INTRODUCTION

The National Fire Equipment System (NFES) is part of the National Wildfire Coordinating Group's (NWCG) Fire Equipment Working Team (FEWT). The NFES was created to provide standards for fire supplies and equipment as well as an organized method for ordering and stocking those items. This catalog, national in scope, reflects the items admitted to the NFES and the cache locations where they are stocked.

The NWCG NFES Catalog consists of two parts.

Part 1: Fire Supplies & Equipment – This document pertains to incident fire supplies and equipment stocked by/ordered from the National Interagency Support Caches (NISC). Ordering from Part 1 is limited to federal and state agencies via the NISC located within their respective geographic areas. Some of the Part 1 catalog items are accessible online at: <http://www.nwcg.gov/nfes/nfes-item-lookup>

Part 2: Publications Catalog – This document contains the NWCG publications and wildland fire training course materials, which are stocked at/ordered from the Great Basin Cache (GBK), located at the National Interagency Fire Center (NIFC) in Boise, ID. Part 2 is only available online at www.nwcg.gov, and ordering is open to all parties. **Please refer to the instructions in Part 2 when ordering publications and/or course materials, as they are different than for Part 1.**

All NISCs perform an inventory once a year. The time frame varies among the caches. During inventory, resource orders for active incidents are the only orders processed. Routine orders are not processed during inventory. Call the NISC within your geographic area for specific information.

PUBLICATIONS

(Available on line only at www.nwcg.gov)

The National Wildfire Coordinating Group (NWCG) has developed this information for the guidance of its member agencies and is not responsible for the interpretation or use of this information by anyone except its member agencies. The use of trade, firm or corporation names in this publication is for the information and convenience of the reader and does not constitute an endorsement by the NWCG of any product or service to the exclusion of others that may be suitable.

This catalog is an annual publication jointly produced by the National Fire Equipment System (NFES) Committee and the NFES National Interagency Support Caches (NISC). Comments regarding this publication may be directed to any of the Cache Managers or members of the NFES Committee.

Additional copies of this publication (NFES #000362) may be ordered from the USDI BLM Great Basin Cache Supply Office, National Interagency Fire Center, 3833 S. Development Ave., Boise, ID 83705.

NFES NUMBER ASSIGNMENTS

The NFES number assignments provide a standard system of identification. **Every item in this catalog is assigned a six digit NFES number which must be included when placing an order.**

GENERAL INFORMATION

For convenience Part 1 of the catalog has been separated into sections as follows:

- HAZMAT SHIPPING GUIDE
- SUPPLY
- FORMS
- SIGNS
- KITS
- COMMUNICATIONS
- ALPHABETICAL INDEX
- NUMERICAL INDEX

ITEM LOCATION IDENTIFIERS

The location identifier shown with each item refers to the NISC(s) that stock the item. Please refer to these identifiers when placing an order. A reference list is provided below.

NRK = Northern Rockies Area, Missoula, MT

BFK = Billings, Billings, MT

CDK = Coeur D’Alene, Coeur D’Alene, ID

RMK = Rocky Mountain Area, Lakewood, CO

PFK = Southwest Area, Prescott, AZ

SFK = Southwest Area, Hurley, NM

LSK = Southern California, Ontario, CA

NCK = Northern California, Redding, CA

NWK = Northwest Area, Redmond, OR

LGK = LaGrande, LaGrande, OR

WFK = Wenatchee, Wenatchee, WA

SAK = Southern Area, London, KY

NEK = Eastern Area, Grand Rapids, MN

GBK = Great Basin Area, Boise, ID

AKK = Alaska Fire Service, Fairbanks, AK

UNIT OF ISSUE

There is an assigned national standard for the Unit of Issue (U/I) for every item in this catalog that must be used when placing an order.

Many item descriptions have a reference to a Standard Pack (Std Pk) amount. This reference is helpful when ordering large quantities of an item. For example, while the unit of issue for a Pulaski is EA, the standard pack is 10 per box. If the number of Pulaskis required on an incident were 45 it is highly recommended that the quantity requested be 50 EA. The incident would then receive 5 full boxes rather than 4 full boxes with 5 Pulaskis shipped amongst other items in another box.

Incidents that request U/I quantities equal to the “Std Pk” amounts significantly decrease the material handling time at the cache when filling the order as well as during the return and refurbishment process.

