

# Pacific Northwest 7 Day Significant Fire Potential

Monday, June 26, 2017

## Legend

### Fire Environment (FEN) 4 levels

<b>Minimal</b>	- The Overall Fire Environment suggests a very low risk for Large fires ( <b>less than 1% chance</b> )
<b>Normal</b>	- The Overall Fire Environment suggests a <u>normal</u> risk for large fires ( <b>1 - 4% chance</b> )
<b>Elevated</b>	- The Overall Fire Environment suggests a moderately high risk for large fires ( <b>5 - 19% chance</b> )
<b>High Risk</b>	<b>The risk for large fire(s) is very high (≥ 20%)</b> Triggers: 1. ⚡ (Significant Lightning) 2. BEN (Critical Burn Environment)

The assessment of the overall fire environment considers multiple factors including weather, lightning amount and fuel dryness. Large Fire probabilities are derived objectively via statistical methods. **High Risk** levels (≥ 20% probability of a large fire) are almost always due to significant lightning as burning conditions alone rarely result in a large fire probability much above about 10%.

NW11		High	High	High	High	High	High	High
NW12		High	High	High	High	High	High	High

### Fire Potential:

Fire danger will continue to remain high over the geographic area today due to high temperatures and lightning in Oregon and Southern Washington. A marine push is moderating conditions on the west side but bringing gusty winds to the east side. The potential for lightning continues through Tuesday mainly in Southwest and Central Oregon. Conditions remain dry through the week. Significant fire potential is high where lightning is focused.

For weather details and advisories in your area see your local NWS fire weather planning forecast. Request spot forecasts from NWS for planned burn projects.

Please call NWCC Predictive Services (503) 808-2737 with any questions.

### Preparedness Level:

Northwest: 2  
National: 2
