistics Assistant and the Intelligence Assistant was a new addition, Elise Hawes. Of the nine primary IA dispatchers, two are assigned as Aviation Dispatchers and one as Night dispatcher. Each dispatcher also has an area of responsibility which could include Bureau of Land Management, Southern Boise National Forest, Northern Boise National Forest or Southwest Idaho Forest Protective District.

There were several personnel changes and movement this year. The biggest movement was the retirement of our long term BLM dispatcher, Carol Field, in October. Carol had worked at Boise Dispatch for over 20 years and she will be greatly missed. We were able to fill

two positions in Regional Fire Hire with Andra Peterson from the Sawtooth National Forest as well as Tom Green from the Dixie National Forest. All of our seasonal staff returned, with one exception and we picked up Kelsey Kimber, from Elko Dispatch, to fill that position. They were great additions to our group. The office assistant position was filled by several rotating Centennial Job Corps students.

DISPATCH PERSONNEL

Local fire activity as a whole was below the ten year average for all three agencies. Logistically, our dispatch workload was average throughout the year, as nationally we spent a fair amount of time in Planning Levels 4 and 5 and supporting neighboring geographic areas, including a late season push in California. Steady initial attack activity began in June, as expected for the BLM, and had a few peak days of activity. The Forest had multiple Type 3 incidents mid-July and managed one large fire on the Lowman District with a NIMO Team. Dispatch went to seven day coverage on April 30th and continued through the first of October. The regular night shift started on June 18th and ended on October 1st. We opened expanded dispatch in June and closed it in October allowing for lots of opportunities for trainees to work on taskbooks. The Boise National Forest hosted two NIMO Teams and one Buying Team this season. The dispatch center hosted 8 Wildland Fire Apprentices each for 2 week assignments in either Initial Attack or Expanded Dispatch.

INCIDENT	IMT TYPE	IMT NAME	TEAM HOME UNIT
BEARSKIN	NIMO	QUESINBERRY	SOUTHERN AREA
BEARSKIN	NIMO	HAHNENBERG	NORTHWEST
BEARSKIN	BUYING TEAM	HAYCOCK	GREAT BASIN

Dispatch hosted numerous tours showing our Tier 3 dispatch center and its functionality. We hosted many different groups that included: IROC Project Developers, Irwin Testing Team, 80 Job Corp Students for Shadow Day, US AID groups multiple times, Boise District Resource Advisory Council, Office of Occupational Health and Safety Director, and Acting Assistant Secretary of Lands.

Dispatch staff watching the Total Eclipse in August. From right to left: Elise Hawes, Jill Leguineche, Ed Harper, Al Mebane, Tom Green, and Carol Field.

Gowan Thunder flying over Boise Interagency Dispatch Center in October.

WildCAD WORKLOAD REPORTS

Boise District BLM– All Incident Types

As the chart to the left shows, Wildfire (119) was by far the largest workload for the BLM. Aircraft Flight Following (19) came in a distant second.

Boise National Forest– All Incident Types

This pie chart and data show that Aircraft tracking (38) and Wildfire (31) accounted for half of the workload for the Forest Service. There were quite a few Smoke Checks (17) and False Alarms (11) in 2017.

WildCAD WORKLOAD REPORTS

Southwest Idaho Department of Lands– All Incident Types

Wildfire (18) was the biggest workload for IDL, False Alarms (07) being the 2nd most created incident.

All Agencies Combined– All Incident Types

Aircraft tracking (443) was the biggest workload, and resource orders (265) were second, with Wildfire (183) coming in third.

WildCAD WORKLOAD REPORTS

Aircraft

The chart above shows Boise Dispatches workload for Aircraft. The biggest workload was for the Boise Smokejumpers (119). A majority of this tracking was done during the spring, due to training and proficiency jumps that prepare them for the fire season. Our second largest workload is for Office of Aviation Services doing proficiency training with helicopter pilots.

Orchard Training Range

Orchard Training Range leases land from the Boise District BLM, so any fire that occurs within their protection area has to be recorded in the BLM 1202 Fire Reporting system because it burnt BLM owned land. This data is input by dispatch in the Fall. In 2017, there were 530 fires that burned 4,327 acres. These were all human starts caused by the military firing training activities.

