

Pacific Northwest 7 Day Significant Fire Potential

Friday, 2/14/2025

Legend

Significant Fire Risk Levels

Low	- The Overall Fire Environment suggests a very low risk for significant fires (less than 1% chance)
Moderate	- The Overall Fire Environment suggests a moderate risk for significant fires (1 - 4% chance)
Elevated	- The Overall Fire Environment suggests a moderately high risk for significant fires (5 - 19% chance)
High Risk	The risk for significant fire(s) is very high (≥ 20%) Triggers: 1. ⚡ (Significant Lightning) 2. BEN (Critical Burn Environment)

The assessment of Significant Fire risk considers three main factors including: weather elements, number of ignitions, and background fire danger.

Significant Fire risk is derived objectively via statistical methods that combine all three factors. **High Risk** levels (≥ 20% probability of a significant fire) are usually due to numerous fire starts from lightning. Human fires don't often result in a large fire probability above 20%.

Fire Weather: Winter weather will continue through mid-day today. Then western lowlands will begin a general warming cycle through the weekend. Another upper low will bring west side rain and snow from the Cascades eastward, except for the lower Columbia Basin. Precipitation tapers to showers Monday. Additional warmer low-pressure systems affect the Geographic Area through next week.

Refer to local NWS forecasts for details in your area.

Note: During the off season, NWCC 7-day Significant Fire Potential Outlooks are issued Monday through Friday, excluding holidays.

Fire Potential: Fire danger remains too low to elevate the risk of new Significant Fires.
