Run Card Overview

Missoula Interagency Dispatch Zone Run Cards have been established as required by the Northern Rockies Southwest Zone Fire Danger Operating Plan (FDOP). Please refer to the current FDOP and its sub-documents for additional information on their purpose, terminology, and policy.

The Interagency Run Cards are developed by Fire and Dispatch Management to identify the number and type of resources initially dispatched to a reported wildland fire based on current fire danger criteria, fire management objectives, and resource availability. Run Cards will be used when a wildfire is reported that falls within the effective dates, operational hours, and does not meet the discretionary smoke report criteria.

Effective Dates: May 1 to September 30

Operational Hours: 5-day staffing, 10:00-16:30; 7-day staffing, 10:00-18:00

When using Run Cards, Missoula Interagency Dispatch Center (MDC) will dispatch the closest available resource(s), regardless of agency, as dictated by the appropriate Run Card. Outside of these conditions, notification of smoke reports will be made from MDC directly to the appropriate Duty Officer, who will determine the appropriate response.

During periods of large or multiple fire activity or when there are not enough resources to fulfill the Run Cards, the appropriate Duty Officers may initiate the Limited Response Plan. Duty Officers or delegated personnel will remain available to MDC to determine incident prioritization and response.

Duty Officers will retain the discretion to set their unit to a different response level than indicated for any given fire day, or to modify the response level for any given incident. When an NWCG qualified Incident Commander is on scene of the fire, they may adjust the pre-established Run Card response as well.

Limited Response Plan Protocol

A Duty Officer for a given district or unit can initiate the Limited Response Plan for any given reason.

The most common are:

- A predicted event that could result in multiple starts
- A widespread lightning activity resulting in numerous starts
- Inability to fulfill pre-established Run Cards due to staffing shortages

Individual districts and units have discretion of entering Limited Response and will only apply to the individual district or unit. During the Limited Response Plan, the appropriate Duty Officer(s) or designated personnel will provide guidance to and coordinate with MDC for initial response to new starts, as well as prioritization of incidents. A Local Multi-Agency Coordinating (LMAC) Group call may be initiated.

If the appropriate Duty Officer is unable to provide coordinated direction, the MDC Floor Supervisor is authorized to determine the fire priorities based on given information and make modifications to the established Run Card response during multiple start events.

Run Card Daily Responsibilities

Below is a brief overview of some of the daily procedures expected of Missoula Dispatch and fire resources to facilitate proper Run Card response and functionality. These are not all encompassing but meant to provide examples of some inputs needed for the successful implementation of Run Cards.

MDC Responsibilities

- MDC uses WildCAD, a computer assisted dispatching application specific to the wildland fire industry, to dispatch and track resources. For Run Cards to be functional within WildCAD, maps with Response Areas and Dispatch Locations must be updated yearly, if changes occur. WildCAD then utilizes these as reference points to determine the applicable Run Card for and closest resources to a reported incident.
- MDC will reference Daily Resource Status Page and put all identified resources available quarters in WildCAD by 1000, unless otherwise statused via radio prior to 1000. MDC will call the appropriate Duty Officer if the Resource Status Page has not been updated by 1000 daily.
- Set Dispatch Response Levels in WildCAD based on the afternoon observed indices.
See Dispatch Response Levels chart to see how these are determined.
 - Designated Dispatch Response Levels (Low, Moderate, High) determine what portion of the Run Card to “read” and the number and type of resources in the pre-established response.
- Status resources as they update dispatch with changes to locations and status.
- Dispatch resources to report of wildland fires using the appropriate tone out script.
See Appendix E for MDC Run Card Script for Run Card Response

Duty Officer Responsibilities

- Update Daily Resource Status Summary Page by 1000 with all fire resources available for the day as well as any out of area resources in zone on assignment.
https://gacc.nifc.gov/nrcc/dc/mtmdc/res_page/login.php (pw: mdcrsp)
- Communicate and coordinate with MDC, especially when zone is in Limited Response.

