NATIONAL INTERAGENCY AVIATION FREQUENCY GUIDE

FOR OFFICIAL USE ONLY

The Aviation Frequency Guide has been compiled by the National Interagency Incident Communications Division (NIICD) / National Interagency Fire Center (NIFC) to support aviation communications within the Western United States. This guide lists the frequencies assigned to the Geographic Area Coordination Centers (GACCs) and interagency dispatch centers at the time of publication. Assigned frequencies and tones change. It is the responsibility of the user to obtain the correct frequency for their flight. Do not use any frequencies not assigned for use in your area.

An Interagency Aviation Technical Bulletin (IATB) dated Feb. 28, 2010 gives new direction in reference to toning the National Flight Following Frequency of 168.6500. Please look up the IATB link located on page 5. Should you have any questions regarding this change please contact the individuals listed at the bottom of the IATB.

NATIONAL FREQUENCY GUIDELINES

These guidelines are intended to clarify the use of the National VHF-FM air frequencies. Each frequency is authorized for specific uses, even though they are listed as “National”.

National Flight Following: 168.6500 Mhz

The National Flight Following frequency is used to monitor interagency and contract aircraft. This frequency is used for flight following official aircraft flying point-to-point. It is not intended to be used during mission flights or incident operations. All dispatch centers/offices having access to National Flight Following radio will monitor this frequency at all times. A Continuous Tone Code Squelch System (CTCSS) tone of **110.9** must be placed on the **transmitter AND receiver** of the National Flight Following frequency.

National Flight Following, 168.6500 Mhz uses and restrictions:

- Flight following, dispatch, and/or re-direction of aircraft
- Air-to-Ground and Ground-to-Air administrative traffic
- This frequency is **NOT** authorized for ground-to-ground tactical traffic

For more information on toning of National Flight Following refer to the Interagency Aviation Tech Bulletin:

[No. IA 2012-02](#)

NATIONAL AIR GUARD: 168.6250 MHz

The National Air Guard frequency is used for emergency aviation communications. Continuous monitoring of this frequency is mandatory by interagency dispatch centers, interagency and contracted aircraft assigned to the incident. Transmission on this frequency must include the Continuous Tone Code Squelch System (CTCSS) tone of 110.9 Hz. The National Air Guard frequency is pre-programmed on the last channel of all NIRSC VHF radios.

National Air Guard, 168.6250 MHz is authorized for:

- *Emergency air-to-air initial communications*
- *Emergency ground-to-air communications*
- *Initial call, recall, and redirection of aircraft when no other frequency is available*

*Note: The National Air Guard frequency is **REQUIRED** in the last channel of the ICS-205 Incident Radio Communications Plan on all fire incidents per the “Interagency Standards for Fire and Fire Aviation Operations”.*

National Interagency Air Tactics: 166.6125, 167.9500, 168.4000, 169.1500, 169.2000,

The National Interagency Air Tactics frequencies are used to support air-to-air and air-to-ground communications on incidents. Prior to use, the user must contact and coordinate with the Communications Duty Officer (CDO) at the National Interagency Incident Communications Division (NIICD) to minimize possible interference.

Air Tactics frequencies uses and restrictions:

- They shall be used only for air-to-air and air-to-ground communications
- They are **NOT** to be used as ground tactical operational frequencies
- Transmit power shall be limited to under 10 Watts
- Use of these frequencies in base stations and repeaters is prohibited
- Authorized for 20 NM and 3000 ft AGL from incident center point location, as per the Radio Frequency Assignment (RFA)

***Note: Some National Interagency Air Tactics frequencies are being utilized as Air-to-Ground frequencies for IA zones through out the country. These frequencies are in the control of each corresponding dispatch center, and should only be used within the designated Initial Attack zones.*

These frequencies are issued and coordinated by the Communications Duty Officer (CDO). Please contact the CDO at 208-387-5644 or e-mail at niicd@firenet.gov to coordinate any use or Radio Frequency Assignment (RFA) in effect.

Government Wide-Area Common Use: 163.1000 MHz and 168.3500 MHz

The Government Wide Common User frequencies are used on a non-interference basis and are not exclusive to any user. These frequencies are not to be used for Air-to-Ground operations and are prohibited by DOI and USDA from use as a frequency during operations involving the protection of life and property.

Incident AM Air-to- Air (Victor):

The use of AM frequencies is restricted to Air Operations only. All AM frequency assignments will be authorized and assigned only by the CDO (or COMC, if assigned). It is the responsibility of the incident COML to place requests and ensure immediate release of frequency assignments upon completion of incident. All Victor AM frequency assignments must be requested by the CDO office from the FAA on an incident-specific basis. It is imperative to place requests early in order to have AM frequency assignments available for the next operational period.

