Wildland Fire Risk and Complexity Assessment

The Wildland Fire Risk and Complexity Assessment should be used to evaluate firefighter safety issues, assess risk, and identify the appropriate incident management organization. Determining incident complexity is a subjective process based on examining a combination of indicators or factors. An incident's complexity can change over time; incident managers should periodically re-evaluate incident complexity to ensure that the incident is managed properly with the right resources.

Instructions:

Incident Commanders should complete Part A and Part B and relay this information to the Duty Officer. If the fire exceeds initial attack or will be managed to accomplish resource management objectives, Incident Commanders should also complete Part C and provide the information to the Agency Administrator.

Part A: Firefighter Safety Assessment

Evaluate the following items, mitigate as necessary, and note any concerns, mitigations, or other information.

Evaluate these items	Concerns, mitigations, notes
LCES	
Fire Orders and Watch Out Situations	
Multiple operational periods have occurred without achieving initial objectives	
Incident personnel are overextended mentally and/or physically and are affected by cumulative fatigue.	
Communication is ineffective with tactical resources and/or dispatch.	
Operations are at the limit of span of control.	
Aviation operations are complex and/or aviation oversight is lacking.	
Logistical support for the incident is inadequate or difficult.	

Part B: Relative Risk Assessment

Values		Risk Rating			Notes/Mitigation
B1. Infrastructure/Natural/Cultural Concerns Based on the number and kinds of values to be protected, and the difficulty to protect them, rank low, moderate, or high. Considerations: key resources potentially affected by the fire such as urban interface, structures, critical municipal watershed, commercial timber, developments, recreational facilities, power/pipelines, communication sites, highways, potential for evacuation, unique natural resources, designated areas (i.e. wilderness), T&E species habitat, cultural sites.		L	M	H	
B2. Proximity and Threat of Fire to Values Evaluate the potential threat to values based on their proximity to the fire, and rank low, moderate, or high.		L Far	M	H Near	
B3. Social/Economic Concerns Evaluate the potential impacts of the fire to social and/or economic concerns, and rank this element low, moderate, or high. Considerations: impacts to social or economic concerns of an individual, business, community or other stakeholder; degree of support for the wildland fire program and resulting fire effects; other fire management jurisdictions; tribal subsistence or gathering of natural resources; air quality regulatory requirements; public tolerance of smoke, including health impacts; potential for evacuation and ingress/egress routes; and restrictions and/or closures in effect or being considered.		L	M	H	
Hazards					
B4. Fuel Conditions Consider fuel conditions ahead of the fire and rank this element low, moderate, or high. Evaluate fuel conditions that exhibit high ROS and intensity for your area, such as those caused by invasive species or insect/disease outbreaks; and/or continuity of fuels.		L	M	H	
B5. Fire Behavior Evaluate the current and expected fire behavior and rank this element low, moderate, or high. Considerations: intensity; rates of spread; crowning; profuse or long-range spotting.		L	M	H	
B6. Potential Fire Growth Evaluate the potential fire growth, and rank this low, moderate, or high. Considerations: Current and expected fire growth based on fire behavior analysis, weather forecast and/or ability to control the fire.		L	M	H	
Probability					
B7. Time of Season Evaluate the potential for a long-duration fire and rank this element low, moderate, or high. Considerations: time remaining until season ending event.		L Late	M Mid	H Early	
B8. Barriers to Fire Spread Evaluate the barriers to fire spread and their potential to limit fire growth, and rank this element low, moderate, or high. Considerations: If many natural and/or human-made barriers are present, rank this element low. If some barriers are present, rank moderate. If no barriers are present, rank high.		L Many	M	H Few	
B9. Seasonal Severity Evaluate fire danger indices and rank low/moderate, high, or very high/extreme. Considerations: Fire danger indices such as energy release component (ERC); drought status; live and dead fuel moistures; fire danger indices; adjective fire danger rating; geographic area preparedness level.		L/M	H	VH/E	
Enter the number of items circled for each column.					