Resources Responsibilities

- Call into service referencing call sign, appropriate Dispatch Location, and specific location in service to.
 - MDC will status resources in WildCAD by Call Sign to the Dispatch Location designated while also recording specific location information provided.
See Appendix B for call sign protocols
 - When a fire is reported, MDC will look for closest available resources based on their Dispatch Location. If resources do not reference a dispatch location when calling into service, the dispatcher will assume resources’ location, thereby creating a potential for that resource to be passed by for another resource who is “correctly” statused and shows closer to incident.
- Update MDC when changing locations
- Update MDC when status changes
See Appendix C for resource statusing protocols
- Provide acknowledgement of fire dispatch/tone out upon dispatch checkback
- When on scene at incident, provide dispatch with a brief arrival report while preparing a full size up.
See Appendix D for example of arrival report

FDRAs, ERC, BI, and RL Tables

Fire Danger Rating Areas:

FDRAs	Special Interest Group (SIG) Name	Component Weather Stations
Lolo DNRC East	LDE	Ninemile, Seeley Lake, Blue Mountain
Lolo DNRC West	LDW	St. Regis, Ninemile, Plains
CSKT East	CE	Ronan
CSKT West	CW	Plains, Ronan
Bitterroot Low	BRL	Sula, West Fork, Little Rock Creek, Smith Creek, Sawmill Creek
Bitterroot High	BRH	Gird, Teepee Point, Deer Point, Hells Half

ERC Decision Threshold Ranges in all FDRAs:

Decision Threshold Ranges	Lolo DNRC East	Lolo DNRC West	CSKT East	CSKT West	Bitterroot Low	Bitterroot High
Low & PL 1	0-19.9	0-13.9	0-13.9	0-17.9	0-39.9	0-14.9
Moderate & PL 2	20-29.9	14-29.9	14-26.9	18-29.9	40-76.9	15-32.9
High & PL 3	30-42.9	30-43.9	27-35.9	30-40.9	77-93.9	33-44.9
Very High & PL 4 90% - 96.9%	43-48.9	44-20.9	36-41.9	41-47.9	94-104.9	45-51.9
Extreme & PL 5 >97%	49+	51+	42+	48+	105+	52+

BI Decision Threshold Ranges in all FDRAs:

Decision Threshold Ranges	Lolo DNRC East	Lolo DNRC West	CSKT East	CSKT West	Bitterroot Low	Bitterroot High
Low	0-12.9	0-13.9	0-24.9	0-17.9	0-49.9	0-19.9
Moderate	13-26.9	14-27.9	25-32.9	18-27.9	50-89.9	20-39.9
High >97%	27+	28+	33+	28+	90+	40+

Dispatch Response Level Matrix:

BI Class	H	Low	Low	Mod	High	High+
	M	Low	Low	Mod	Mod	High
	L	Low	Low	Low	Mod	Mod
		1	2	3	4	5
ERC Class

SHARED BOUNDARY:

- BRF Stevensville Ranger District (BD1)
- Dillon Interagency Dispatch

MDC NOTIFICATIONS:

- District Duty Officer
- Determine if Granite County 911 has dispatched county fire resources
- Notify responding resources of county fire resources status
- If smoke report is within 1 nautical mile of BRF Stevensville Ranger District (BD1), notify BD1 Duty Officer
- If smoke report is within 5 nautical miles of Dillon Interagency Dispatch (DDC) boundary, notify DDC

IF AIRCRAFT IS ORDERED:

-

KNOWN HAZARDS:

- If crossing Rock Creek, the creek crossing is a hazard unless you are using a bridge.
- Potential for vehicle traffic on Rock Creek Road during summer months.
- Road is very tight for engines and other large trucks in certain areas.

DUTY OFFICER CONSIDERATIONS:

MAJOR VALUES

- Trouthaven subdivision.
- Miller Flat subdivision.
- Williams Gulch subdivision.
- Private property and residences along Rock Creek corridor.
- Forest Service historic cabins (Rock Creek Cabin, Hogback Cabin, Morgan Case).
- Forest Service campgrounds, dispersed camp sites, and occupants.
- Forest Service portable RAWs site (Cinnabar Point area).
- Forest Service recreation trail corridors (especially Easthouse National Rec. trail #313).
- Welcome Creek Wilderness considerations.

OTHER CONSIDERATIONS

- Determine if additional resources are necessary
- Make standard notifications
- If it is a human start, order an INVf. If fire is human caused with criminal potential, order a USFS LEO.

- District Duty Officer
- Determine if Missoula County 911 has dispatched county fire resources
- Notify responding resources of county fire resources status
- If smoke report is within 1 nautical mile of BRF Stevensville Ranger District (BD1), notify BD1 Duty Officer
- If smoke report is within 5 nautical miles of Grangeville Interagency Dispatch (GVC) boundary, notify GVC

IF AIRCRAFT IS ORDERED:

- Document any wilderness intrusions.
- South Fork Lolo Creek is in a retardant avoidance area
- Helicopter is recommended for best accessing this response area to insert ground personnel.

