

# Pacific Northwest 7 Day Significant Fire Potential

## Legend

### Fire Environment (FEN) 4 levels

<b>Minimal</b>	- The Overall Fire Environment suggests a very low risk for Large fires ( <b>less than 1% chance</b> )
<b>Normal</b>	- The Overall Fire Environment suggests a <b>normal</b> risk for large fires ( <b>1 - 4% chance</b> )
<b>Elevated</b>	- The Overall Fire Environment suggests a moderately high risk for large fires ( <b>5 - 19% chance</b> )
<b>High Risk</b>	The risk for large fire(s) is very high ( <b>≥ 20%</b> ) Triggers: 1. ⚡ (Significant Lightning) 2. BEN (Critical Burn Environment)

The assessment of the overall fire environment considers multiple factors including weather, lightning amount and fuel dryness. Large Fire probabilities are derived objectively via statistical methods. **High Risk** levels (≥ 20% probability of a large fire) are almost always due to significant lightning as burning conditions alone rarely result in a large fire probability much above about 10%.

**Fire Weather:** A weak weather system impacting British Columbia will spread clouds over some of the region with spotty very light rain or snow, mainly in western Washington today. Otherwise dry until Thursday night or Friday. Some dry easterly winds at times over the Cascades.

Check your NWS forecasts for the latest details in your area.

**Fire Potential:** The potential for significant fires is expected to remain low through the winter.

### Preparedness Level:

Northwest: 1  
National: 1
