*** Notes of Significance ***																		
South Fork Zone consists of 3 fires on the Caribou-Targhee National Forest Black, Carrot, and Big Elk.																		

Evening Brief

Date/Time: **Wednesday, August 31, 2016 - 9:22 PM**

Weather Summary

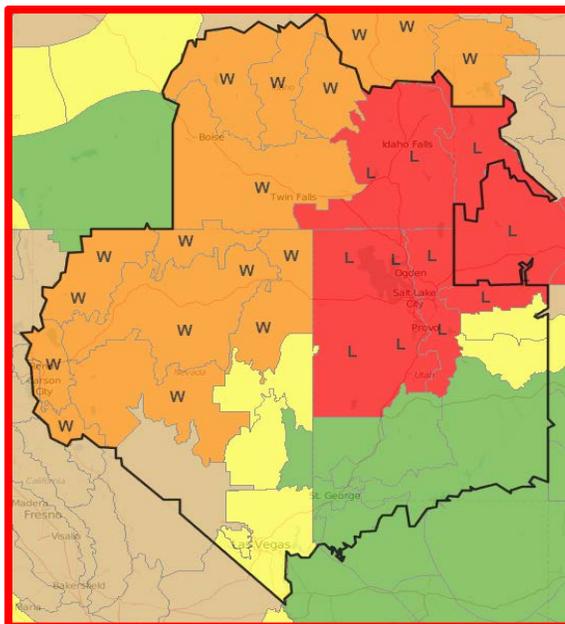

*** **HIGH RISK for LIGHTNING WEDNESDAY/THURSDAY for NORTHEAST NEVADA...NORTHERN UTAH...CENTRAL/EASTERN IDAHO...WESTERN WYOMING** ***

*** **HIGH RISK for WIND/LOW RH IDAHO and NORTHERN NEVADA WED/THU** ***

As a slow moving low pressure system approaches from the Pacific NW, along with a cold front...winds will start to increase today across western ID. **High Risk** has been issued for parts of ID where winds might be strongest today.

At the same time, **scattered thunderstorms with gusty winds** are now expected to form across NE NV into eastern ID late today. **Thunderstorms could continue overnight** into Thursday morning over parts of ID. These thunderstorms will likely be fast moving, with only light amounts of precipitation expected on Wednesday and Wednesday night. **High Risk** has been issued for these areas. Thunderstorms will spread eastward Thursday over northern UT...southeast ID and western WY. Humidity could be somewhat higher with possibly some low end wetting rains, but still with drier strikes in-between, in areas of near record dry fuels so **High Risk** remains in effect for these areas. There will still be a threat of new starts and spread on Thursday as southwest winds also remain breezy. **High Risk for Winds/Low RH** continues Thursday (see map).

There will also be a significant cooling trend behind the front into the weekend across the northern half of the Great Basin where temperatures will drop to 5-10 degrees below normal. Wetting rains possible over the mountains of central ID into western WY. Further south remaining seasonably dry with still some gusty southwest winds.

Great Basin Fire Activity: Light Initial Attack
New Fires and Acres: 9 fires for 18 acres / 16,655 acres Large Fire Growth

Great Basin Fire Potential Summary

ERC's remain near or beyond the 97th percentile across a large portion of northern Nevada, Idaho, western Wyoming and far northern Utah. With ongoing fires in ID and western WY into northern UT there is the potential for significant growth still in the coming days as breezy, drier and warmer weather returns. **High Risk** for wind/Low RH issued for Idaho in areas that have ongoing large fires.

Dry lightning in areas of extremely dry fuels in northeast Nevada and eastern Idaho, as well as western Wyoming and northern Utah Wed-Thu. **High Risk** has been issued.

Moist fuel conditions are expected to continue across southern portions of UT/NV and AZ Strip this week.

A Fuel and Fire Behavior Advisory is also in effect for the Northern half of Nevada, Southern Idaho, and Northwest Utah.

Current Incident Details

Today's Activity (from WFDSS):

Incident Name	Unique Fire Identifier	Size	Status	Latitude	Longitude	Pt. Of Origin Sage Grouse Habitat
