Legend

Fire Environment (FEN) 4 levels

Minimal	- The Overall Fire Environment suggests a very low risk for Large fires (less than 1% chance)
Normal	- The Overall Fire Environment suggests a normal risk for large fires (1 - 4% chance)
Elevated	- The Overall Fire Environment suggests a moderately high risk for large fires (5 - 19% chance)
High Risk	- The risk for large fire(s) is very high (≥ 20%) Triggers: 1. ⚡ (Significant Lightning) 2. BEN (Critical Burn Environment)

The assessment of the overall fire environment considers multiple factors including weather, lightning amount and fuel dryness. Large Fire probabilities are derived objectively via statistical methods. **High Risk** levels (≥ 20% probability of a large fire) are almost always due to significant lightning as burning conditions alone rarely result in a large fire probability much above about 10%.

Fire Weather: Rain should taper off today, but another system will bring more precipitation to western Washington, northwestern Oregon and higher elevation in eastern Washington through the weekend. Temperatures should remain mild to warm through the weekend. Expect breezy winds in eastern Washington at times through the weekend. Precipitation should ease up Monday. Another weather system appears to mainly impact British Columbia Tuesday/Wednesday, but some precipitation could impact northern Washington with this system. A ridge of high pressure should allow the rest of the region to enjoy a break in the wet weather, along with warming temperatures through the middle part of next week.

See your NWS forecasts for the latest weather details for your area.

Fire Potential: The potential for new significant fires is low.

Preparedness Level:

Northwest: 1
National: 1