The typical service volume for a FAA AM fire fighting frequency is 20 NM and 5000 ft AGL.

- *All aviation frequency orders will be placed through the dispatch ordering system to the CDO.*
- *Any frequency coordinated by the FAA for fire fighting should be used only temporarily as the need arises, and only within the designated operational airspace.*
- *If the operational airspace changes due to fire expansion, the new requirements must be communicated to the NIFC Communications Duty Officer (CDO) who will properly coordinate with the FAA. As a result, the original frequency provided by the FAA may change to eliminate the possibility of interference to ATC or other fire fighting efforts.*

FREQUENCY ORDERING PROCESS:

Dedicated incident Air-to-Air and Air-to-Ground frequencies will be ordered by incidents through the established ordering process. All frequency requests are to be sent by the GACCs directly to the National Interagency Radio Support Cache (NIRSC) where the NIFC-CDO then coordinates with appropriate agencies and fills the frequency request in IROC.

FM Frequency ordering process consists of the following:

Incident--->Expanded/Dispatch Center--->GACC--->NIRSC

AM Frequency ordering process consists of the following:

Incident--->Expanded/Dispatch Center--->GACC--->NIRSC--->FAA

The CDO coordinates all National FS and DOI frequencies, as well as any additional frequencies released by other agencies for wildland fire support. All aviation frequencies are to be ordered on an Aircraft Order as an "A" Request Number in IROC. The COML will request, assign, and report all frequencies used on the incident to the CDO or COMC. Frequencies will be documented on the ICS-205 Incident Radio Communications Plan and on the ICS-220 Air Operations Summary forms. If additional frequencies are required, the COML will coordinate and order them through the established ordering process (through the GACC to NIRSC and filled by the CDO or COMC).

Additional frequencies may be available on a temporary basis, and may be requested by the CDO from the Washington Office Spectrum managers when:

- *All NIRSC national frequencies are committed within a specific geographic area*
- *New incidents within a specific complex create a need for additional frequencies*
- *The fire danger rating is extreme and the potential for additional new incidents is high*
- *Frequency congestion is occurring due to significant numbers of incidents in close proximity*

Assigned incident frequencies should be released immediately after the incident is turned over to the local jurisdictional agency. Coordination and approval is required from the CDO or COMC if frequencies are to be utilized after the transition.

NIRSC assigned frequencies shall **NOT** be moved or transferred from one incident to another without approval by and coordination with the CDO or COMC.

IMPORTANT AIRCRAFT INFORMATION

The airspace East of Porterville, CA is heavily used by military aircraft operating within the R-2508 Complex.

***Information regarding this airspace can be in the "R-2508 Users Handbook" at:*

<http://www.edwards.af.mil/Home/R-2508>

The "crosstalk" enables agency and military aircraft to monitor "in the blind" transmissions in this area. Aircraft in the area should periodically transmit their location, heading and altitude "in the blind" over the Air Guard using the ge-reference points noted in the R-2508 User Handbook or other common geographical references.

TDFM-136/A COMMAND QUICK REFERENCE

Radio Firmware 3.x.x

TiL 3342 E

For Radio Firmware: 3.x.x

1. LED channel squelch indicators – Lights when signal received (Top: Main, Bottom: Guard).
2. Channel parameter display – (2 line by 24 character LED display) (Top: Main, Bottom: Guard).
3. MAIN (Rotary+Switch) – Power ON/OFF and Main channel volume control.
4. GUARD (Rotary) – Guard channel volume control.
5. Squelch Defeat (Push button) – Press to open squelch (in analog modes of operation)
6. Keyloader/Data Port – Not available on some models. Use with KVL 3000+ keyloader. Data for some TDFM-136A's (SN FDA 1200 & up) only.
7. **MN/GD** (Toggle Switch) – Selects active channel (main or guard), **for transmit and memory edit.**
8. **G1/G2** (Toggle Switch) – Selects guard memory (GD1 or GD2), for transmit and edit.
9. **HI/LO** (Toggle Switch) – Selects transmit power, high (10W) or low (1W).
10. **KEYPAD** (12 Keys) – Control radio functions, 3 command levels as follows:

Basic functions on L1		Command Level 1: press the desired "Cmnd" key		
Cmnd	Function	Edit Keys	OK	Exit
1 CHAN	SELECT CHANNEL MEMORY	0 PROG TO 9 SQL ENTER THREE DIGIT CHANNEL NUMBER INTO MEMORY (001 to 230)	# ENTER	* ESC
