

Short Briefing 209 Summary Report

Report executed at: Oct 21, 2020 08:13 PM

Incident Name: **North Complex**

2. Incident #: CA-PNF-001308	14. Date/Time Submitted: 10/21/2020 1807 PDT	9. Incident Type: Complex	7. Size/Area Involved: 318930 Acres	8. % Contained or MMA: 95 %																								
4. Incident Commander(s) & Agency or Organization: CIIMT11, IC Chris Fogle	17. County: Plumas	25. Short Location: S of Quincy, W of La Porte, N of Challenge, E of North Fork Feather River		31. Injuries/Illness this Reporting Period: 0																								
<p>30. Damage Assessment Information (summarize damage and/or restriction of use or availability to residential or commercial property, natural resources, critical infrastructure and key resources, etc.):</p> <p>Over the course of the North Complex incident the following communities were directly impacted: Berry Creek, Big Bend, Brush Creek, Feather Falls, Forbestown, Lower Forbestown, Junction House and Lumpkin.</p> <p>Multiple recreation areas and Forest Service administration facilities were impacted as well as considerable amounts of high-value private timber lands, Union Pacific Railroad infrastructure and Pacific Gas and Electric (PG&E) infrastructure.</p> <p>The Plumas National Forest has experienced significant loss of timber lands and grazing resources do to fire impacts.</p> <p>DINS Teams have completed gathering official information on the status of structures within the fire perimeter. Final numbers from that effort as of 09/29/2020:</p> <p>Single Residences damaged: 51 Single Residences destroyed: 1523 Nonresidential Comm. Property damaged: 5 Nonresidential Comm. Property destroyed: 59</p>

Short Briefing 209 Summary Report

Report executed at: Oct 21, 2020 08:13 PM

Other Minor Structures damaged: 57
Other Minor Structures destroyed: 760
Infrastructure damaged = 6
Infrastructure destroyed = 10

Butte County sustained significant damage to county roads, bridges, road signs and guardrails. Caltrans also reported significant damage to roads, signs and guardrails. Community water tanks and pump houses were damaged or destroyed. Two schools, Feather Falls and Berry Creek, were destroyed. One Butte County Fire Station was destroyed and one was damaged. PG&E has sustained damage to 2,345 electrical structures.

****The table above does not save the information after being entered into the document. The above numbers in this narrative are accurate and are subject to being refined as more information is available.**

29. Primary Fuel Model, or Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc.):
 Fuel Model: **Brush (2 feet)**
Fire continues to slowly consume pockets of fuel in interior islands. The fire could become more active through fine fuels and move in timber litter (red and white fir stands) and brush with litter fuels. The fire has burned into several fire footprints. To the North (1999 Lookout), South (1999 Pidgeon), East (2008 Cold) and to the West (2008 Scotch, 2008 BTU Complex and 2018 Camp). Unburned islands and pockets of incomplete burn could contribute to fire activity within the current footprint.

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or

Short Briefing 209 Summary Report

Report executed at: Oct 21, 2020 08:13 PM

cascading impacts:	
12 hours:	Previously reported threats have been mitigated. The fires perimeter and internal heats continued to be monitored by crews and resources.
24 hours:	Potential threat to previously reported at risk values could return with an increase in fire behavior in the fire perimeter due to the conditions related to the red flag warning.
48 hours:	Conditions associated with the Red Flag Warning could bring an increase in fire behavior and re-threaten previously reported at risk values. Threats continue to be mitigated as resources are distributed along the fires perimeter.
72 hours:	Conditions associated with the fire weather warning period could bring an increase in fire behavior and re-threaten previously reported at risk values Threats continue to be mitigated as resources are distributed and continue to monitor along the fires perimeter.
Anticipated after 72 hours:	Reported threats continue to be mitigated. The fires perimeter and internal heats continued to be monitored by crews. Fire area will see nighttime temperatures in to the teens.

43. Anticipated Incident Containment or Completion Date: 11/30/2020	42. Projected Final Incident Size/Area:	9. Cause: Unknown
---	---	-----------------------------

39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:	
North and South Zones -	
12 hours:	(4) SEC2 (3) EMTF
West Zone -	
No critical resource needs	
24 hours:	Same as 12 hrs.
48 hours:	Same as 24 hours.
72 hours:	Same as 48 hours.
Anticipated after 72 hours:	Same as 72 hours.

