TRANSPORTING INJURED PERSONNEL BY HELICOPTER

USING "HEAR" (Hospital Emergency Administrative Radio) SYSTEM

When transporting injured personnel by helicopter under Agency Contract, the local Dispatch Center will telephone the appropriate hospital and request they monitor their "HEAR" system radio. The aircraft pilot or manager will tune in the "HEAR" Frequency, (normally 155.340 as primary) on the aircraft multi channel radio and establish direct communication with the hospital staff. Helicopter will verify frequency through the Dispatch Center.

Local Police will be requested to secure landing area when needed.

This procedure is to be used only for emergencies that warrant immediate hospital service.
