Northwest IMT Rotation (11/21 – 12/5)

For additional IMT information refer to the [IMT Status/Rotation](#) page <https://gacc.nifc.gov/nwcc/content/products/intelligence/teams.pdf>

NW Area Type 1	NW Area Type 2
PNW Team 2 - (Loomis)	
PNW Team 3 - (Quinones)	

Northwest Incident Activity

4 fires for 1 acre (11/24 – 11/30)

OR: 4 fires for 1 acre

WA: 0 fires for 0 acres

Large Fire Summary

New large incidents: 0

Reported incidents: 0 (OR: 0, WA: 0)

0 acres growth on existing incidents

Northwest IMT Activity

NIMOs committed: 0

Type 1 IMTs committed: 0

Type 2 IMTs committed: 0

Complex IMTs committed: 0

National Fire Activity

(IMSR 11/24 – 11/30)

Initial attack activity: Light (328 fires)

New large incidents: 2

Large fires contained: 6

Uncontained large fires: 1

National IMT Activity

Area Commands committed: 0

NIMOs committed: 0

Type 1 IMTs committed: 0

Type 2 IMTs committed: 0

Complex IMTs committed: 0

Nationally, there are no fires being managed under a strategy other than full suppression.

Northwest Activity Summary

Temperatures across the Geographic Area over the past week were near normal. No precipitation fell across the Geographic Area until Thursday. Then light to moderate precipitation fell. Initial attack activity remained minimal.

Northwest Current Incident Details

Incidents listed below meet large fire criteria and/or incidents with a Type 1 or 2 IMT assigned. Large incidents are defined as fires which are 100+ acres in timber or 300+ acres in grass/brush. For additional information on incidents no longer listed below please refer to the [Northwest Large Incident Summary](#) or [Northwest Fires Utilizing Other than Full Suppression Strategies](#)

Incidents not Previously Reported: 0

Incidents Previously Reported: 0

Northwest Fire Weather Summary

A series of Pacific frontal systems for the next 7 days will bring periods of moderate to heavy precipitation to the Cascades and westward. Diminishing amounts expected further inland. Southeast Oregon will see the least amount but still see bouts of rain and snow. Nearly all areas will receive gusty south to southwest general winds over the next several days. This is especially so across eastern Oregon and portions of eastern Washington Friday through Sunday.

Northwest Fire Potential Summary

Risk of new significant fires remain low. However, 100-hour and smaller fuel moistures are well below daily normal values for most PSAs. 1000-hour fuel moistures are falling area wide. Current and past burn projects will have increased potential to move outside of their intended footprint until significant precipitation returns. Review spot weather forecasts, particularly where wind is a concern.
