29. Primary Fuel Model, or Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc.):  
 Fuel Model: **Timber (Litter and Understory)**  
**The fires are burning in old fire scars. The reproduction brush within the fire area has heights of 6-8 feet and the heavy down slash from the previous fire is contributing to fire line intensity. The high snag ratio is contributing to the spotting occurring with in the fire area.**

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:

12 hours: **The recreation area of City of Oakland Camp, Chandler Road, railroad, power lines, watershed, Mt Hough Lookout, and Communications Site.**

**There is continued threat to critical infrastructure and residential properties.**

24 hours: **There is potential threat to timber sales and private timber end holdings.**

48 hours: **The continued threat to values at risk.**

## Short Briefing 209 Summary Report

Report executed at: Aug 21, 2017 09:08 PM

72 hours: **The fires have the potential to combine thereby increase the incident complexity and continue threatening to the surrounding areas.**

Anticipated after 72 hours: **The fire is anticipated to continue to grow in complexity and threaten the communities with in the fire area.**

43. Anticipated Incident Containment or Completion Date: <b>08/31/2017</b>	42. Projected Final Incident Size/Area:	9. Cause: <b>Unknown</b>
---	---	-----------------------------

39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:

12 hours: **6 Type 1 Crews  
6 IHC Crews**

# Short Briefing 209 Summary Report

Report executed at: Aug 21, 2017 09:08 PM

impacts:	Private residences and properties near Oak Fire and along the Hwy 96 corridor. Private non residential properties lie within the Cedar fire containment area. Telecommunication infrastructure is threatened by the Cedar Fire. A Pacific Power and Light 69,000 KV Transmission line along Hwy 96 could be threatened. The loss of this transmission line would impact communities from Happy Camp to Seiad Valley. Economic impacts to the local communities could be seen from degraded air quality and area closures, impacting river rafting, hunting, and other recreational activities. Traditional cultural and heritage resources of the federally recognized Karuk tribe are currently threatened, including several significant Inaan ceremonial sites and the prehistoric Boundary Trail. Wilderness values within the Red Buttes and Siskyou Wilderness, Coho Salmon habitat in the main stream of Thompson Creek, Clear Creek, and Klamath River Wild and Scenic River. Northern spotted owl habitat is currently threatened by all the fires in the complex. Northern Goshawk habitat in the Oak fire. High value public timber plantations are being threatened by the Oak and Cedar fires.

29. Primary Fuel Model, or Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc.):  
 Fuel Model: **Timber (Grass and Understory)**  
**Dense stringers of mixed conifers with moderate to heavy slash loading. Brush in the open areas.**

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading

# Short Briefing 209 Summary Report

Report executed at: Aug 21, 2017 09:08 PM

impacts:	
12 hours:	The six fires are within designated wilderness and pose a threat to multiple values. Wilderness and scenic river values would be at risk and add to the economic loss to the local community. Numerous T&E species could be compromised by a large high intensity fire. Numerous trail closures are in effect and additional closures would be needed with continued fire activity on the Wallow. These closures of the trails and wilderness areas has an economic impact to the local communities as PCT users use the nearby communities for replenishment, rest, etc. Hunting season is currently underway and is effected by fire activity. There are a number of small residential enclaves on the periphery of the wildernesses that could suffer some economic impacts by having fewer wilderness users passing through. Ancestral lands used by the Shastean and Karuk peoples who engage in seasonal subsistence efforts as well as members of the Quartz Valley Indian Reservation could be impacted by the loss of access and forage. The Wallow Fire has put a large block of private timber lands at risk if the fire were to jump the PCT.
24 hours:	The threats to the areas and populations listed in the 12hr threat will continue.
48 hours:	Areas and populations in the 12 and 24 hours threats will continue to be at risk with the addition of residents within Scott Valley and the Hwy 3 corridor, should the fire become established east of the PCT.
72 hours:	Continuation of all previous threats with the addition of the town of Etna and other small communities and structure clusters in the Scott River Valley.
Anticipated after 72 hours:	

43. Anticipated Incident Containment or Completion Date: <b>09/30/2017</b>	42. Projected Final Incident Size/Area:	9. Cause: <b>Lightning/Natural</b>
---	---	---------------------------------------

39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:

# Short Briefing 209 Summary Report

Report executed at: Aug 21, 2017 09:08 PM

impacts:		
<p>Firefighter and public safety, long term exposure of smoke to fire fighters, communities, and the public.                  Private residences and properties lie immediately to the west and south of the current fire perimeter.                  Critical telecommunication infrastructure is currently threatened.                  Northern Spotted Owl Habitat lies within the fire area.</p>		
12 hours:	<p>Within the Red Buttes Wilderness water quality in Cedar Creek, Bear Valley Creek, Morgan Creek, and Fourmile Creek will be threatened if the fire grows beyond the current fire perimeter. These streams drain directly into threatened Coho Salmon habitat in the mainstem of Thompson Creek.                  Coho Salmon habitat in Thompson Creek is currently threatened as it lies within the current fire perimeter.                  The prehistoric Boundary Trail could be impacted by fire management efforts. Additionally this trail may be closed which would restrict access from the north to the Pacific Crest Trail.</p>

