PNW Team 2 – Lane	NW Team 12 – Dimke

Northwest Incident Activity

New Fires and Acres

Initial attack activity: Light
3 fires for .3 acre
OR: 1 fire for .1 acres
WA: 2 fires for .2 acres

Large Fire Summary

New large incidents: 0
Reported incidents: 0 (OR: 0, WA: 0)
No growth on existing incidents

Northwest IMT Activity

NIMOs committed: 0
Type 1 IMTs committed: 0
Type 2 IMTs committed: 0

National Fire Activity

Initial attack activity: Light (212 new fires)
New large incidents: 7
Large fires contained: 5
Uncontained large fires: 18

National IMT Activity

Area Commands committed: 0
NIMOs committed: 1
Type 1 IMTs committed: 1
Type 2 IMTs committed: 6
Complex IMTs committed: 0

Nationally, there are 46 fires being managed under a strategy other than full suppression.

Northwest Activity Summary

The forecasted heat wave has brought in above average temperatures with mostly clear skies for the day. Humidity recovery was in the normal range west and east of the Cascades. Light and isolated precipitation observed in the geographical area. Light lightning activity in the Southeast portion of OR. Minimal initial attack.

Northwest Current Incident Details

Incidents listed below meet large fire criteria and/or incidents with a Type 1 or 2 IMT assigned. Large incidents are defined as fires which are 100+ acres in timber or 300+ acres in grass/brush. For additional information on incidents no longer listed below please refer to the [Northwest Large Incident Summary](#) or [Northwest Fires Utilizing Other than Full Suppression Strategies](#)

Incidents not Previously Reported: 0

Incidents Previously Reported: 0

Northwest Fire Weather Summary

A warming and drying trend will begin on the west side today and will expand to include the east side during the weekend. Temperatures will rise well above normal and relative humidity will drop below normal for the entire geographic area lasting through Monday. General winds will shift first to the north and then to the northeast or east as the heating takes hold. Little risk of thunderstorms is foreseen for the time being, but the situation could change.

Monitor your NWS forecasts for local details.

Northwest Fire Potential Summary

The potential for new significant fires remains low across the geographic area, but fire danger indices will rise with the drier weather, particularly east of the Cascades. If thunderstorms develop after several days of warm, dry weather, southern Oregon could see a jump in initial attack activity over the weekend.

More info, see [NW 7-Day Significant Fire Potential Forecast](#), and [National 7-Day Significant Fire Potential](#)