Relative Risk Rating (circle one)	Low	Majority of items are "Low", with a few items rated as "Moderate" and/or "High."
	Moderate	Majority of items are "Moderate", with a few items rated as "Low" and/or "High."
	High	Majority of items are "High"; A few items may be rated as "Low" or "Moderate."

Part C: Organization

Circle the Relative Risk Rating (from Part B). **L M H**

Implementation Difficulty					Notes/Mitigation
C1. Potential Fire Duration Evaluate the estimated length of time that the fire may continue to burn if no action is taken and amount of season remaining. Rank this element low, moderate, or high. Note: This will vary by geographic area.	N/A Very Short	L Short	M	H Long	
C2. Incident Strategies (Course of Action) Evaluate the level of firefighter and aviation exposure required to successfully meet the current strategy and implement the course of action. Rank very low, low, moderate, or high. Consider the likelihood that those resources will be effective; exposure of firefighters; reliance on aircraft to accomplish objectives; and whether there are clearly defined trigger points.	Very Low	L	M	H	
C3. Functional Concerns Evaluate the need to increase organizational structure to adequately and safely manage the incident, and rank very low (minimal resources committed), low (adequate), moderate (some additional support needed), or high (current capability inadequate). Considerations: Incident management functions (logistics, finance, operations, information, planning, safety, and/or specialized personnel/equipment) are inadequate and needed; availability of resources; access to EMS support; heavy commitment of local resources to logistical support; ability of local businesses to sustain logistical support; substantial air operation which is not properly staffed; worked multiple operational periods without achieving initial objectives; incident personnel overextended mentally and/or physically; Incident Action Plans, briefings, etc. missing or incomplete; performance of firefighting resources affected by cumulative fatigue; and ineffective communications.	Very Low	L	M	H	
Socio/Political Concerns					Notes/Mitigation
C4. Objective Concerns Evaluate the complexity of the incident objectives and rank very low, low, moderate, or high. Considerations: clarity; ability of current organization to accomplish; disagreement among cooperators; tactical/operational restrictions; complex objectives involving multiple focuses; objectives influenced by serious accidents or fatalities.	Very Low	L	M	H	
C5. External Influences Evaluate the effect external influences will have on how the fire is managed and rank very low, low, moderate, or high. Considerations: limited local resources available for initial attack; increasing media involvement, social/print/television media interest; controversial fire policy; threat to safety of visitors from fire and related operations; restrictions and/or closures in effect or being considered; pre-existing controversies/relationships; smoke management problems; sensitive political concerns/interests.	Very Low	L	M	H	
C6. Ownership Concerns Evaluate the effect ownership/jurisdiction will have on how the fire is managed and rank this element very low, low, moderate, or high. Considerations: disagreements over policy, responsibility, and/or management response; fire burning or threatening more than one jurisdiction; potential for unified command; different or conflicting management objectives; potential for claims (damages); disputes over suppression responsibility.	Very Low	L	M	H	
Enter the number of items circled for each column.					

Part C: Organization (continued)

*Recommended Organization (circle one):

Type 5	Majority of items rated as “Very Low”; a few items may be rated in other categories.
Type 4	Majority of items rated as “Low,” with some items rated as “Very Low”, and a few items rated as “Moderate” or “High.”
Type 3	Majority of items rated as “Moderate,” with a few items rated in other categories.
Type 2	Majority of items rated as “Moderate,” with a few items rated as “High.”
Type 1	Majority of items rated as “High”; a few items may be rated in other categories.

** Indicators of Incident Complexity may be found in the IRPG, pgs. 10-11.*

Rationale:

Use this section to document the incident management organization for the fire. If the incident management organization is different than the Wildland Fire Risk and Complexity Assessment recommends, document why an alternative organization was selected. Use the “Notes/Mitigation” column to address mitigation actions for a specific element, and include these mitigations in the rationale.

