

**FIRE DANGER POCKET CARD**  
**EAST FIRE DANGER RATING AREA**  
 South Central Idaho Interagency Dispatch Center  
**SCAN QR CODE FOR DAILY INDICES:**

This pocket card was approved by the Sawtooth National Forest and Twin Falls BLM Fire Programs.

**ENERGY RELEASE COMPONENT**

- ERC is calculated from the 1300 RAWs daily observation of temperature, humidity, daily temperature & RH ranges, and precipitation.
- ERC has low variability and is the best fire danger component for indicating effects of intermediate to long-term drying on fire behavior. This index can serve as a good characterization of seasonal trends.
- Wind is **NOT** part of the ERC calculation.

**BURNING INDEX**

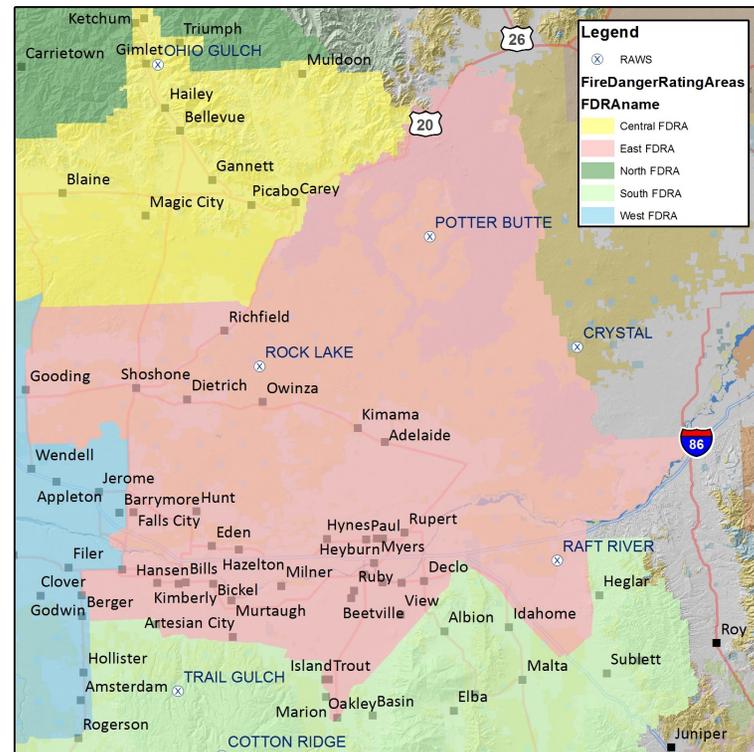

- BI gives day to day fluctuations calculated from the 1300 RAWs daily observation of temperature, wind, RH, daily temperature & RH ranges, and precipitation duration.
- Wind has a major influence on BI.
- BI is an estimate of the potential difficulty of fire control as a function of how fast and how hot a fire could burn.

**LOCAL THRESHOLDS: EAST FIRE DANGER RATING AREA**

- Critical Percentiles for ERC and BI were determined through historical fire analysis
- Any of combination of the following greatly increase the likelihood of extreme fire behavior:**
  - Temperatures above 90
  - RH below 20%
  - Eye Level Winds >10 mph
  - Haines Index of 5 or 6
  - Live Fuel Moisture (Sagebrush) of 120 or less
