

# Pacific Northwest 7 Day Significant Fire Potential

## Legend

### Fire Environment (FEN) 4 levels

<b>Minimal</b>	- The Overall Fire Environment suggests a very low risk for Large fires ( <b>less than 1% chance</b> )
<b>Normal</b>	- The Overall Fire Environment suggests a <b>normal</b> risk for large fires ( <b>1 - 4% chance</b> )
<b>Elevated</b>	- The Overall Fire Environment suggests a moderately high risk for large fires ( <b>5 - 19% chance</b> )
<b>High Risk</b>	The risk for large fire(s) is very high ( <b>≥ 20%</b> ) Triggers: 1. ⚡ (Significant Lightning) 2. BEN (Critical Burn Environment)

The assessment of the overall fire environment considers multiple factors including weather, lightning amount and fuel dryness. Large Fire probabilities are derived objectively via statistical methods. **High Risk** levels (≥ 20% probability of a large fire) are almost always due to significant lightning as burning conditions alone rarely result in a large fire probability much above about 10%.

**Fire Weather:** The day will start out cold and dry, but the next in a series of weather systems will start to impact western Washington and northwestern Oregon this afternoon, spreading gusty winds, rain, and snow across the region tonight and tomorrow. Further disturbances will maintain active winter weather into next week with a brief break in precipitation possible Friday.

Check your NWS forecasts for the latest details in your area including wind and winter weather guidance.

**Fire Potential:** The potential for new significant fires is expected to remain minimal through the winter.
