# Evening Brief

Date: August 1, 2026

## Preparedness Levels & Great Basin Fire Activity (from IRWIN)

| | | |
|---|---|---|
| Great Basin | PL 3 | Light Initial Attack Activity |
| National | PL 5 | New Fires and Acres: 6 fires / 1,607.5 Acres / 8,265.8 acres Large Fire Growth |

## Weather Summary:

****** High Risk Sunday for Idaho/Wyoming/Northern Utah and Burn Environment High Risk for central and eastern Areas Sun-Mon for Gusty Winds/Low RH with Dry Cold Frontal Passage ******

****** Hot/Dry Weather Spreads Eastwards as Monsoon Fades with Holdovers Likely ******

Very dry air spreads across the Great Basin through next week, including the eastern areas which have seen recent monsoonal showers & thunderstorms. Strong high pressure builds across the Great Basin with above normal midsummer temperatures before the cold front moves in.

Fuels will become more critical regionwide as the hot/dry conditions spread eastward and the monsoon becomes suppressed for the time being. Relative humidity will drop into the low single digits in many areas, along with poor recoveries at night. ***High Risk for gusty winds/low RH has been issued for parts of Idaho, Wyoming, into northern Utah Sunday as a strong dry cold front moves through the northern Great Basin, bringing winds of 30-40 mph and RH 8-15% over rapidly drying fuels along with Burn Environment High Risk in parts of eastern Nevada and Utah as southwest winds increase to 20-30 mph. High risk for Burn Environment and wind continues Monday for the eastern half of Utah and the AZ Strip Monday and western Wyoming. Winds will be stronger immediately along the front along with a shift in direction to the northwest overnight and through the day Sunday.***

The next opportunity for monsoon moisture bringing a return of thunderstorms would be to southern half of the region mid to late next week, which could bring more ignitions before moisture is beneficial, especially after a week of very hot and dry weather.

## Fuels/Fire Potential:

Fuels continue to dry region-wide. Overall fire danger has increased significantly across most of Idaho and Wyoming and fuels continue to steadily dry out in Nevada, Utah, and the AZ Strip, as the monsoonal influence begins to wane. By the end of the week most areas will likely be at or above the 90th percentile and be considered "critical" for large fire potential. Existing large fires will have opportunity for continued growth along with the potential for holdovers from recent lightning. Burn

periods will lengthen due to low single digit relative humidity during the day and poor recoveries at night.

## Resources:

**Aviation within the Great Basin**

- 0 VLAT, 8 LATs, 0 CL-415, 2 CL-215
- 16 SEATs, 2 SES, 2 LP, 9 AA, 2 ASM, 0 HLCO
- 13 Type 1 Helicopters / 12 Comm.
- 0 Type 1 HRAP / 0 Comm.
- 8 Type 2 Helicopters / 7 Comm.
- 2 Type 2 HRAP / 0 Comm.
- 17 Type 3 Helicopters / 17 Comm.

**Crews Committed within the Great Basin**

- 15 IHCs / 0 Available / 0 R&R
- 18 Type 2IA / 0 Available / 0 R&R