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:

12 hours: **Natural resource values threatened include rare plants (including sensitive species *Cypripedium fasciculatum*), inventoried roadless areas, threatened and endangered steelhead salmon habitat in the North Fork Wilderness, and endangered Northern Spotted Owl populations. Also at risk are salable timber on**

## Short Briefing 209 Summary Report

Report executed at: Aug 21, 2017 09:08 PM

**federal lands, and private timber and grazing resources (Travis Ranch LLC). Archeological resources at risk include Willow Creek Cabin site and Packwood Flat Cabin site. Potential impacts to bow season, which opened 8/19.**

24 hours:  
 48 hours:  
 72 hours:  
 Anticipated after 72 hours:

43. Anticipated Incident Containment or Completion Date: <b>08/25/2017</b>	42. Projected Final Incident Size/Area: <b>4,736</b>	9. Cause: <b>Lightning/Natural</b>
---	---	---------------------------------------

39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:

12 hours:  
 24 hours:  
 48 hours:  
 72 hours:  
 Anticipated after 72 hours:

29. Primary Fuel Model, or Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc.):

Fuel Model: **Timber (Litter and Understory)**

**Timber and mountain brush fuel types. Heavy precipitation from last winter has weakened trees and created increased dead and down fuel loads. Most fires are burning in burn scars that occurred within the last 10 - 20 years. Fuel moistures remain high, however fire behavior still remains active.**

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and

# Short Briefing 209 Summary Report

Report executed at: Aug 21, 2017 09:08 PM

environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:		
12 hours:	Thunderstorm development will dictate firefighting strategies and tactics. If the thunderstorms are dry and bring new lightning strikes to the fire area, it will pose a risk to firefighters. The Haypress Fire will continue to threaten the Fowler Cabin and a private inholding south west of the fire. If the wind aligns with the Wooley Creek drainage, a strong down slope push could occur. Threat to Ukonom Mt. Lookout and associated Siskiyou Telephone microwave repeater, significant cultural sites for the Karuk Tribe, and structures on private parcels. Smoke conditions under the inversion in Klamath River drainage may affect local residents. Threat to aquatic fisheries and cold-water refugia for salmon. Threat to spotted owl, bald eagle habitat, and highly-valued public timber and forest resources.	
24 hours:	Predicted thunderstorms are expected through the evening. It is uncertain as to the amount of precipitation that will be produced. The Haypress Fire will continue to threaten the Fowler Cabin and a private inholding south west of the fire. If the wind aligns with the Wooley Creek drainage, a strong down slope push could occur. Threat to Ukonom Mt. Lookout and associated Siskiyou Telephone microwave repeater, significant cultural sites for the Karuk Tribe, and structures on private parcels. Smoke conditions under the inversion in Klamath River drainage may affect local residents. Threat to aquatic fisheries and cold-water refugia for salmon. Threat to spotted owl, bald eagle habitat, and highly-valued public timber and forest resources.	
48 hours:	Thunderstorms could continue to develop as the monsoonal moisture pushes east. A cold front is predicted to follow the storms bringing shifting gusty winds. Priority will be keeping the Haypress Fire confined to the wilderness. Historic Fowler cabin and private inholding will continue to be threatened. Threat to Ukonom Mt. Lookout and associated Siskiyou Telephone microwave repeater, significant cultural sites for the Karuk Tribe, and structures on private parcels. Smoke conditions under the inversion in Klamath River drainage may affect local residents. Threat to aquatic fisheries and cold-water refugia for salmon. Threat to spotted owl, bald eagle habitat, and highly-valued public timber and forest resources.	
72 hours:	A slight cooling trend may bring some relief for firefighters towards the end of the week. Threat to Fowler Cabin and private inholdings. Threat to Ukonom Mt. Lookout and associated Siskiyou Telephone microwave repeater, significant cultural sites for the Karuk Tribe, and structures on private parcels. Smoke conditions under the inversion in Klamath River drainage may affect local residents. Threat to aquatic fisheries and cold-water refugia for salmon. Threat to spotted owl, bald eagle habitat, and highly-valued public timber and forest resources.	
Anticipated after 72 hours:	Heavy dead and down, coupled with a large amount of snags will pose a threat to firefighting activities. Threat to Fowler Cabin and private inholdings. Threat to Ukonom Mt. Lookout and associated Siskiyou Telephone microwave repeater, significant cultural sites for the Karuk Tribe, and structures on private parcels. Smoke conditions under the inversion in Klamath River drainage may affect local residents. Threat to aquatic fisheries and cold-water refugia for salmon. Threat to spotted owl, bald eagle habitat, and highly-valued public timber and forest resources.