KNOWN HAZARDS:

- Potential delays in getting adequate emergency care because of the remoteness in this response area.
- Hikers/recreators in fire area with no quick routes of egress.
- 2017 Lolo Peak Fire scar
- Steep, rocky slopes with poor access.

DUTY OFFICER CONSIDERATIONS:

MAJOR VALUES

- Selway-Bitterroot Wilderness
- FS trail system
- Wildlife habitat

OTHER CONSIDERATIONS

- Determine if additional resources are necessary
- Make standard notifications
- Notify Missoula Recreation Program staff
- Notify Bitterroot Recreation Program staff as the administer South Fork Lolo Trail System
- If it is a human start, order an INV. If fire is human caused with criminal potential, order a USFS LEO.
- South Fork Lolo Creek is a retardant avoidance area.
- Lack of good safety zones in heavy timber with poor access.
- Adherence to wilderness protocols with fire suppression activities.

- Consider values at risk and point protection needs for long-term duration fires
- Notify Red River Ranger District and Bitterroot NF if travel impacts along corridor road
- If it is a human start, order an INVF. If fire is human caused with criminal potential, order a USFS LEO

THIS PAGE INTENTIONALLY LEFT BLANK

APPENDICIES

THIS PAGE INTENTIONALLY LEFT BLANK

Appendix A – Terminology

Center Point: a center point is established within each Response Area and Dispatch Location. When a fire is reported within a Response Area, WildCAD uses this center point as a reference to determine the closest resource based on their current Dispatch Location, *unless* the resource identifies a more specific location.

Chase Truck: a pickup truck tied to either an engine or IA module . The chase truck does not need to be called in as a separate resource and will not be statused in WildCAD. If the chase truck separates from the Engine or IA Module, their call sign will then change to either “Utility” or “IA Module”, depending on the staffing. This change must be communicated to MDC. This resource type will not be integrated through IRWIN.

Discretionary Smoke Report: When any of the following smoke reports are received, the Run Card response will not be initiated. Instead, the appropriate Duty Officer will be contacted to determine the response.

- Federal Aviation Administration (FAA) Report.
- Abandoned Campfires, when clearly stated that it is still within the ring.
- Incidents where local government fire departments have responded/are on scene and are requesting no additional resources where there is no Federal or State protection or ownership

Dispatch Location: pre-established geographic locations representative of the general area. Fire resources are expected to reference appropriate dispatch locations, followed by a specific or exact location, when calling into service to the area.

Engine: an engine type of 3, 4, 5, or 6 minimally staffed with one qualified Engine Boss, in addition to other wildland firefighters. This resource type will be integrated through IRWIN.

Initial Attack Module (IA Mod): a group of wildland firefighters rostered with a NWCG qualified Incident Commander of any level. An IA Mod can travel with an engine and/or water tender but if the appropriately qualified individuals to operate the engine or water tender are not present, they will remain an IA Mod. This resource type will be integrated through IRWIN.

INVF: NWCG Qualified Wildland Fire Investigator

IRA: Inventoried Roadless Area. IRAs have difficult access to the area and are generally associated with timber sales and/or archeological sites.

Response Area: pre-established geographic boundaries encompassing protection areas with similar management objectives, land use, fire load, access, topography, fuel type and loading, etc. It can also be referred to as Dispatch Block or Run Card Block.

Squad: a group of wildland firefighters rostered with one NWCG qualified Firefighter Type 1 but no qualified NWCG Incident Commander. This resource type will be integrated through IRWIN.

Suppression Module (SMOD): has Interagency Standards for Fire and Fire Aviation Operations (Red Book) staffing requirements. Must be staffed with a minimum of 5 firefighters, one of which must be a qualified single resource boss or ICT5, two qualified FFT1s, and 2 qualified fallers.

Utility: A pickup truck with a group of firefighters that is NOT tied to an Engine or IA Module AND does NOT have a qualified incident commander on board. The Utility does need to be called in as its own resource, and they will be statused in WildCAD. This resource type will be integrated through IRWIN.

WUI: Wildland Urban Interface. A zone of transition where human development meets or intermingles with undeveloped wildland. Areas of WUI are at greater risk of catastrophic wildfires.

Appendix B - Call Signs

Call signs, when used properly, can aid in the quick identification of level of experience and/or qualifications for dispatchers, incident commanders, management, etc. For Run Cards, and dispatching in general, to be efficient and successful, call signs must be used correctly.