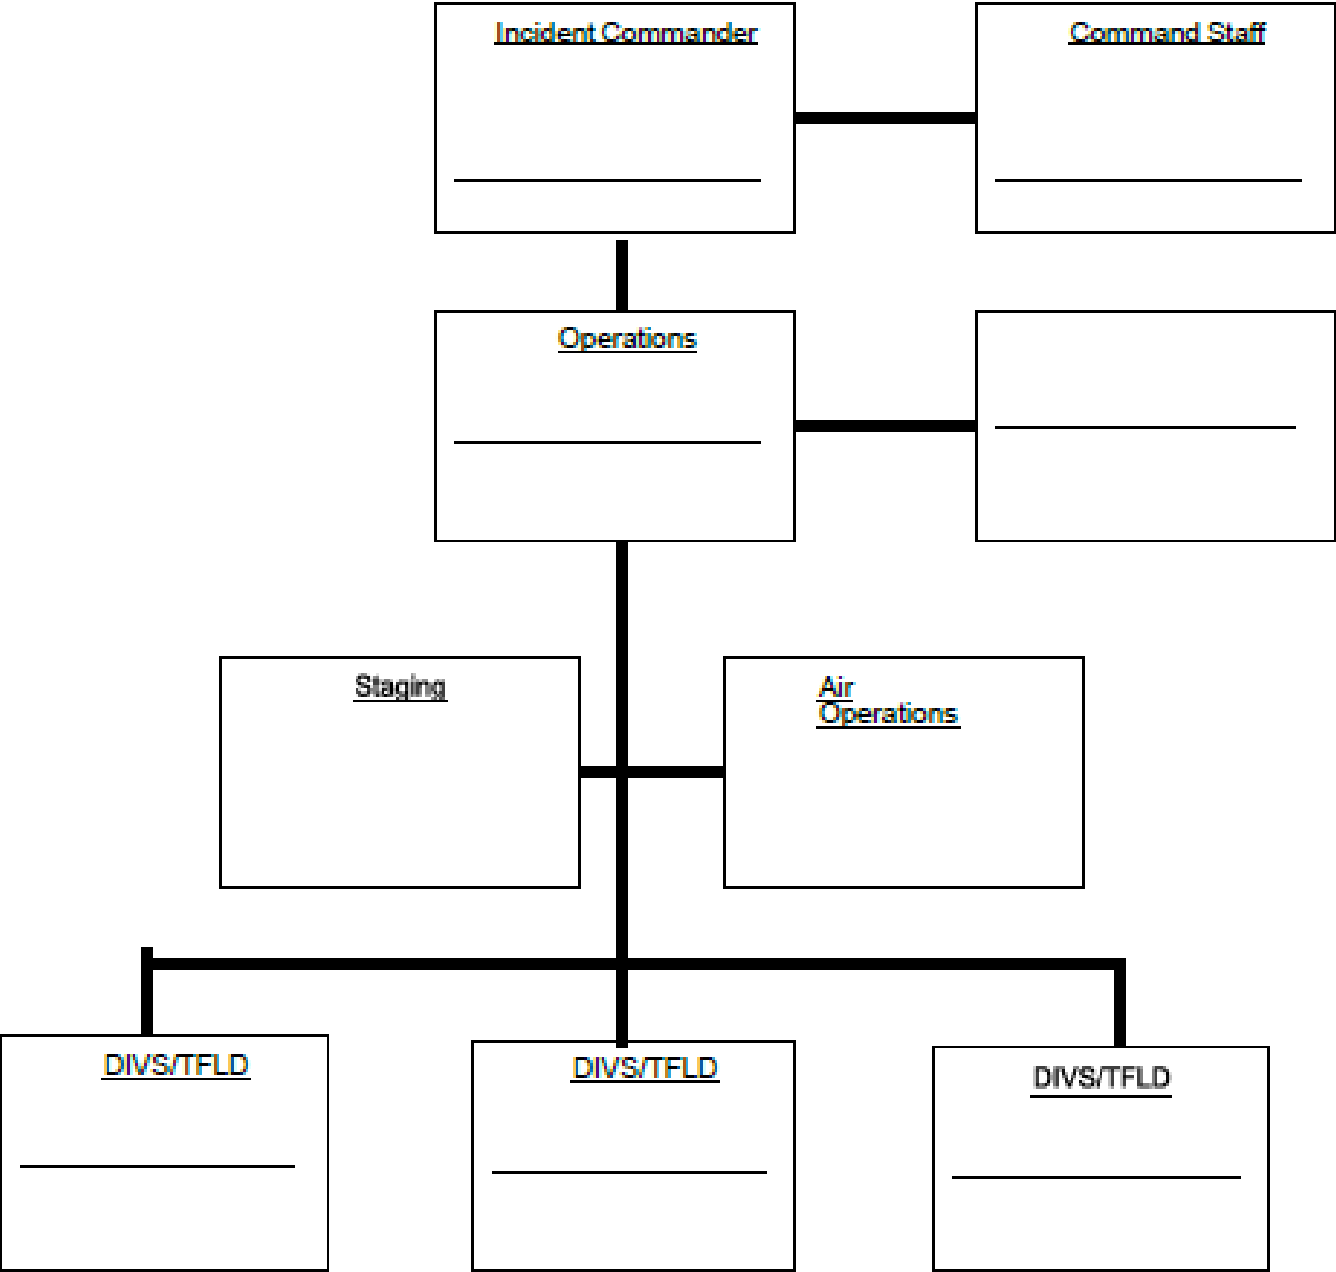

Name of Incident:_____ Unit(s):_____

Date/Time:_____Name/Signature of Preparer:_____

Incident Objectives
1. SAFETY of firefighters and public.
2.
3.
4.
Your goal is to manage the incident and not create another.

(Examples: Protect structures. Keep fire east of road, river or ridge.)

Work Rest Ratio Documentation Worksheet

This worksheet is designed to help the IC document and calculate amount of rest required to meet the Work/Rest guidelines.

- For every 2 hours of work or travel provide 1 hour of sleep or rest.
- IC must justify and document work shifts exceeding 16 hours and those that do not meet the 2:1 work/rest guidelines -- see below.

Date	Employee/Module Name Operational Period + Start Time	Employee/Module Name Operational Period - Stop Time	Total Hours Worked	Rest Time (document date/hours when employee or module rested)

Approval for shift lengths exceeding 16 hrs given by:	Date/Time approval given:
Duty Officer or Line Officer REQUIRED

2022 Incident Commander Delegation of Authority for Initial Attack and Emerging Fires and Expectations for all Firefighting Personnel

The COVID-19 pandemic has not ended, expect mitigations to be in effect in 2022 and expect that they may change during the season. In the past two seasons we have learned many lessons and adapted our incident response accordingly. Many of these adaptations will be carried into the future regardless of COVID risk. Risk management for every fire will be conducted and operational response may be modified if hazards cannot be reasonably mitigated. Risk will also be continually mitigated for both COVID and fire response.

