Notes of Significance

Evening Brief

Date/Time Stamp: **Wednesday, August 10, 2016 - 10:47 PM**

Weather Summary

On Wednesday, winds will decrease across the area. However, a weak frontal band will develop across northern Nevada and southern Idaho and trigger afternoon thunderstorms across a small area of NE NV and NW UT late Wed and possibly into Thu. Not much moisture would accompany these storms and so High Risk for Dry Lightning has been issued.

Elsewhere, wet thunderstorms expected across southern Utah and the Arizona Strip Wed-Thu. Fuel moisture is quite high in these areas and significant fire activity is not expected there.

High pressure will build Friday through this coming weekend leading to a warming/drying trend, with generally light and terrain driven winds across the region.

Preparedness Levels

Current:

Great Basin	4
National	3

Great Basin Fire Activity: Light Initial Attack

New Fires and Acres: 14 fires for 803 acres / 2,010 acres Large Fire Growth

Great Basin Fire Potential Summary

ERCs which have decreased across northern areas due to recent thunderstorms, will begin rising again as drier/breezy conditions develop across the region. The driest fuels remain over NW NV, in the **90th to 97th percentile**, while ERC's across much of the Nrn fringe of our region along the Salmon River into Ern ID and Wrn WY have dropped down to between the 60th-70th percentiles.

ERC's remain near or below the 50th percentile across Srn UT and the AZ Strip, where no large fire potential is expected in the near future.

Fuels in the southern half of the Idaho National Forests down into the Snake River Plain and far northern Nevada and Utah where ERC's are generally between the 80th and 90th percentiles. Additionally live fuels are down at critically dry levels in this same area. Weather conditions in these areas could lead to new fire starts from lightning holdovers, and rapid growth with winds of 25-35 mph in many of these areas.

Resources:

- Orders Pending
 - 15 Crew Orders
- 88 Aircraft Assigned
 - 23 Type 1 & Type 2 Helicopters Assigned to incidents
 - 9 Type 2
 - 14 Type 1
- 107 Crews Assigned
 - 21 IHCs Assigned to incidents in the Great Basin
 - 54 Crews Assigned within Boise Dispatch
- 220 Engines Assigned within the Great Basin
 - 12 Assigned to GACC Support
- National and initial attack resources within the Great Basin are heavily committed. Competition for resources is substantial.
