Prescribed Fires Planned for the Jackson Ranger District

Jackson Wyo, April 06, 2021— Beginning no earlier than April 12, 2021, the Jackson Ranger District of the Bridger-Teton National Forest will be moving forward with prescribed burn operations on four locations in the Teton to Snake Fuels Reduction Project area.

- Trail End Rd - located adjacent to the Trails End subdivision and west of Red Top Meadows subdivision.
- Taylor Mountain Unit 2 - located adjacent to the Highland Hills and Hidden Hills subdivisions.
- Mosquito Creek North - located approximately 3.5 miles up FS Road 980 (Mosquito Creek Rd), bordering the western edge of the 2001 Green Knoll Fire scar, with Black Canyon located to the north.
- Phillips Bench Units 2 and 7 -These are pile units that have piles remaining from fall of 2020 located on Phillips Ridge.

The Teton to Snake Fuels Reduction Project is designed to decrease the risk from unwanted wildfires that could impact communities in the wildland urban interface (WUI), specifically, Phillips Ridge, Fish Creek, Teton Village, Wilson, and the Fall Creek Corridor communities. Local homeowners also have a responsibility to decrease their risk by creating and maintaining defensible space on private property. Treatments, such as these, done before a wildfire starts, can provide firefighters the opportunity to minimize or mitigate impacts to private lands.

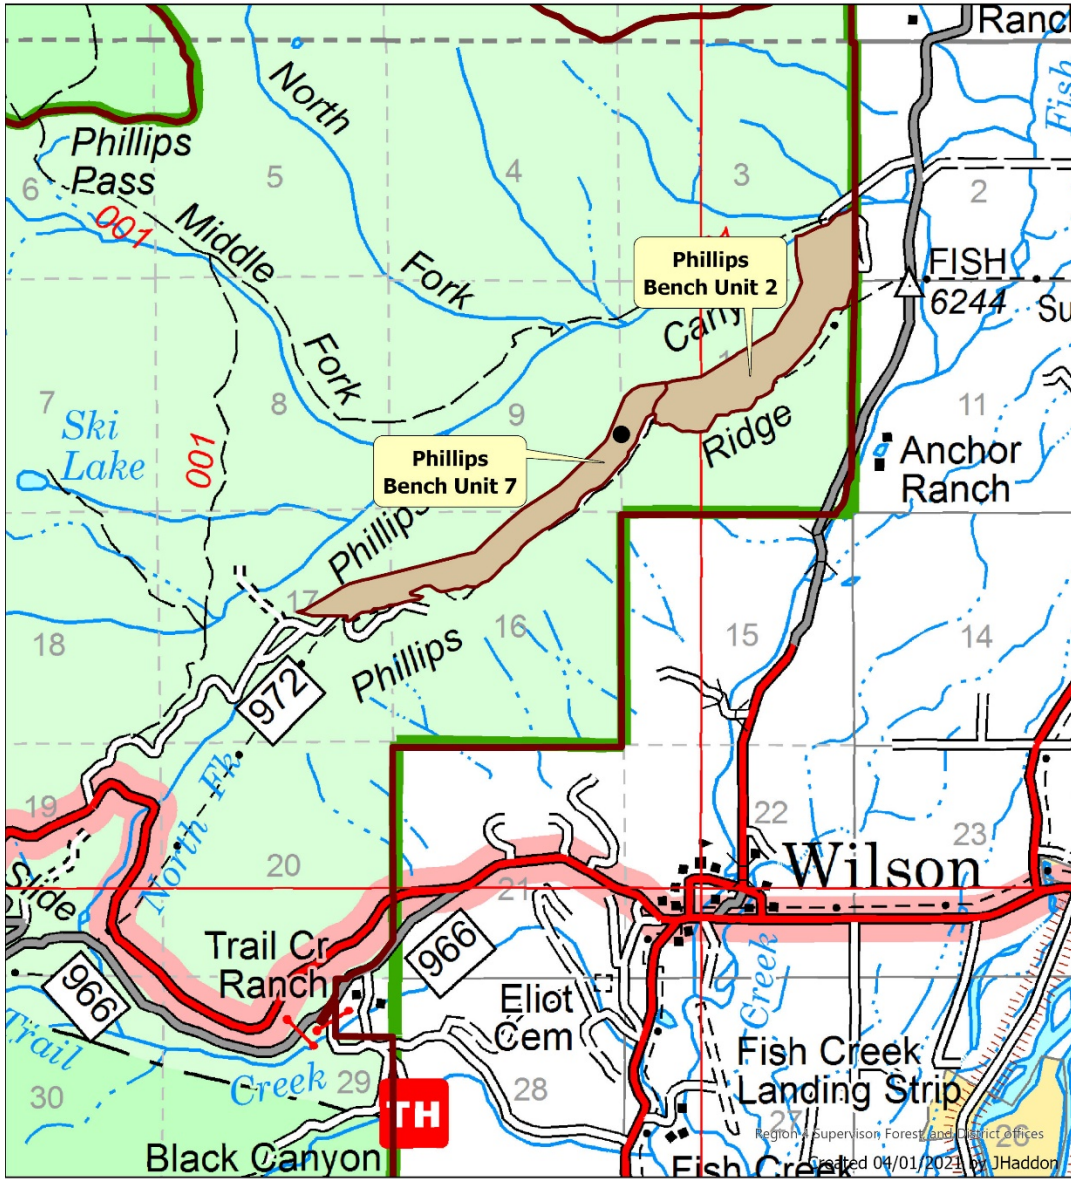

Prescribed fires are managed under a precise set of parameters know as a “prescriptions” which include overall project objectives, temperature, wind speed and direction, relative humidity, current and expected forecast, and fuel conditions, as well as available firefighting resources, and time of season. Before burning, fire managers ensure that all the parameters are within their prescribed fire plan so the operations can be conducted safely, and objectives can be met.

Fire management personnel will utilize both ground and aviation resources to safely conduct these prescribed fire operations. Smoke from these operations will be visible from around the valley and may continue for a few days after ignitions depending on the

environmental conditions and the intensity of the burn. Fire managers will be coordinating with Wyoming air quality and will monitor weather conditions closely in the days prior to, and during the prescribe fire ignitions. Firefighters will continue to work in the area several days after ignitions to patrol and manage for public safety.

Local notifications will take place as well as social media postings alerting the public when these burns will be implemented. For more information contact the Jackson Ranger District Fire Prevention Staff at 307-739-5424 or visit Tetonfire.com or follow the Bridger-Teton National Forest Facebook page.