FIRE ACTIVITY

HISTORICAL COMPARISONS - ALL AGENCIES

In 2017 Boise Interagency Dispatch Center dispatched a total of 168 wildland fire incidents for 60,208 acres. Both the amount of fires and acres are under the Southwest Idaho 10 year average of 204 incidents for 147,720 acres.

The table below shows this years amount of fires and acres broken out by protection agency and also Southwest Idaho as a whole and compares them to the 5 year(2013-2017), 10 year(2008-2017) and 25 year (1993-2017) averages.

	BOISE DISTRICT BLM		BOISE NATIONAL FOREST		SW IDAHO DEPT OF LANDS		BDC- SW IDAHO	
	FIRES	ACRES	FIRES	ACRES	FIRES	ACRES	FIRES	ACRES
2017	119	31,756	31	28,246	18	205	168	60,208
5 YR AVG	92	106,626	79	74,506	27	3,518	199	184,650
% OF 5 YR AVG	129%	30%	39%	38%	66%	6%	84%	33%
10 YR AVG	95	90,964	84	54,519	24	2,237	204	147,720
% OF 10 YR AVG	125%	35%	37%	52%	74%	9%	82%	41%
25 YR AVG	103	80,929	128	49,902	25	1,328	256	132,159
% OF 25 YR AVG	116%	39%	24%	57%	72%	15%	66%	46%

When compared to all time frames in the above table: The Boise District BLM was slightly above average for the number of fires but was considerably under average in acreage burnt. The Boise National Forest was below half the average number of fires and around half of the average acres burnt. Southwest Idaho Department of Lands was at nearly 70 percent of average for number of fires and well under the average number of acres burnt. Southwest Idaho, as a whole, was slightly under the average number of fires, and was under half of the average annual acreage.

The following table shows the last 10 years of fire data by protection agency compared to the 10 year average.

YEAR	BOISE DISTRICT BLM		BOISE NATIONAL FOREST		IDAHO DEPARTMENT OF LANDS	
	# OF FIRES	TOTAL ACRES	# OF FIRES	TOTAL ACRES	# OF FIRES	TOTAL ACRES
10 YR AVG	95	90,964	84	54,519	24	2,237

WORKLOAD

Boise Interagency Dispatch Center processed **21,669** resource orders for 2017. Below is a chart showing the breakdown of the type of work processed. By comparison, last year we processed **48,105** orders. The five year average (2013-2017) is **36,863** orders. An additional workload is rental vehicles, we processed **247** rental vehicle orders. UTF orders greater than 5 – HECM, DIVS, HMGB, EQTR, RADO, BCMG, TFLD, COMT, PIO2, FFT2, STCN, ATGS, ICT3, ENGB, and HEQB

LOCAL RESOURCE ACTIVITY

CREWS - IHC

The 2017 season started in the Southwest for both Boise IHC and Idaho City IHC. On June 6th Boise was committed to the Freeze 2 fire in Arizona while Idaho City was assigned to the Slim fire, also in Arizona. For the rest of the season, the crews were committed within the Great Basin due to high preparedness levels. Not until September were they allowed to go out of the GACC, with Boise IHC to Montana for the West Fork fire and Idaho City IHC to Oregon for the Whitewater and Horse Creek fires.

CREWS - Type 2 IA

The Type 2 Crews in our area are an essential part of our fire organization. Our area has four agency type 2 initial attack crews: Crew 3 out of Idaho City, Crew 5 off the Lowman Ranger District, and Crew 8 and Crew 9, which are a combined effort of Boise National Forest and Centennial Job Corp. We also dispatch two national contract IA crews from PatRick Environmental. Crew 39 from the Southern Idaho Correction Institute, sponsored by Idaho Department of Lands, is also a type 2 crew. They had off-unit assignments to Idaho, Utah, Nevada, Montana, and California. In December we also put together 2 regular T2IA crews to California.

PREVENTION & EDUCATION

BOISE DISTRICT BLM

In 2017, the Boise BLM MEP program was fully staffed; this allowed us to continue to be proactive with both the One Less Spark and Steppe Up campaigns while initiating new campaigns with BSU, Zamzow's and D&B. In addition, during the month of May, we continued to utilize the mantra; Plan, Prepare, Prevent, in cooperation with Wildland Fire Awareness Month (WFAM). This year, to enhance our education and promotion during WFAM, we teamed up with Idaho Firewise and local partners to present "Era of Megafires".