Overhead Call Signs

When to use call-signs:

- An individual mobilizing *separately* from an engine, crew, module, or chase truck
“Lolo BAT-71 in service to . . .”
- When updating staffing of an engine, crew, module, or chase truck *via radio*
“Bitterroot E-641 is now staffed with Operator 41, AFEO-41, and BAT-41”
Note: individuals without a call sign will use their district followed by their last name when updating staffing. “Bitterroot D1 Johnson enroute to...”
- When released from an incident specific position (i.e., Incident Commander, Task Force, Division, etc.)

When not to use call-signs:

- An individual *attached* to an engine, crew, module, or chase truck
“Bitterroot CAPT 31 with MOD L3-C in service to. . .”
Note: if you are attached to the engine, crew, module, or chase truck, do not call in with your individual overhead call sign – call in with the engine, crew, module, or chase truck call sign
- An individual attached to an incident in which they have been assigned an incident specific position (i.e., Incident Commander, Task Force, Division, etc.)
“Lolo CAPT 51 on scene of the Orange Fire. I will be the Orange IC.”
“Orange IC, Missoula Dispatch. . .”, not CAPT 51

Other Call Signs

- Engines must have at least 2 personnel (3 for Type 3 engines), with one of those being an Engine Boss
- All groups of firefighters (2 or more) must call in as one of the following:
 - Initial Attack Modules (IA Mods) must have at least one qualified Incident Commander (IC) of any level
 - Utility staffed separate from an Engine or IA Module who do *not* have a qualified IC of any level
 - Squads h
 - Overhead call sign plus 1 (or total number or personnel). *Note: statusing this way will not equate a dispatch to a fire during Run Card season, unless otherwise requested by the Duty Officer*
- Individuals without a call sign, traveling by themselves, will call in to MDC with their district followed by their last name.
“Missoula Dispatch, Lolo D7 Smith in service to. . .”

What’s my call sign?

View the spreadsheet [here](#)! PW: mdcweb

Note: this spreadhseet is view only.

Please call or email Missoula Dispatch for any call sign changes or updates.

Appendix C – Resource Statusing

When a resource’s location and/or status changes, accuracy is pertinent to the success of Run Cards and dispatching in general. Please use the following as a guideline when changing your status while in the field.

- If there is a large group all going to the same location or incident, each resource needs to call in separately *as associated with the resource item they may be attached to*, rather than having one overhead call in all the resources heading out (e.g., CAPT 72 + 21 with no breakout of resources). One exception, that is always welcomed if one resource calls in each resource in one transmission, as opposed to several resources calling in on separate radio transmissions (e.g., DIV 2, BAT 22, E-621, Mod 2A, are all enroute to incident).
- When changing locations, please call in with the Dispatch Location first, followed with specific location information: *“Show E-1165 in service to the Bonner Dispatch Location, working in the Olsen Mountain area for the afternoon”*
- When enroute to Project Work, Prescribed Fire, Smoke Report, or Wildfire, please call in when you or your resource is responding, has arrived on scene, has been released, is returning to station, and has arrived back in quarters. *This is required for the IRWIN integration of resources.*
 - If the resource will be returning to the same incident in the morning, please notify dispatch so they status the resource correctly for IRWIN integration purposes.

The table below is a breakdown of the status options used by Missoula Dispatch in WildCAD. These status options are color and text-style coded in WildCAD and provide a visual cue to the dispatchers of any resource’s status, as well as serving as the primary way of resource tracking.

Status	Definition	Available for Dispatch (Initial Attack)?
Available Quarters	Available at home station	Yes
Available	Not at home station, but available elsewhere <i>Use in conjunction with Dispatch Locations</i>	Yes
In Service	“Wheels rolling” – enroute to a location not associated with an incident. <i>Use in conjunction with Dispatch Locations</i>	Yes
Committed	Attached to an incident. Not yet responding.	No*
Responding	Enroute to an incident	No*
On Scene	Arrived at incident	No*
Available at Incident	On scene of incident, but available for another assignment	Yes
Returning	Returning to quarters from incident -OR- leaving an incident to another non-incident location	Yes
Out of Service	Unstaffed or unavailable for a variety of reasons	No*

**Resources can be diverted for higher priority incidents if requested by Duty Officers*

Appendix D – Initial Attack Fire Size Up Form

When a resource is the first to arrive on scene of a wildland fire, resources must call in the arrival report. This information will aid MDC in dispatching additional resources, as well as assisting in prioritizing incidents when multiple wildland fires may be present. Follow up with a full size as soon as resources are able.