Initial response to wildland fire on all jurisdictions is based on implementation of land management objectives, while applying risk management principles in consultation with Agency Administrators (AA) and Fire Duty Officers (DO). IC's shall understand AA and DO intent and assure that assigned fire personnel understand that intent. IC's and assigned personnel should continually assess the effectiveness of the selected strategies and tactics; and to Stop, Think, Talk and then Act to implement the leader's intent or to apply mitigations as needed.

Our intent is to engage in discussions about acceptable levels of risk. The management of wildland fires is an inherently risky endeavor that takes place in an environment ripe with objective and subjective hazards (aviation, vehicle operations, long hours, etc.). Undertaking operations in harsh terrain, during severe weather and in forests with snags, and the nature of fire operations (aviation, vehicles, long hours) all contribute to the hazards. These hazards will be addressed during the risk management process and have mitigations applied to reduce the level of acceptable risk for that incident. Risk will remain and will need to be constantly assessed.

Our goal is to have a common understanding of what level of residual risk is acceptable based upon the values determined to be at risk. This is what is meant when we speak of sharing risk. Your risk analysis should carefully consider the severity, probability and exposure components of identified hazards. Use the Risk Management protocols outlined in the IRPG to help you and your crew in these honest, open discussions. Higher levels of risk are acceptable when the values at risk are important to us. Simply put, human life has a higher value than a stand of trees. That being said, we will manage fires burning in forested areas – however our decisions to accept risk after applying mitigations should and need to be different in this scenario.