Excellent work continued with the 4th grade curriculum and was presented through 32 grade schools in the Boise School District. We also continued the development of the sagebrush steppe adaptation of the FireWorks! curriculum originally developed by the Rocky Mountain Research Station's Missoula fire lab. Additionally, the Junior Ranger book featuring Sammy Sage-Grouse was written and illustrated with trading cards to accompany the activity book. Multiple mitigation and education programs, events and displays were completed this year where we were able to educate and inform communities and the public. Below you will find some of the highlights of this year.

- A fire prevention night at the Boise Hawks minor league game was held on Opening Night and Smokey Bear baseballs were handed out to the first 1,000 fans.
- A fire prevention campaign started with BSU Athletic Department that included a photo shoot for a poster and calendar along with a booth at the homecoming football game.
- We continued our partnership with Boise City Libraries to include fire prevention/awareness information boards in the libraries.
- We started/renewed 5 CA grants.
- For the third year, the Boise and Twin Falls District and the Idaho State Office partnered to support prevention and education efforts during the Mountain Home Music Festival. This year we were able to staff a prevention and education booth INSIDE the event and talk directly with festival goers and provide education messages on the Jumbo Tron.

From left to right: Boise State Wide Receiver Cedrick Wilson, Boise State Head Coach Brian Harsin, BLM employee TJ Gholson, Boise State Wide Receiver A.J. Richardson

BOISE NATIONAL FOREST

Program Overview

- Abandoned/unattended campfires **337**
- Incident Reports **274**
- Violation Notices **11**
- Wildland Fire Investigations **43**
- Days on Fire Suppression **225**
- Days in Stage 1 Fire Restrictions **37**
- Public Assists **19**
- Public Contacts **30,530**

The year started with an abundance of mountain snow and full reservoirs. Summer progressed into the typical Southern Idaho pattern of July and August being dry and hot.... minus the lightning.

All District Patrols reported an increase in Forest visitors during the peak July early August time frame, then there was a slight drop off in use until the start of hunting season. The increasing population growth of both the Treasure Valley and Magic Valley is evident on most weekends.

The increase in forest visitors is directly related to the increased risk of unplanned, Human Caused fires. Stage 1 Fire Restrictions continues to be an important tool in minimizing one of the Forest leading causes of human activity fires: abandoned or unattended campfires. All District Prevention programs continue to have strong campfire safety and education focus during peak fire danger period. Patrols actively engaged visitors and checking campsites for potential escaped campfires. **337 abandoned or unattended campfires** were reported by District personnel this season.

Last season, the Forest identified a shortage of qualified Wildland Fire Investigators. The Forest's newly formed Boise National Forest Fire Prevention Committee, made this one of their higher priorities this season and started a shadowing/training opportunity with the Boise BLM Fire Investigation Program. Patrols from Lowman, Idaho City and Mountain Home completed 14 day assignments, resulting in the great progress towards having a qualified Investigator on each District. The plan is to continue this effort again in 2018.

District programs are continuing their community outreach using local school programs, parades, homeowner association meetings, Local Fire Department events and other special community events and festivals. Smokey Bear continues to be our star headliner for promoting our Wildland Fire Education message to many diverse groups.

FIRE DANGER RATING AREAS

A Fire Danger Rating Area (FDRA) is defined as a large geographic area relatively homogenous with respect to climate, vegetation and topography. Because of these similarities, it can be assumed that the fire danger within a FDRA is relatively uniform. Fire Danger Rating Areas were delineated based upon an analysis of these three factors: climate, vegetation, and topography. After these environmental factors were considered, the draft FDRAs were edge-matched to existing administrative boundaries using Response Areas.

Each FDRA uses RAWS (remote automated weather stations) to obtain the weather information needed to produce fire danger outputs. Each area uses the weather data compiled with either ERC (energy release component) (Boise Mountains) or BI (burning index) (Snake River Foothills and Owyhee Canyonlands) to measure critical burning conditions and set staffing levels. Below is a list of each area with the weather stations used. Some the stations used are not managed by BDC but are used due to completeness of data and overall topographic representation.

