**FUEL MODEL**

*(For more detailed information, refer to NWCG Publication: Fire Behavior Field Reference Guide, PMS 437)*

<b>NB:</b> Non-Burnable – snow/ice, bare ground, urban or suburbs, agricultural field
<b>GR:</b> Grass – varies from short/patchy or grazed to dense/tall; primary carrier is GRASS
<b>GS:</b> Grass/Shrub – varies from live to dead, low to high fuel load; primary carrier is COMBINED GRASS/SHRUB
<b>SH:</b> Shrub – over 50% shrub; primary carrier is LIVE & DEAD SHRUB TWIGS/FOLIAGE
<b>TU:</b> Timber/Understory – primary carrier is FOREST LITTER COMBINED W/ GRASS OR SHRUB
<b>TL:</b> Timber/Litter – primary carrier is DEAD & DOWN WOODY FUEL; live fuel (if present) has little effect on fire behavior
<b>SB:</b> Slash/Blowdown – primary carrier is ACTIVITY FUEL OR BLOWDOWN; forested areas w/ heavy mortality may be modeled in SB