Of course, difficult decisions lie between these two options. Agency Administrators put a great deal of faith and trust in fire management personnel. We feel that the best information regarding assessing hazards and determining appropriate mitigations comes from those closest to the operation. Our role is to lead the discussion in setting priorities among the values-at-risk with DO's and IC's.

We expect that all personnel will work in a professional manner to ensure appropriate representation of our agencies. Foster a learning culture and an atmosphere free of discrimination, sexual harassment and other forms of inappropriate behavior. This includes taking proactive steps to ensure that people feel they belong to the organization.

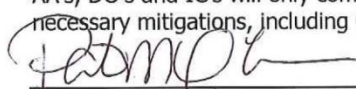

IC's shall ensure personnel assigned on their incident are only assigned to Fireline positions for which they are qualified by their employing agency. Ensure that trainees have a qualified trainer.

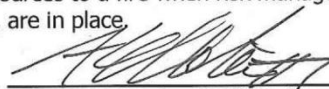

Ensure that all incoming resources as well as those already on the fire receive briefings. Include an emphasis on safety related to local conditions and any out-of-the ordinary risks. Implementation of proper food storage policies/procedures will be followed.

IC's are responsible to update TIDC and the DO every morning and afternoon on the status of the incident. Immediate notification will be made for any significant changes in fire behavior, conditions, and all injuries or accidents.

Utilize the Incident Organizer, conduct AAR's and compile all information necessary for required agency fire reports for all fires. Protection of life and safety of the public and emergency responders is the most important objective of every fire.

AA's, DO's and IC's will only commit resources to a fire when risk management assessments have been completed and necessary mitigations, including COVID, are in place.

INCIDENT STATUS SUMMARY (ICS-209)

The Incident Commander is responsible to provide Teton Dispatch and/or the Zone Duty Officer with enough information to submit an ICS-209, for Fires >100 acres in Timber, >300 acres in Grass/Brush or fires managed for other than a full suppression strategy.

Key information to communicate:

- Size/Area involved (growth since last report)
- Threats in the next 24 hours
 - Life / safety -- any evacuations in progress or planned?
 - structures threatened, type – primary residences, outbuildings, cultural/historic?
 - critical infrastructure, powerlines, energy development, communications towers/repeaters?
- Critical Resource Needs
- Observed fire behavior
- Actions planned for next operational period
- Any significant event or change that has occurred or is expected to occur (ie. medical, land ownership, or management strategy)

Information should be provided to TIDC by 1800 hrs, **PLAN AHEAD!** Communicate with the Duty Officer and TIDC to develop a strategy to submit a 209 to meet timing and reporting requirements.

LOGISTICS

- Food: 1 case MRE's/day for 4 people **OR** 5 cases/day for a 20 person crew
- Water: 1 cubie/day for 4 people **OR** 5 cubies/day for a 20 person crew
- Fuel: Portable pumps: 5 gal will run for 4 hours. Chainsaws: 1 gal for 4 hours / 1 qt oil for 2 hours.

FIRE DANGER -- Wind

Fire Danger Area:

- Wind FDRA
- NWS Zone 416
- RAWS 481309/481307
- * Meets NWCG Wx Station Standards

Fire Danger Interpretation:

- EXTREME** -- Use extreme caution
- High** -- Watch for change
- Moderate** -- Lower Potential, but always be aware

Maximum -- Highest Energy Release Component by day for 2006 - 2020
 Average -- shows peak fire season over 15 years (2295 observations)
 90th Percentile -- 10% of the 2295 days from 2006 - 2020 had an Energy Release Component above 44

Local Thresholds - Watch out:

Combinations of any of these factors can greatly increase fire behavior:
 20' Wind Speed over 20 mph, RH less than 17%,
 Temperature over 85, 1000-Hour Fuel Moisture less than 12
 Woody Fuels less than 90% Herbaceous Fuels less than 80%

Years to Remember: 2007 2008

Remember what Fire Danger tells you:

- ✓ Energy Release Component gives seasonal trends calculated from 2 pm temperature, humidity, daily temperature & rh ranges, and precip duration.
- ✓ Wind is NOT part of ERC calculation.
- ✓ Watch local conditions and variations across the landscape -- Fuel, Weather, Topography.
- ✓ Listen to weather forecasts -- especially WIND.