RAWS STATIONS USED FOR EACH FDRA

WEATHER

Boise National Weather Service

Winter 2016-2017

Information taken directly from the Boise Weather Service 2017 Fire Weather Annual Report

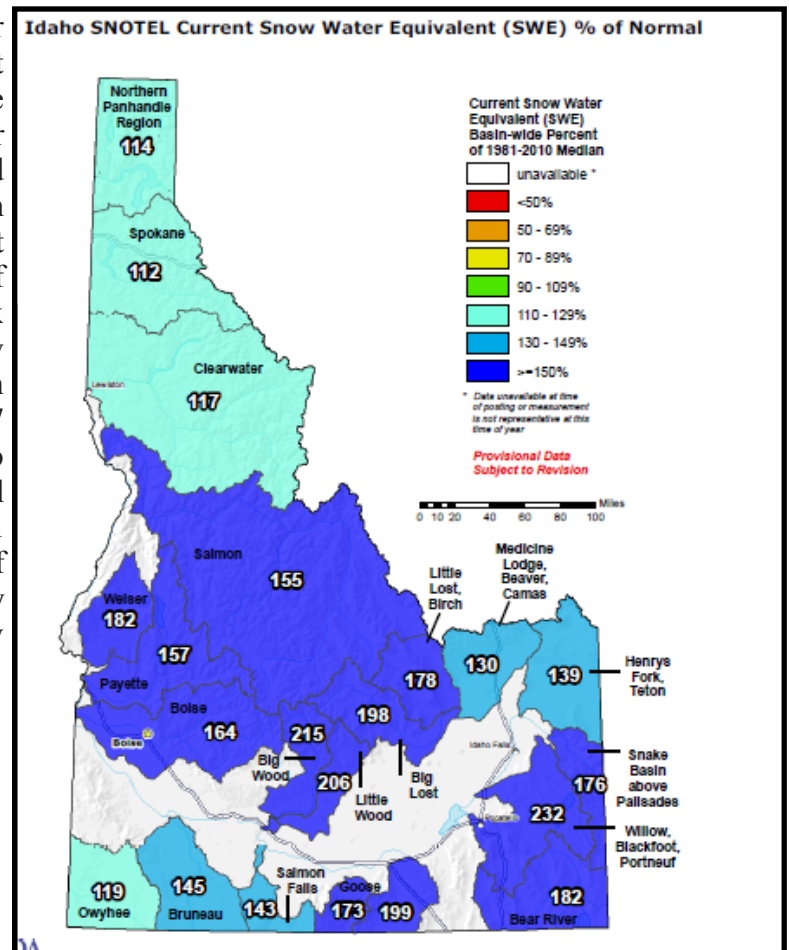

Last winter started with strong upper level ridging over the area, causing November to be one of the warmest and driest in 76 years. The weather pattern became more progressive in December, however, as the upper level ridge broke down and a series of waves pushed through the area. Temperatures alternated between above- and below-normal values during this time, but leveled off in mid-December when several inches of snow fell across the area. Later in the month, an influx of arctic air aided wintry conditions and lowered snow levels. A significant push of snow occurred on December 23rd and 24th, where an anomalous 7.7 inches of snow fell in Boise, pushing its snow depth to 9 inches by Christmas Day. By month's end, all local climate sites went on record with below normal temperatures and above normal precipitation; most of which fell as snow, even across lower valleys. Baker City reported an average temperature of 10.1 degrees below the monthly normal!

With this cold air then firmly in place, temperatures remained cold and subsequent rounds of January precipitation fell as snow at all elevations. In Boise, January was the snowiest (21.5") since 1983 (26.2") and the 16th coldest since records began in 1865.

Winter scaled back in February as west/southwesterly flow transported mild and wet conditions inland, generating three weeks of above normal temperatures and showery conditions. A more vigorous upper level trough moved into the area late in the month, bringing a more significant push of precipitation and forcing temperatures back below normal.

SPRING 2017

March brought even more precipitation, most of which was attributed to a potent Pacific storm that swung through the area late in the month. This storm dropped a whopping 1.40 inches of precipitation on Boise (mostly as rain) and helped increase regional snowpack tremendously. Despite significant precipitation, monthly mean temperatures remained above normal at many locations. The showery and progressive weather pattern continued in April with the addition of breezy winds typical of that time of year. By winter's end, snow-water-equivalent (SWE) values had far surpassed 30-year normal and the anomalous low-elevation snowpack had caused some serious issues region-wide. These issues included extreme runoff, significant flooding, and building damage. Dry conditions finally resurfaced in May, bringing the first month in sometime with below normal precipitation. (See above chart on SWE values for May 1st snowpack data)

Summer 2017

May’s dry conditions were relatively short-lived as June weather became increasingly progressive, alternating between frequent passages of troughs and ridges. Consequently, summer didn’t get underway until July, when a semi-permanent upper level ridge set up shop over the Intermountain West. As a result, several rounds of triple-digit highs were recorded across lower valleys, contributing to the above-normal mean temperatures at nearly all sites. Boise marked the second hottest July dating back as far as 1877. Monsoon moisture made its first significant appearance in July as well, with several days of thunderstorm development near and north of the Nevada border.