U/I abbreviations are as follows:

BD = Bundle	CN = Can	LB = Pound	QT = Quart
BE = Bale	CS = Case	LG = Length	RO = Roll
BG = Bag	DZ = Dozen	PD = Pad	RM = Ream
BK = Book	EA = Each	PG = Package	SE = Set
BT = Bottle	GL = Gallon	PL = Pail	SH = Sheet
BX = Box	HK = Hank	PR = Pair	SL = Spool
CL = Coil	KT = Kit	PT = Pint	TU = Tube

NATIONAL STOCK NUMBERS

A National Stock Number (NSN) is provided for those items purchased from General Services Administration (GSA) or Defense Logistics Agency (DLA).

ITEM PRICING

Prices are adjusted annually according to current costs and will not change unless a significant change in the cost of an item occurs during the year.

ITEM CATEGORIZATION

Cache Item Categories are utilized for return (loss tolerance/use report) and accountability purposes.

TRACKABLE ITEMS: Those items that a cache may track due to dollar value, sensitive property classification, limited availability, or other criteria set by each NISC.

Items that are considered trackable are usually engraved or tagged with a cache identification number. All trackable items are also considered durable.

These items must be returned to the NISC at the end of an incident. Appropriate documentation must be provided to the NISC for any losses.

Accountable property reports are included in the communications kits; use as necessary to report lost or damaged equipment.

100% accountability is expected for all trackable items.

CONSUMABLE ITEMS: Those items normally expected to be consumed during an incident.

Consumable items returned in serviceable condition will be credited to the incident.

Examples of consumable items are: batteries, plastic canteens, cubitainers, forms, MREs, fusees, hot food containers, petroleum products, and medical supplies.

SUPPLY ORDERS

EMERGENCY ORDERS

Emergency orders for incidents must be submitted via the current resource ordering process as defined within the National Mobilization Guide. All orders submitted to a NISC must contain the following required information:

- Incident/Project Name and Incident Order Number
- Office Reference Number (accounting data including complete appropriate agency charge coding)
- Billing (Administrative) Address
- Contact Name and Phone Number
- Incident Jurisdiction/Agency and Ordering Office
- Quantity and Unit of Issue (U/I) for each item
- NFES Number and Brief Description for each item
- Shipment Delivery Date/Time Needed; Realistic timeframes, ASAP will not be considered a priority
- Shipping Address – must be physical; do not use a PO Box
- Shipping method - NISCs are able to ship by air or surface transportation. Priority Overnight Shipping must be requested specifically on the order; if there is not a physical address associated with the delivery point (e.g., ICP, Helibase, etc.), then driving directions and/or a map may be required

Do not hesitate to ask for shipping recommendations from the NISC to insure orders will be delivered on time to meet incident objectives. The servicing NISC will convey shipping information to the ordering office that will include the incident order number, the (S) numbers for the items shipped, items cancelled, substitutions, the estimated or actual time of delivery and the shipping method used. If items are shipped to a destination for pick up by a designated person (i.e., “Hold & Call @ xxx airport”), that person must be provided with enough information to know what to look for, have the assigned tracking numbers and most importantly where to pick up the items.

Emergency resource orders for an active incident are processed as “Fill or Kill”, meaning that if an item is not available or cannot be substituted, that item and the (S) number will be cancelled. Items will not be back ordered on emergency supply resource orders. Once an (S) number has been cancelled, should an incident desire to attempt a reorder in the future, a new (S) number will need to be generated.

PREPAREDNESS ORDERS

Preparedness (routine) fire supply orders should be directed to the source of supply (i.e., DLA, GSA or private vendors), not the NISC.

* There are a few supplies considered sole-source items that may be ordered by agencies in very limited circumstances.

* Contact the NISC in your geographic area for specific information regarding preparedness ordering procedures/policies, sole-source availability and/or private vendors.

Each preparedness order creates an account for which the ordering office is responsible for payment. Submission of any order constitutes an agreement that ordering offices will make payment for items ordered as well as the associated shipping charges.

Items returned by the ordering offices will receive credit for the serviceable items only. Many items can be refurbished to serviceable condition and credit will be given when such work has been completed. Refurbishment costs will be charged to the original ordering office.

INCIDENT REPLACEMENT ORDERS

THESE ORDERS ARE TO BE SUBMITTED WITHIN 30 DAYS OF CONTROL OF THE INCIDENT.

Government Property – The incident agency should limit replacement to NFES items that are consumed, lost, damaged or rendered unserviceable on the incident. These items can be replaced at the incident or the incident can approve an Incident Replacement Requisition, OF-315 for replacement of items by a cache or at the home unit. Replacement of NFES items not carried by the cache supporting the incident (e.g. Wildland Firefighting Pants, Type II) must be authorized using an Incident Replacement Requisition, and the items should be replaced through the DLA wildland fire equipment program.

