Morning Briefing

GVC Staffing Level = 2

Weather Briefing

Idaho: Cool and showery conditions will be present across the forests of north central Idaho through Monday. A few thunderstorms are also possible this afternoon. Wetting rain chances will trend lower from today to Monday. Warm, dry high pressure is anticipated to be mostly present for Tuesday through early the following week, however weak storm systems will disrupt the high pressure (most notably on Wednesday and Sunday), increasing clouds and ridgetop winds for a short while. Some models suggest that there may be some moisture available from these breezy storm systems, however wetting rains are quite unlikely. Poor overnight humidity recovery on terrain will return Tuesday onward as well.

Montana: Cool and showery conditions will be present across the forests of west/southwest Montana through Monday. A few thunderstorms are also possible this afternoon. Wetting rain chances will trend lower from today to Monday. Warm, dry high pressure is anticipated to be mostly present for Tuesday through early the following week, however weak storm systems will disrupt the high pressure (most notably on Wednesday and Sunday), increasing clouds and ridgetop winds for a short while. These wind events may once again produce critical fire weather conditions for portions of the Beaverhead-Deerlodge NF. Some models suggest that there may be some moisture available from these breezy storm systems, however wetting rains are quite unlikely. Poor overnight humidity recovery on terrain will return Tuesday onward as well.