Hot and dry conditions persisted into August with a temporary break, in the form of an upper level trough from the Gulf of Alaska, occurring mid-month. Monsoonal moisture made a resurgence in late August, but wasn’t enough to bring widespread precipitation to the area.

Fall 2017

Warm, dry, and smoky conditions dominated the first half of September; quite typical for that time of year. A more progressive weather pattern developed mid- month, however, bringing cool and showery conditions that persisted through the end of September.

October proved more fall-like with frequent frontal passages and several rounds of precipitation. October temperatures were correspondingly cool with all sites reporting below-normal averages.

Spot Forecasts

NWS-Boise completed 334 spot forecasts this past year, a decrease from 2016. Of the 334 total spots completed, 124 were for prescribed burns and 210 were for wildfires. Similarly to 2016, the bulk of these spot forecast requests came from the Payette National Forest, 143 requests. The Boise National Forest requested 59 spots and South Idaho Dispatch requested 49 total spots.

Red Flag Warnings

NWS-Boise issued 48 Red Flag Warnings (RFWs) this fire season, the bulk of which were for lightning. Of these 48 warnings, 28 verified as a “hit” and 23 were recorded as a “miss”. Additionally, there were 5 fire weather events in which Red Flag conditions occurred, but no warning was issued. Compiling this information gives us a seasonal Probability of Detection (POD) of 0.85 and a False Alarm Rate (FAR) of 0.42. Our average lead time was 11.2 hours.

LIGHTNING SUMMARY

Boise District BLM

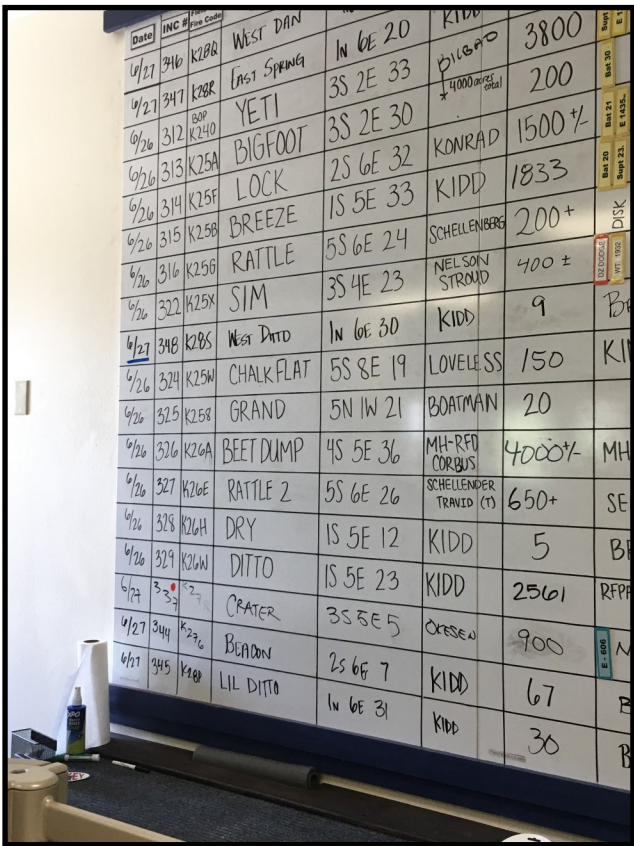

The first lightning fire on BLM was on May 30th, the COVE fire was 24 acres. June 26th was the first multiple lightning fire day with 11 fires located. This carried into June 27th, where 6 more lightning fires were found. The two day total acreage was 17,045 acres. There were 7 more days that multiple lightning fires were reported. The last multiple day for lightning fires occurred on September 13th, two fires, BLACK and MUSTANG, burnt 848 acres and 1038 acres respectively. There were 47 lightning fires for the season, burning 27,886 acres. In 2016, there were 9 lightning ignitions for 2,201 acres.

