Weather Discussion

*****Gusty offshore winds across Southern California Monday through Wednesday*****

High pressure approaching the West Coast from the Pacific will bring a warming trend along with minimum humidity in the teens to the region through next weekend. Maximum temperatures will warm to near or a little below normal today, with 60s to low 70s across the mountains and upper 70s and 80s in the valleys. Temperatures will approach 100 degrees across the valleys of Southern California by next weekend. North to east morning winds of 15 to 25 mph with gusts to 40 mph will surface across the mountains and below the canyons and passes of Southern California Monday through Wednesday. Otherwise, light offshore flow will occur across the region through next weekend.

Fuels/Fire Discussion

The potential for large fire will increase across the region through next weekend due to warming and very low humidity. The

extended period of warm and dry conditions will cause dead fuels to dry out rapidly. Gusty offshore winds will bring an elevated risk for large fire to Southern California Monday through Wednesday. Rapid rates of spread and long range spotting will be likely if an ignition were to occur in a windy area. Expect initial attack activity to increase as the week wears on.

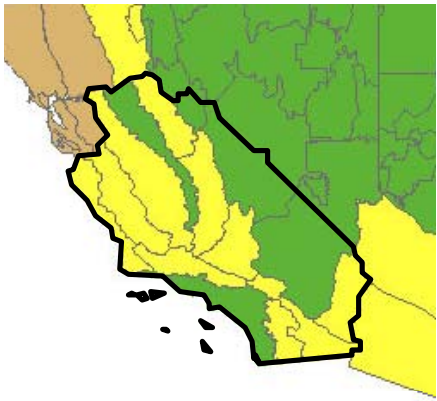

Resource Discussion

CWCG Preparedness Level 3, MACS Mode 2
