For additional IMT information refer to the [IMT Status/Rotation](#) page

NW Area Type 1	NW Area Type 2
PNW Team 3 - Johnson	NW Team 8 - Stock
PNW Team 2 - Lane	NW Team 6 - Sheldon

### Northwest Incident Activity

#### New Fires and Acres (1/7 – 1/13)

Initial attack activity: Light

1 fire for 0.1 acres

OR: 1 fire for 0.1 acres

WA: 0 fires for 0 acres

#### Large Fire Summary

New large incidents: 0

Reported incidents: 0 (OR: 0, WA: 0)

No growth on existing incidents

#### Northwest IMT Activity

NIMOs committed: 0

Type 1 IMTs committed: 0

Type 2 IMTs committed: 0

### National Fire Activity

#### IMSR will post every Friday (1/7 – 1/13)

Initial attack activity: Light (192 new fires)

New large incidents: 8

Large fires contained: 6

Uncontained large fires: 2

#### National IMT Activity

Area Commands committed: 0

NIMOs committed: 0

Type 1 IMTs committed: 0

Type 2 IMTs committed: 0

Nationally, there are 0 fires being managed under a strategy other than full suppression.

### Northwest Activity Summary

Continued moisture came into the geographic area with slightly warmer temperatures and lighter quantities of moisture. Upper elevation watersheds continued to receive snowfall. Travelers continued to experience delays and closures over mountain passes. A few pile burning activities occurred and most of those were in south Central Oregon.

### Northwest Current Incident Details

Incidents listed below meet large fire criteria and/or incidents with a Type 1 or 2 IMT assigned. Large incidents are defined as fires which are 100+ acres in timber or 300+ acres in grass/brush. For additional information on incidents no longer listed below please refer to the [Northwest Large Incident Summary](#) or [Northwest Fires Utilizing Other than Full Suppression Strategies](#)

Incidents not Previously Reported: 0

Incidents Previously Reported: 0

### Northwest Fire Weather Summary

Upper-level high pressure is building over the Pacific Northwest, leading to mainly dry and calm weather today and through the weekend. Some shortwave disturbances will flatten the ridge at times, allowing some chances for light precipitation for northwestern Washington over the weekend, then across more of the region in the first half of next week. Any precipitation during this period should be relatively light. See your NWS forecasts for the latest details for your area.

### Northwest Fire Potential Summary

The potential for new significant fires remains very low across the geographic area, as typical during winter.

More info, see [NW 7-Day Significant Fire Potential Forecast](#), and [National 7-Day Significant Fire Potential](#)