29. Primary Fuel Model, or Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc.):
 Fuel Model: **Timber (Grass and Understory)**
Mature timber with heavy duff, litter, shrubs, and grass. ERC, BI and 1000-hour fuels are at high indices and trending down. Steep rugged terrain with parallel ridges and drainages hamper direct line construction.

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:

12 hours:	Scattered residences (Miller Ranch, Denney, Forks of the Salmon and Cecilville), Native American cultural sites (Hoopa, Karuk and Yurok tribes), T&E Species (Northern Spotted Owl and Southern Oregon/Northern California Coast coho salmon), grazing allotments (Forks, Mill Creek and Shasta).
24 hours:	Scattered residences (Miller Ranch, Denney, Forks of the Salmon and Cecilville), Native American cultural sites (Hoopa, Karuk and Yurok tribes), T&E Species (Northern Spotted Owl and Southern Oregon/Northern California Coast coho salmon), grazing allotments (Forks, Mill Creek and Shasta).
48 hours:	Scattered residences (Miller Ranch, Denney, Forks of the Salmon and Cecilville), Native American cultural sites (Hoopa, Karuk and Yurok tribes), T&E Species (Northern Spotted Owl and Southern Oregon/Northern California Coast coho salmon), grazing

29. Primary Fuel Model, or Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc.):
 Fuel Model: **Timber (Litter and Understory)**
Fire is burning in King Fire scar, where fuels consist of heavy concentrations of standing snags and 4-6 foot brush.

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:

Short Briefing 209 Summary Report

Report executed at: Oct 21, 2020 08:13 PM

The fire is contained within MAP 1. Should the fire extend beyond MAP 1 and become established in the Rubicon the fire would threaten infrastructure, recreational, natural and cultural values. These include a scattered mix of recreation residences, private structures and larger private inholdings. In addition, private industrial timberlands, Crystal Basin Recreation Area and associated recreational and administrative facilities, recreational trail systems, hydroelectric power facilities, and distribution lines.

Additional values include natural and cultural resource resources including botanical, Goshawk and Spotted Owl PACs, California Red-Legged Frog critical habitat and cultural resources, including high value Native American historic sites.

29. Primary Fuel Model, or Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc.):
 Fuel Model: **Timber (Grass and Understory)**
Fuels outside of recent fire scars consist of mixed conifer overstory with litter, small trees, and brush understory. Low canopy base heights are common with ladder fuels connecting surface to crown. Recent fire scars are light timber litter and brush fuel models with varying amounts of large down wood.

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:
 12 hours: **Modest surface fire spread expected on portions of the east and southern flanks. Fire scars in the surrounding area continue to**

Short Briefing 209 Summary Report

Report executed at: Oct 21, 2020 08:13 PM

	moderate fire spread. Decreased visibility and air quality regionally.
24 hours:	Fire will continue to slowly progress as it spreads on the east and west sides. The Goff Fire footprint has been effective in slowing the spread to the south and west. A small section of the fire in the southwest flank as been backing into Fort Goff Creek. The northern flank has burned through the Goff Fire and is in an area without recent fire history. If it spreads further to the north it will run into the Lick Fire (2012) and the Abney Fire (2017) scars. Applegate Lake is four miles to the NE.
48 hours:	Fire will continue to slowly progress as it spreads on the east and west sides. The Goff Fire footprint has been effective in slowing the spread to the south and west. A small section of the fire in the southwest flank as been backing into Fort Goff Creek. The northern flank has burned through the Goff Fire and is in an area without recent fire history. If it spreads further to the north it will run into the Lick Fire (2012) and the Abney Fire (2017) scars. Applegate Lake is four miles to the NE.
72 hours:	Fire will continue to slowly progress as it spreads on the east and west sides. The Goff Fire footprint has been effective in slowing the spread to the south and west. A small section of the fire in the southwest flank as been backing into Fort Goff Creek. The northern flank has burned through the Goff Fire and is in an area without recent fire history. If it spreads further to the north it will run into the Lick Fire (2012) and the Abney Fire (2017) scars. Applegate Lake is four miles to the NE.
Anticipated after 72 hours:	If current forecast verifies pre-frontal winds could provide for additional growth to the NE and would further burn into previous fire scars, however wetting rains are forecasted to follow which would moderate fire behavior substantially. No issues or concerns anticipated if weather forecast validates.