Boise National Forest

The first lightning fire on Forest protected land was June 26th, the WAGONTOWN fire was .25 acres. On June 27th there were multiple lightning ignitions, with 3 fires burning 1.75 acres. There were two other multiple ignition days in August with 2 fires each day. The largest lightning fire was the Bearskin fire that burned 28,052 of Boise National Forest protected land and 2,199 acres on the Salmon-Challis Forest. There were 18 lightning caused fires in 2017 for 28,142 acres. In 2016 there were 24 lightning fires for 5,411 acres.

Southwest Idaho Department of Lands

The first lightning fire for IDL protected lands occurred on June 27th, the SOLDIER fire was .1 acres. The only multiple start day was August 30th with 3 ignitions for 57.35 acres. The largest lightning fire was the SWEET fire that burned 51 acres. There were a total of 8 lightning fires on IDL protected lands for 82.25 acres. In 2016 there were 2 lightning fires for .7 acres.

BLM fire board during the June 26th-June 27th lightning bust.

FUEL MOISTURE

Snake River Foothills and Owyhee Canyonlands Areas

The Boise District BLM Fuels program collects the live fuel moisture data at five different locations throughout the district. The following is a chart of their readings which are color coded by expected fire behavior. From the Guidelines for Fire Behavior and tactics based on Live Fuel Moisture Values in the Great Basin Fuel Project as described below: Fuel moistures from 101-125% will exhibit high fire behavior with frontal attack with engines and/or dozers would be nearly impossible on large fires. All sites hit this level mid-July, and by mid-August, most sites had fuel moistures that are indicative of extreme fire behavior, which continued into September.

	4/1	4/15	5/1	5/15	6/1	6/15	7/1	7/15	8/1	8/15	9/1

BLACKSTONE AVG	156	200	182	177	157	115	77	67	60	71	80

GREEN: Very Low and Low Fire Behavior. BLUE: Moderate Fire Behavior. YELLOW: High Fire Behavior. ORANGE: Extreme Fire Behavior. RED: Advanced Fire Behavior.

FIRE BEHAVIOR AND TACTICS

Live Fuel Moisture

181% & Above - Fires will exhibit **VERY LOW BEHAVIOR** with difficulty burning. Residual fine fuels from the previous year may carry the fire. Foliage will remain on the stems following the burn. Fires can generally be attacked at the head or flanks by persons using hand tools. Hand line should hold fire without any problems. Fires will normally go out as soon as wind dies down.

151%-180% - Fires will exhibit **LOW FIRE BEHAVIOR** with fire beginning to be carried in the live fuels. Both foliage and stem material up to 1/4 inch in diameter will be consumed by the fire. Burns will be generally patchy with many unburned islands. Engines may be necessary to catch fires at the head and handling will be more difficult to construct, but should hold at the head and the flanks.

126%-150% - Fires will exhibit **MODERATE FIRE BEHAVIOR** with a fast continuous rate of spread that will consume stem material up to 2 inches in diameter. These fires may be attacked at the head with engines but may require support of dozers and retardant aircraft. Handline will become ineffective at the fire head, but should still hold at the flanks. Under high winds and low humidity, indirect line should be given considerations.

101%-125% - Fires will exhibit **HIGH FIRE BEHAVIOR** leaving no material unburned. Head attack with fire engines and dozers will be nearly impossible on large fires, but may still be possible on smaller, developing fires. Retardant aircraft will be necessary on all these fires. Flanking attack by engines and indirect attack ahead of the fire must be used. Spotting should be anticipated. Fires will begin to burn through the night, calming down several hours before sunrise.

75%-100% - Fires will exhibit **EXTREME FIRE BEHAVIOR**. Extreme rates of spread and moderate to long range spotting will occur. Engines and dozers may be best used to back up firing operations, and to protect structures. Indirect attack must be used to control these fires. Fires will burn actively through the night. Air turbulence caused by the fire will cause problems for air operations.

74% & Below - Fires will have **ADVANCED FIRE BEHAVIOR** with high potential to control their environment. Large acreage will be consumed in a very short time period. Backfiring from indirect line, roads, etc. must be considered. Aircraft will need to be cautious of hazardous turbulence around the fire.