Past Experience:

New Fork - 2008 Winds aligned with topographical features to allow for large fire growth the first few burn periods. The fire burned through beetle killed lodgepole pine. Monsoon was predominantly dry allowing 1000 hr fuels to dry at an accelerated rate leading up to the fire.

Salt Lick - 2007 Large fire growth occurred with wind and drainage alignment. The fire burned a majority of the South Gypsum Creek drainage in half of a burn period.

FIRE DANGER -- Wyoming

Fire Danger Area:

- Wyoming FDRA
- NWS Zone 414
- RAWS 481208/481302/481306
- * Meets NWCG Wx Station Standards

Fire Danger Interpretation:

- EXTREME** -- Use extreme caution
- High** -- Watch for change
- Moderate** -- Lower Potential, but always be aware

Maximum -- Highest Energy Release Component by day for 2006 - 2020
 Average -- shows peak fire season over 15 years (2295 observations)
 90th Percentile -- 10% of the 2295 days from 2006 - 2020 had an Energy Release Component above 47

Local Thresholds - Watch out:

Combinations of any of these factors can greatly increase fire behavior:
 20' Wind Speed over 20 mph, RH less than 17%,
 Temperature over 85, 1000-Hour Fuel Moisture less than 12
 Woody Fuels less than 90% Herbaceous Fuels less than 80%

Years to Remember: 2012 2018

Remember what Fire Danger tells you:

- ✓ Energy Release Component gives seasonal trends calculated from 2 pm temperature, humidity, daily temperature & rh ranges, and precip duration.
- ✓ Wind is NOT part of ERC calculation.
- ✓ Watch local conditions and variations across the landscape -- Fuel, Weather, Topography.
- ✓ Listen to weather forecasts -- especially WIND.

Past Experience:

Fontenelle - 2012 the warmest summer on record for WY. Very warm, dry and extremely windy May and June led to accelerated drying of 1000 hr fuels. Live fuels in drought stressed conditions and high winds led to very large fire growth.

Roosevelt - 2018 Mid-September approaching record ERC's. All fuel types receptive including sage/grass. Wind alignment in the South Fork of the Upper Hoback River Drainage led to very large fire growth over several consecutive red flag burn periods.

Teton Interagency Zone Pocket Cards (by FDRA, 2021)

FIRE DANGER -- Teton

Fire Danger Area:

- Teton FDRA
- NWS Zone 415
- RAWS 480708/481307/481302
- * Meets NWCG Wx Station Standards

Fire Danger Interpretation:

- EXTREME** -- Use extreme caution
- High** -- Watch for change
- Moderate** -- Lower Potential, but always be aware

Maximum -- Highest Energy Release Component by day for 2006 - 2020

Average -- shows peak fire season over 15 years (2295 observations)

90th Percentile -- 10% of the 2295 days from 2006 - 2020 had an Energy Release Component above 44

Local Thresholds - Watch out:

Combinations of any of these factors can greatly increase fire behavior:

20' Wind Speed over 20 mph, **RH** less than 17%,

Temperature over 85, **1000-Hour Fuel Moisture** less than 12

Woody Fuels less than 90% **Herbaceous Fuels** less than 80%

Years to Remember: 2012 2016

Remember what Fire Danger tells you:

- ✓ Energy Release Component gives seasonal trends calculated from 2 pm temperature, humidity, daily temperature & rh ranges, and precip duration.
- ✓ Wind is NOT part of ERC calculation.
- ✓ Watch local conditions and variations across the landscape -- Fuel, Weather, Topography.
- ✓ Listen to weather forecasts -- especially WIND.

Past Experience:

Bear Cub and Horsethief- 2012 The warmest summer on record for WY. The Bear Cub fire started in early July Horsethief in early September. Other large fires burned actively into October.

