

Monument Ridge Prescribed Burn

Monument Ridge Vegetation and Recreation Management

Big Piney Ranger District
Bridger-Teton National Forest
U.S. Department of Agriculture

Location: Bondurant, Wyoming
Date: Late May to late June 2024, as conditions allow
Size: 2150 Acres
Fuel types: Sage, grass, mixed conifer, and aspen, standing dead and down timber.

Description: This burn unit is part of the Monument Ridge Vegetation and Recreation Management project proposed by the Sublette County collaborative to address the hazards and threat from wildfire.

Within the project treatment area, there are two distinct treatment types, broadcast prescribed burning and slash pile burning.

Purpose: Reduce the potential threat to communities from wildfire by creating defensible space. Improve safety and access. Improve wildlife habitat.

The burn will also benefit aspen stands by creating a disturbance, encouraging aspen to sprout, and reduce conifer encroachment.

Closures: There is an Area/Road/Trail Closure Order in effect. See Closure Order and Map for details.

Thank-you to the Bondurant and Hoback communities for the support with maintaining healthy forests, diverse wildlife habitat, and sustaining healthy forests and fire resilient landscapes
