This includes the west, north and east side of the fire. The southern portion of the perimeter which does not threaten private land will be managed with a confine strategy, using natural barriers, constructed fire line, retardant and water drops. A large part of this portion of the perimeter is in the Selway-Bitterroot Wilderness. The ratio between the strategies will be calculated based on perimeter progression. The amount of contained fire perimeter will be calculated accordingly.</p> <p>There are no Evacuation Orders or Evacuation Warnings at this time.</p> <p>Unified command was dissolved Monday, September 18th.</p>									

GACC Detailed Situation Report - by Ownership

Report Date: Sep 23, 2017

Geographic Area: Northern Rockies Coordination Center

Preparedness Level: III

Large Incidents:

Suppression repair progress and speed will depend on excavator availability.

Reported containment reflects portions of the perimeter where the fire has been engaged at control lines and has been contained. A portion of the fire along the southern part of the perimeter will not reach man-made containment lines. This portion will be confined by natural barriers and weather conditions not conducive to fire spread.

Planned Actions: Div A: As weather permits, identify and implement suppression repair as needed.

Div B: As weather permits, implement suppression repair as needed. Patrol Elk Meadows road and the 373B road, taking appropriate action when needed to maintain ingress and egress.

Div C, E, F, H, J, L: Continue suppression repair efforts as weather and risk management actions allow.

The BAER team will continue with assessments.

Fire managers will continue to assess for opportunities to mitigate risk while monitoring smoldering fire activity and making progress on containment or suppression repair.

Significant Events: Minimal fire activity in the last 24 hours with precipitation occurring over the fire area and expected to continue through the next burning period.

Remarks: The existing confine/contain operational strategy is due to factors including elevated risk for personnel constructing direct line in heavy timber and snags with a low probability of success. Instead, an indirect containment strategy is used with natural fuel barriers and light fuels with little or no hazardous snags and constructed fire line. Indirect containment lines are not complete or considered "controlled" lines until the fire has reached those lines or they have been burnt out. Control means little likelihood that fire will escape the line. Change in completion percent reflects that the east side of the fire will not be completed until fire is held at the lines - approximately 50% of current fire perimeter. The remaining 50%, or west side of fire, will be managed under a confinement strategy within Wilderness and Primitive areas and few containment lines will actually be put in place.

Management Action Points have been developed for implementation in the long term strategy.

Last report unless significant activity occurs.

Planned Actions: Resources on Divisions A and B will be yarding material generated by line preparation operations for future transport or disposal. Resources on Divisions C, M, T, and U continue to mop-up, maintain, improve, patrol, and hold containment lines and mitigate hazard trees near containment lines through the use of mechanized equipment and handcrews. Aircraft are being used, when available, to support operations as needed. Backhaul of excess accountable property will continue.

Suppression repair has begun on all divisions.

Fire resources continue to provide initial attack capability of new starts within the TFR.

FS	0	0	0	0	0	0	1

Significant Events: **Due to current weather activity fire behavior has greatly moderated. Currently monitoring weather conditions to determine the duration of minimal fire behavior and the potential return to active and extreme fire behavior.**

Remarks: **Scalp Fire**

Total GIS Acres = 20,810 (S.Major drafted/digitized 9/17 with most current IR, recon flight info and MODIS)

HLC Acres = 3,969 (19%)

FNF Acres = 16,841 (81%)

Planned Actions: **Fire will be monitored for spread potential off the forest and look at opportunities to secure areas that pose a risk to non-Forest Service lands. IMT4 organization is using moderating conditions to catch up on organizational needs. Organizational needs will be reevaluated every couple days to determine staffing needs for the next couple weeks. Continue the public information trapline.**