Caches may only process requests for NFES items. Requests for non-NFES items should be requested on a separate incident replacement requisition to be processed by the home unit.

IMTs or other incident personnel (e.g., IBA) may authorize replacement of non-NFES (non-standard cache) items if delegated authority by the incident agency. If no delegation exists documentation is provided to the incident agency for review and determination. Written documentation is provided to the home unit, if authorized by the incident agency, for the replacement of government property items that have been destroyed or rendered otherwise unserviceable while being used on the incident.

Replacement of non-standard items not procured through mandatory sources of supply may be authorized up to a dollar limit identified through these sources; costs beyond this amount should be covered by home unit program dollars. Prototype equipment will not be replaced with suppression funds. The incident agency may require the damaged property be turned in before replacement is authorized.

Property numbered items must be carefully tracked and property records documented.

Further information on this process is available in the Interagency Incident Business Management Handbook (PMS-902), available online at: <https://www.nwccg.gov/publications/902>

The OF 315 Form is also available online at: <http://www.gsa.gov/portal/forms/download/117014>

TYPE 1 and TYPE 2 INCIDENTS:

The incident Supply Unit Leader (SPUL) is responsible for handling the incident replacement requisitions when a TYPE 1 or TYPE 2 incident management team is assigned. The SPUL approves replacement requests based on Engine Accountability sheets or other fire equipment inventory documents approved by the requesting agency's home unit.

- If equipment and supplies are available at the incident for replacement, the request is filled by the incident Supply Unit.
- If equipment and supplies are unavailable at the incident, AND the requesting resource is not being immediately demobilized, the Supply Unit will submit a resource order through the appropriate channels to the servicing NISC. The order will be shipped to the incident and replacement will take place at the incident Supply Unit.
- If equipment and supplies are unavailable at the incident for replacement, AND the requesting resource is being demobilized, an OF-315 Incident Replacement Requisition (NFES 001300) is to be completed by the SPUL and forwarded to the servicing NISC.

Authorized approvals and signatures **MUST** be included on the requisition. For TYPE 1 and 2 incidents, these approvals are limited to the incident Supply Unit Leader, Logistics Section Chief, Support Branch Director, Incident Commander or Agency Administrator/ Representative.

TYPE 3 and TYPE 4 INCIDENTS:

The host Agency Administrator/Representative, i.e. the Fire Management Officer, will be responsible for handling the incident replacement requisitions for these types of incidents. The agency representative approves replacement

requests based on engine accountability sheets or other fire equipment inventory documents.

- If equipment and supplies are available at the incident for replacement, the request is filled by the incident host unit.
- If equipment and supplies are unavailable at the incident for replacement, AND the requesting resource is not being immediately demobilized, the host agency will submit a resource order through the appropriate channels to the servicing NISC. The order will be shipped to the incident and replacement will take place at the host agency.
- If equipment and supplies are unavailable at the incident, AND the requesting resource is being demobilized, an OF-315 Incident Replacement Requisition (NFES 001300) will be completed by the host agency and forwarded to the servicing NISC.

Authorized approvals and signatures MUST be included on the requisition. For TYPE 3 and 4 Incidents, the approvals are limited to the Agency Administrator/Representative i.e., the Fire Management Officer.

The incident's servicing NISC may forward the requisitions to the requesting unit's NISC for processing. If a NISC is unable to fill a request, they will then forward it on to a NISC that can.

INCIDENT TO INCIDENT TRANSFERS

Transfer of supplies and equipment between incidents is not encouraged, due to the increased possibility of accountability errors.

In instances when it is determined to be economically feasible and operationally advantageous, the SPUL from the incident that is releasing the items must document the following on the Interagency Incident Waybill (NFES 001472) and send to the servicing NISC to maintain proper accountability recording:

- NFES Number
- Quantity
- Unit of Issue
- Item Description
- Property number, if item is trackable
- Receiving incident name, number and resource order request number

Hazardous material shipping regulations are to be strictly enforced when transferring hazmat items (see Hazmat Shipping Guide section)

RECEIPT OF ORDERS

All equipment and supplies shipped from NISCs are identified on the cache issue forms. A copy of this form is included in the shipment as a packing list.

Upon delivery, all equipment and supplies become the responsibility of the ordering entity. All applicable Agency Property Regulations as well as all Federal Property Management Regulations will apply upon receipt of said items.