43. Anticipated Incident Containment or Completion Date: 11/01/2020	42. Projected Final Incident Size/Area: 9,500	9. Cause: Unknown

Short Briefing 209 Summary Report

Report executed at: Oct 21, 2020 08:13 PM

	Active?
Quarantine in Progress	
Area Restriction in Effect	

29. Primary Fuel Model, or Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc.):
 Fuel Model: **Timber (Litter and Understory)**
Fuels outside of recent fire scars are mixed conifer overstory with litter, small trees, and brush understory. Low canopy base heights are common with ladder fuels connecting surface to crown. Recent fire scars are light timber litter and brush fuel models with varying amounts of large down wood.

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:

12 hours:	<p>Mop up and hazard mitigation continues in those impacted areas. Tactical patrols and response to public service calls continue as necessary. Should fire re-establish outside containment lines, the potential for threatening multiple small communities in the areas generally south of Cave Junction Or, including Takilma, Sunstar and portions of Bridgeview, Holland and California continues to exist. Oregon Caves National Monument (NPS) which contain historic buildings and artifacts remains closed. Structure Protection Plan has been implemented. The fire area includes a variety of areas of natural resource concerns including Northern Spotted Owl, botanical sites with endangered species, two wilderness areas, class 1 airsheds, and important fisheries. This area has a rich history of cultural resources and is part of the Karuk tribe ancestral lands. Increased air quality impacts under ridge of high pressure.</p>
24 hours:	<p>Tactical patrols and response to public service calls continue as necessary. Any new closure of Hwy 199 or Hwy 96 would be disruptive to interstate commerce as traffic is re-routed. In Oregon, more communities including O'Brien and additional areas of Bridgeview, Holland, and California Bar could be impacted with evacuations should the fire re-establish outside the planned containment lines. Increased air quality impacts under ridge of high pressure.</p>
48 hours:	<p>Pacific Power transmission lines and Spectrum cellular communications tower and sites which provide power and communications to several communities including Gasquet could be threatened. To the north, more jurisdictions including Cave Junction, Oregon Caves National Monument and others could be affected bringing increased structure threat and concerns. Tactical patrols and response to public service calls continue as necessary.</p>
72 hours:	<p>Pacific Power transmission lines and Spectrum cellular communications tower and sites which provide power and communications to several communities including Gasquet could be threatened. To the north, more jurisdictions including Cave Junction, Oregon Caves National Monument and others could be affected bringing increased structure threat and concerns. Tactical patrols and response to public service calls continue as necessary.</p>

Short Briefing 209 Summary Report

Report executed at: Oct 21, 2020 08:13 PM

Pacific Power transmission lines and Spectrum cellular communications tower and sites which provide power and communications to several communities including Gasquet could be threatened. To the north, more jurisdictions anticipated after 72 hours: including Cave Junction, Oregon Caves National Monument and others could be affected bringing increased structure threat and concerns. Forecast calls for increased winds ahead of a cooler and wetter weather pattern. If forecast verifies, threats from fire will be significantly reduced including air quality and smoke impacts.

43. Anticipated Incident Containment or Completion Date: 11/01/2020	42. Projected Final Incident Size/Area: 160,000	9. Cause: Unknown
---	---	-----------------------------

39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:

