

## Morning Brief

Date/Time Stamp: Friday, May 27, 2022, 08:11

No Report will be posted Monday, May 30<sup>th</sup>, in observance of Memorial Day.

Report will post next on Tuesday, May 31<sup>st</sup> at 0800, unless significant activity occurs.

### Preparedness Levels

#### Northwest PL

Current	3-Day	10-Day
1 (1/1)	1	1

National PL
2 (3/29)

Northwest Historic PL
See <a href="#">Preparedness Level</a> Product

#### Northwest IMT Rotation (5/24 – 5/31)

For additional IMT information refer to the [IMT Status/Rotation](#) page

NW Area Type 1	NW Area Type 2
PNW Team 3 - Johnson	NW Team 12 – Dimke
	NW Team 8 – Stock

### Northwest Incident Activity

#### New Fires and Acres

Initial attack activity: Light

8 fires for .95 acres

OR: 4 fires for 0.4 acres

WA: 4 fires for 0.55 acres

#### Large Fire Summary

New large incidents: 0

Reported incidents: 0 (OR: 0, WA: 0)

No growth on existing incidents

#### Northwest IMT Activity

NIMOs committed: 0

Type 1 IMTs committed: 0

Type 2 IMTs committed: 0

### National Fire Activity

Initial attack activity: Light (67 new fires)

New large incidents: 0

Large fires contained: 0

Uncontained large fires: 9

### National IMT Activity

Area Commands committed: 0

NIMOs committed: 1

Type 1 IMTs committed: 4

Type 2 IMTs committed: 4

Complex IMTs committed: 1

Nationally, there are no fires being managed under a strategy other than full suppression.

### Northwest Activity Summary

After midnight most of the geographic area received precipitation with the Washington Cascades and Olympic Peninsula getting a good soaking. East of the Cascades coverage was trace to light. Lightning accompanied the storm tracks and over 500 strikes were recorded. A few strikes over the Cascades and Willamette Valley were recorded, but in areas that received wetting rains. Most of the lightning covered a belt from Klamath Falls to Lewiston, Idaho where the showers were light and widespread. Overnight humidity recovery was excellent.

### Northwest Current Incident Details

*Incidents listed below meet large fire criteria and/or incidents with a Type 1 or 2 IMT assigned. Large incidents are defined as fires which are 100+ acres in timber or 300+ acres in grass/brush. For additional information on incidents no longer listed below please refer to the [Northwest Large Incident Summary](#) or [Northwest Fires Utilizing Other than Full Suppression Strategies](#)*

**Incidents not Previously Reported: 0**

**Incidents Previously Reported: 0**

### Northwest Fire Weather Summary

Expect cool, wet, and breezy weather today into Memorial Day with Saturday looking to be the wettest day.

Thunderstorms will be possible this afternoon and evening mainly around the eastern third of the region and tomorrow across much of eastern and southwestern Oregon. Locally gusty winds are likely in the vicinity of storms, as well as breezy general winds east of the Cascades. Winds will remain breezy through the weekend in central and eastern Oregon. Warmer and drier conditions should move into the region for the first half of next week, although weather models are not in great agreement on details at this point.

Monitor your NWS planning forecasts for local details and request spot forecasts if conducting prescribed burns.

### Northwest Fire Potential Summary

The potential for new significant fires remains low across the geographic area. The heavy fuels are dry enough to support holdovers from lightning strikes, however with the forecast calling for moister and cooler conditions over the weekend problems are not anticipated.

More info, see [NW 7-Day Significant Fire Potential Forecast](#), and [National 7-Day Significant Fire Potential](#)