Berry Fire - In 2016 late August the Berry Fire had spread events of 5 and 7 miles respectively under warm, dry conditions with wind. ERC values at Grand Teton RAWS were above the 90th Percentile for each event.

After Action Review

The climate surrounding an AAR must be one in which the participants openly and honestly discuss what transpired, in sufficient detail and clarity, so everyone understands what did and did not occur and why. Most importantly, participants should leave with a strong desire to improve their proficiency.

- An AAR is performed as immediately after the event as possible by the personnel involved.
- The leader's role is to ensure skilled facilitation of the AAR.
- Reinforce that respectful disagreement is OK. Keep focused on the *what*, not the *who*.
- Make sure everyone participates.
- End the AAR on a positive note.

What was planned?

What actually happened?

Why did it happen?

What can we do next time? (Correct weaknesses/sustain strengths)

A lesson acknowledged or shared is not a Lesson Learned. Commit to learning from these reviews!

Ensure this Incident Organizer is submitted to the appropriate Zone Duty Officer with the AAR.

Medical Incident Report

FOR A NON-EMERGENCY INCIDENT, WORK THROUGH CHAIN OF COMMAND TO REPORT AND TRANSPORT INJURED PERSONNEL AS NECESSARY.

FOR A MEDICAL EMERGENCY: IDENTIFY ON-SCENE INCIDENT COMMANDER BY NAME AND POSITION AND ANNOUNCE "MEDICAL EMERGENCY" TO INITIATE RESPONSE FROM IMT COMMUNICATIONS/DISPATCH.

Use the following items to communicate situation to communications/dispatch.

- CONTACT COMMUNICATIONS / DISPATCH** (Verify correct frequency prior to starting report) *Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."*
- INCIDENT STATUS:** Provide incident summary (including number of patients) and command structure. *Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat. / Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."*

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE . <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heart stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° – 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport. <i>Ex: Sprains, strains, minor heat-related illness.</i>	
Nature of Injury or Illness & Mechanism of Injury		<i>Brief Summary of Injury or Illness (Ex: Unconscious, Struck by Falling Tree)</i>
Transport Request		<i>Air Ambulance / Short-Haul/Hoist/ Ground Ambulance / Other</i>
Patient Location		<i>Descriptive Location & Lat. / Long. (WGS84)</i>

Incident Name	<i>Geographic Name + "Medical" (Ex: Trout Meadow Medical)</i>
On-Scene Incident Commander	<i>Name of on-scene IC of Incident within an Incident (Ex: TFLD Jones)</i>
Patient Care	<i>Name of Care Provider (Ex: EMT Smith)</i>

- INITIAL PATIENT ASSESSMENT:** Complete this section for each patient as applicable (start with the most severe patient).

Patient Assessment: See IRPG page 106
Treatment:

- TRANSPORT PLAN:**

Evacuation Location (if different): (Descriptive Location (drop point, intersection, etc.) or Lat. / Long.) Patient's ETA to Evacuation Location:
Helispot / Extraction Site Size and Hazards:

- ADDITIONAL RESOURCES / EQUIPMENT NEEDS:**

Example: Paramedic/EMT, Crews, Immobilization Devices, AED, Oxygen, Trauma Bag, IV/Fluid(s), Splints, Rope rescue, Wheeled litter, HAZMAT, Extraction

- COMMUNICATIONS:** Identify State Air/Ground EMS Frequencies and Hospital Contacts as applicable.

Function	Channel Name/#	Receive (RX)	Tone/ NAC*	Transmit (TX)	Tone/ NAC
COMMAND					
AIR-TO-GROUND					
TACTICAL					

- CONTINGENCY:** Considerations: If primary options fail, what actions can be implemented in conjunction with primary evacuation method? Be thinking ahead.

- ADDITIONAL INFORMATION:** Updates/Changes, etc.

REMEMBER:

- Confirm ETA's of resources ordered.
- Act according to your level of training.
- Be Alert. Keep Calm. Think Clearly. Act Decisively.