Trackable items will be marked with the issuing NISC's identification. Equipment with small engines will also be marked with the proper gas to oil ratio. Users are required to adhere to this ratio.

Receipt of Defective Items

Call the servicing NISC.

On an incident:

- Tag any broken or defective item with the problem (if known).
- Take the item to the supply area and let the Supply Unit Leader and/or Ordering Manager follow up by notifying the servicing NISC.

A similar process should be followed for items obtained from a local or district cache and followed through by the procurement or operations staff.

The NFES Committee issues NFES Memos regarding fire equipment defects, remedies, and other issues. The memos are posted at: http://www.nifc.gov/nicc/logistics/cache_memo.htm

NFES Evaluations

Occasionally equipment items will be shipped with an evaluation. If you should receive one, please take the time to respond. The NISCs are continually updating items per field requests and evaluations.

The NFES committee and the caches are open to suggestions, comments and concerns regarding the NFES items and the overall effectiveness of the National Fire Equipment System. Submit your feedback to any of the NISC managers or NFES committee members.

INCIDENT RETURNS

Returns to the issuing NISC should be made in the most expeditious manner available based upon cost.

All items must be identified with the returning agency/office, incident name and number to insure credit is applied appropriately per agency regulations. Use of the Interagency Incident Waybill (NFES 001472) is strongly encouraged for this purpose.

Consumable items returned in unused condition are credited to the incident, however, used consumables should not be returned.

Durable items in usable condition or economically repairable should be returned.

- * All hose, both new and used, should be rolled before returning to the cache.

Trackable items must be returned to a NISC at the end of incident use, or documentation must be provided to the NISC as to why it was not returned.

- * Repair tags should be affixed to all power equipment. If the equipment is not operating in a satisfactory manner, please make note of the possible cause of the problem (if known) on the tag.

Communications equipment must be returned to the National Incident Radio Support Cache (NIRSC) at the National Interagency Fire Center as soon as an incident or the requirement has ended.

- * Before sealing the kit boxes assure the contents will not be damaged in transit. Damages will be charged to the incident.
- * Accountable property reports are included in the communications kits and should be used as necessary to report lost or damaged equipment.

First aid kits and stations: NFES numbers 001617, 001727, 001728, 001760, and 001835 are maintained for all NISCs by the Northern Rockies Cache (NRK) in Missoula, MT.

- * Each kit will have the required servicing date indicated on the container.
- * After an incident, return the kits to the issuing NISC.
- * Medical waste must be transported to a licensed facility for proper disposal. Do not return medical waste to the NISC.

Hazardous material shipping regulations are to be strictly enforced when returning hazmat items (see Hazmat Shipping Guide section).

Recycling of plastics, cardboard, etc., is strongly encouraged and is the responsibility of the incident or host agency.

FIRE LOSS TOLERANCE REPORTING

In order to assist managers in keeping incident-related equipment and supply loss to a minimum, Type 1 and 2 incident management teams are required to maintain accountability for these items.

- * Guidelines and procedures for this accountability are provided in the Interagency Incident Business Management Handbook, Chapter 30, available electronically at: <https://www.nwcg.gov/publications/902>

To facilitate these procedures and provide oversight, a Fire Loss Tolerance Report is provided pertaining to NFES supply item usage on all Type 1 and 2 incidents, which has been accepted by the NWCG for all wildland fire agencies.

- * These reports are compiled by the NISC providing primary support to the particular incident.
- * Reports are forwarded to the responsible Agency Administrator within 60 days of the close of the incident.
- * The responsible Agency Administrator reviews the report and recommends appropriate follow-up action if losses are excessive. Those actions and recommendations are documented and filed with the final incident records.

The loss tolerance use rate is defined as all property and supplies lost, damaged or consumed on an incident.

- * This rate is reported as a percentage of the total dollar amount for items issued compared to the amount for items returned.
- * Consumable items are not included in this total.

INTRODUCING NEW NFES ITEMS

Incident management and wildland fire suppression is an evolving technology. Field personnel who would like to suggest new items for the NFES should convey those suggestions to your area NISC manager. The NISC manager will then determine suggestion acceptance based on past and anticipated need, space and storage considerations as well as national applicability.

To initiate consideration of a new item into the NFES please write, fax or e-mail the following information to your servicing NISC Manager:

1. Name and description of item.
2. Use and/or application of the item on an incident.
3. Have you used the item?
4. How did the item perform?

