Evening Brief

Date: August 5, 2026

Preparedness Levels & Great Basin Fire Activity (from IRWIN)

Great Basin	PL 4	Light Initial Attack Activity
National	PL 5	New Fires and Acres: 8 fires / 157.1 Acres / 23,874 acres Large Fire Growth

Weather Summary:

****** High Risk for Lightning Fri-Sun Southern Areas ******

****** High Risk for Winds/Burn Environment Fri-Sun Parts of ID/WY ******

Very hot, dry air continues across the Great Basin the next several days along with widespread smoke in most areas. Above normal temperatures will spread north and east the next few days, with many valleys above 100 degrees, along with Min RH 7-13%, along with poor overnight recoveries of 20-45%. Breezy winds continue in Utah/Wyoming and parts of Idaho Thursday with High Risk for Burn Environment or Wind due to hot temperatures, breezy wind gusts 20-30 mph and very low humidity.

Lightning threat begins Thursday in far southern areas of the Great Basin, slowly expanding northwards this weekend. This could bring more ignitions before any of the storms get wetter by the end of the weekend into early next week in the south. However, northern fringes of this monsoonal moisture will continue to produce a mix of wet & dry lightning as it moves into central areas of Nevada & Utah. ***High Risk for Lightning was issued for southern far areas Thu/Fri then up into some central areas this weekend.***

Further north, a weak trough will enhance the breezy winds Fri-Sun in parts of Idaho/Wyoming, with ***High Risk*** in effect for both ***Wind*** (30 mph+ gusts) as well as ***"Burn Environment"*** where just moderate winds of 15-25 mph will combine with very dry fuels and existing fires to pose an elevated fire threat.

Fuels/Fire Potential:

Fuels are critically dry region-wide with high to extreme fire danger. ERCs are above the 90th percentile in most areas, with many areas in the west and north above the 97th percentile. Existing large fires will have opportunity for continued growth along with the potential for holdovers or new non-natural fires and growth due to breezy winds, hot temperatures and very dry conditions. Burn periods will lengthen through the week due to low single digit relative humidity during the day and poor recoveries at night.

Great Basin
Coordination Center

As deeper monsoonal moisture moves north from Arizona into much of Utah & Nevada later this weekend into early next week, some areas in the south may see fire danger moderated. Potential for heavier rain in the southern Utah mountains could eventually bring the threat of flash flooding and landslides in burn scars by next week.

Resources:

Aviation within the Great Basin

- 1 VLAT, 12 LATs, 0 CL-415, 2 CL-215
- 16 SEATs, 2 SES, 1 LP, 11 AA, 3 ASM, 0 HLCO
- 16 Type 1 Helicopters / 15 Comm.
