

Pacific Northwest 7 Day Significant Fire Potential

Legend

Fire Environment (FEN) 4 levels

- Minimal** - The Overall Fire Environment suggests a very low risk for Large fires (**less than 1% chance**)
- Normal** - The Overall Fire Environment suggests a **normal** risk for large fires (**1 - 4% chance**)
- Elevated** - The Overall Fire Environment suggests a moderately high risk for large fires (**5 - 19% chance**)
- High Risk** - The risk for large fire(s) is very high (**≥ 20%**)
Triggers: 1. ⚡ (Significant Lightning)
2. BEN (Critical Burn Environment)

The assessment of the overall fire environment considers multiple factors including weather, lightning amount and fuel dryness. Large Fire probabilities are derived objectively via statistical methods. **High Risk** levels (≥ 20% probability of a large fire) are almost always due to significant lightning as burning conditions alone rarely result in a large fire probability much above about 10%.

Fire Weather: Showers continue today on the west side as a warm front pushes through. An upper level trough and surface cold front will move through tonight and Thursday, bringing a more widespread precipitation to much of the region, with southern Oregon likely to see the least precipitation. Breezy winds are likely around the Columbia Gorge as the system passes through Thursday afternoon. Friday will see high pressure building, bringing dry and calm conditions lasting well into next week.

See your NWS forecasts for the latest details in your area.

Fire Potential: The potential for significant fire remains low as typical in the northwest during winter.

Preparedness Level:

Northwest: 1
National: 1
