

Pacific Northwest 7 Day Significant Fire Potential

Thursday, September 21, 2017

Legend

Fire Environment (FEN) 4 levels

Minimal	- The Overall Fire Environment suggests a very low risk for Large fires (less than 1% chance)
Normal	- The Overall Fire Environment suggests a <u>normal</u> risk for large fires (1 - 4% chance)
Elevated	- The Overall Fire Environment suggests a moderately high risk for large fires (5 - 19% chance)
High Risk	The risk for large fire(s) is very high (≥ 20%) Triggers: 1. ⚡ (Significant Lightning) 2. BEN (Critical Burn Environment)

The assessment of the overall fire environment considers multiple factors including weather, lightning amount and fuel dryness. Large Fire probabilities are derived objectively via statistical methods. **High Risk** levels (≥ 20% probability of a large fire) are almost always due to significant lightning as burning conditions alone rarely result in a large fire probability much above about 10%.

Fire Potential: Potential for new large fires remains low due to the cool, wet weather that has decreased fire danger significantly. No critical conditions are expected.

Regional Preparedness Level has decreased to 4.

For weather details in your local area, check NWS fire weather planning forecasts.

Preparedness Level:

Northwest: 4
National: 4
