

Area Command Team 2
Tim Sexton-Area Commander

April 24, 2020

TO: Paul Petersen – Great Basin Coordinating Group Chair

Attached is the Great Basin Wildland Fire Response Plan (WFRP). The WFRP was developed to mitigate the COVID-19 hazard to incident responders and is intended to be applicable from mobilization to de-mobilization. Area Command Team 2 appreciates the cooperation, meaningful feedback, and the time invested from the stakeholders in the Great Basin Geographic Area. Your support was invaluable in the development of the plan.

The WFRP is intended to be a living document managed by the Great Basin Coordinating Group. As new information becomes available, you should update the plan to meet your needs. I encourage you to establish a monitoring and updating process to keep the WFRP current. In the WFRP there is a section provided where updates and changes can be documented.

An electronic copy of your plan along with all the associated files has been placed in a SharePoint site hosted in FireNet (Office 365) called **2020_COVID-19_Geographic Area WFRP**. Your Geographic Area Plan and supporting documents are in the folder labeled with your geographic area name. Please provide the name/s of stewards from your Geographic Area who will be granted edit and owner permissions for your files. The files are set up so that a link to a pdf of your plan can be publicly shareable on your GACC website. Your steward/s will be able to republish updated versions of your plan should edits be needed.

On behalf of the entire Area Command Team 2, we appreciated the opportunity to work with you on this important project.

Regards,

Tim Sexton