Short Briefing 209 Summary Report

Report executed at: Oct 21, 2020 08:13 PM

<p>Fire containment efforts are in very remote areas and along steep, rocky roads. Medical response times are critical to life and safety of fire personnel. Snags within past fire scars are falling across travel routes.</p> <p>Highway 36 is closed from Norse Butte to the intersection of Highways 3 and 36. CALTrans is opening it twice a day for piloted traffic only at 0700 and at 1730. The Van Duzen Road from the North River Bridge to Zenia is closed. The communities of Kettenpom, Ruth, Three Rivers, Bradburn Creek, Coffee Pot, and Hettenshaw Valley remain in warning status.</p> <p>PG&E will be initiating a Public Safety Power Shutoff (PSPS) in the Ruby area at 2000 tonight that will extend until 2000 on Friday due to predicted high winds. These winds combined with the high temperatures and low relative humidity have caused the weather service to issue a Red Flag Warning as well.</p> <p>South Zone</p> <p>Fire containment efforts are in very remote areas and along steep, rocky roads. Resultant long medical response times are critical to life and safety of fire personnel.</p> <p>Snags within past fire scars are falling across travel routes.</p> <p>Forest-wide recreation closure continues.</p> <p>Evacuation status: Zero structures are in Ready; 600 are in Set evacuation status; 50 structures are currently in Go status.</p>	<table border="1"> <thead> <tr> <th></th> <th>Active?</th> </tr> </thead> <tbody> <tr> <td>Mass Notifications Completed</td> <td></td> </tr> <tr> <td>No Evacuation(s) Imminent</td> <td></td> </tr> <tr> <td>Planning for Evacuation</td> <td></td> </tr> <tr> <td>Planning for Shelter-in-Place</td> <td></td> </tr> <tr> <td>Evacuation(s) in Progress</td> <td>X</td> </tr> <tr> <td>Shelter-in-Place in Progress</td> <td></td> </tr> <tr> <td>Repopulation in Progress</td> <td></td> </tr> <tr> <td>Mass Immunization in Progress</td> <td></td> </tr> <tr> <td>Mass Immunization Complete</td> <td></td> </tr> <tr> <td>Quarantine in Progress</td> <td></td> </tr> <tr> <td>Area Restriction in Effect</td> <td>X</td> </tr> </tbody> </table>		Active? Short Briefing 209 Summary Report

Report executed at: Oct 21, 2020 08:13 PM

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:

North Zone

12 hours: **Values at risk include communities in the southern Trinity County Area (Ruth, Hettenshaw, Zenia, Kettenpom, Mad River). Recreations sites, community water systems, critical infrastructure including powerlines and gas lines, communication towers, Forest Service Lookouts, powerlines and ranch lands are threatened. Limited risk is expected during this time period with the forecasted weather.**

South Zone

Life safety and property conservation measures are in place with no incident threats to life or property. Natural and environmental cascading impacts due to significant suppression repair needs may exist.

North Zone

24 hours: **Values at risk include communities in the southern Trinity County Area (Ruth, Hettenshaw, Zenia, Kettenpom, Mad River). Recreations sites, community water systems, critical infrastructure including powerlines and gas lines, communication towers, Forest Service Lookouts, powerlines and ranch lands are threatened. Most of the values are located adjacent to or within the fire perimeter.**

South Zone

Life safety and property conservation measures are in place with no incident threats to life or property. Natural and environmental cascading impacts due to significant suppression repair needs may exist.

North Zone

48 hours: **Risk to values is expected to be reduced as mop up and hazard mitigation is completed throughout the Northwest Zone. Threats will shift away from communities outside the perimeter towards natural resource concerns related to suppression repair and infrastructure within the fire. General residential areas, county roads, recreations sites, community water systems, critical infrastructure including powerlines and gas lines, communication towers, Forest Service Lookouts, powerlines and ranch lands are threatened.**

Short Briefing 209 Summary Report

Report executed at: Oct 21, 2020 08:13 PM

South Zone	
Life safety and property conservation measures are in place with no incident threats to life or property. Natural and environmental cascading impacts due to significant suppression repair needs may exist.	
North Zone	
72 hours:	Risk to values is expected to be reduced as mop up and hazard mitigation is completed throughout the Northwest Zone. Threats will shift away from communities outside the perimeter towards natural resource concerns related to suppression repair and infrastructure within the fire. General residential areas, county roads, recreations sites, community water systems, critical infrastructure including powerlines and gas lines, communication towers, Forest Service Lookouts, powerlines and ranch lands are threatened.
South Zone	
Life safety and property conservation measures are in place with no incident threats to life or property. Natural and environmental cascading impacts due to significant suppression repair needs may exist.	
Anticipated after 72 hours:	Life safety and property conservation measures are in place with no incident threats to life or property. Natural and environmental cascading impacts due to significant suppression repair needs may exist.

43. Anticipated Incident Containment or Completion Date: 11/15/2020	42. Projected Final Incident Size/Area:	9. Cause: Unknown
---	---	-----------------------------

39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:

12 hours: **No critical resource needs**

24 hours: **No critical resource needs**

48 hours: **No critical resource needs**

72 hours: **No critical resource needs**

Anticipated after 72 hours: **No critical resource needs**