5. Is it better than another item that is currently used?
6. Recommended unit of issue.
7. Recommended standard pack.
8. Estimated cost.
9. Is the proposed item cheaper than something currently used?
10. Is there a dollar benefit in the value of the item and work performance?
11. Is there a safety consideration that makes the proposed item helpful?
12. What is the supply source for the proposed item?
13. Are there many vendors or just one?
14. Name, address and telephone number of known vendor(s).
15. Is the item considered a hazardous material?
16. Add any additional information that would enhance consideration of this item.

Provide your name, address, phone/e-mail in case of further questions and also to advise you of the acceptance or non-acceptance of your suggestion.

DLA & GSA ORDERING INFO

Federal Agencies are required to order thru DLA E-Mall. The current ordering instructions for DLA are located at: <https://dod.emall.dla.mil/acct/> DLA specialized ordering support instructions are posted to the EMALL (pre-login) landing page. The instructions are posted on the right-hand side of the login page under: "Self Help."

GSA transferred the Wildland Fire Program to DLA effective May 1, 2014. Information about this transfer is posted on the GSA website: http://www.gsa.gov/portal/content/104500?utm_source=FAS&utm_medium=print-radio&utm_term=fireprogram&utm_campaign=shortcuts

HAZMAT

NISC HAZARDOUS MATERIAL SHIPPING GUIDE

The hazardous material items listed in this section are stocked by the NISCs.

This information is intended as a convenience to help shippers comply with the limitations and other requirements of various federal and industry regulations.

- * If shipped by agency transportation, all Department of Transportation (49 CFR Parts 171-180) regulations apply.
- * **Anyone returning or transferring hazardous materials who is not familiar with hazmat shipping requirements should contact the servicing NISC for instructions.**
- * Noncompliance may result in civil penalties of up to \$75,000 being assessed to the individual shipping the hazardous materials.

Use of the *OF-316 Interagency Incident Waybill* is encouraged to insure that hazardous materials are listed in the required format.

- * The completion of this form is the responsibility of the “Ship From” unit and would be the Supply Unit Leader at an incident.
- * Hazardous material must be entered as the first item or highlighted on this form.

The 24-hour **Emergency Response Phone Number 800-424-9300** can be used on all transactions involving NISC shipping and waybill documents. If circumstances necessitate calling this number, the customer identification to use is “National Interagency Support Caches”

49 CFR NON-BULK CHECKLIST

- * **Identification** - Proper Shipping Name, Class, UN/NA Number, and Packing Group
- * **Packaging** - Will depend on the quantity shipped, single or combination loads
- * **Marking** - Proper shipping name, UN/NA number, and the name and address of recipient
- * **Labeling** - Primary hazard and placement
- * **Shipping papers** - Basic description and the emergency response telephone number
- * **Placards**– As necessary
- * **Emergency Response Information** - SDS sheets or DOT Emergency Response Guide

Access to SDS is available on line at <http://jrm.phys.k-state.edu/Safety/msds.html>

INCIDENT KITS SECTION

NFES #	ITEM DESCRIPTION	U/I	UNIT COST
--------	------------------	-----	-----------

The kits shown in this section have been developed with input from field user groups and have been identified as a national standard. This means that the kit is stocked by each NISC and is used on an interagency basis. When ordering from this section, the unit of issue (U/I) will be KT.

Contact your servicing NISC with questions, comments or suggestions, including proposals for new kits and/or additions/deletions to existing kits. Requests for new kits and kit changes must be submitted using the Kit Change request form available at <http://www.fs.fed.us/fire/cache/kitchg.html>.

NISCs may update kits on an attrition basis during the year the changes are made. This insures the greatest economy of operations within the national cache system. For this reason, kits ordered from a NISC may or may not contain identical items to those listed during the early part of the fire season. As kits are returned and repacked, they will be packed to the identified standard.

During peak periods of incident support, kits may be shipped with shortages based on availability of components. The packing list enclosed with each kit will reflect applicable changes. Any discrepancies from the packing list upon receipt of a kit should be reported to the servicing NISC.

All kits containing hazardous materials will be appropriately labeled and identified according to 49 CFR Part 172. Hazardous materials may be removed from kits that are shipped by commercial air freight.

Weight and cubic feet information provided with each kit description should be considered an estimated average only.

CACHE VANS ARE DESIGNED TO BE USED ON TYPE II OR LARGER INCIDENTS. THE CONTENTS OF THE MOBILE CACHE VAN ARE TO BE UNLOADED AT THE INCIDENT SITE SO THE VAN MAY RETURN TO THE ISSUING NISC FOR RESTOCKING. INCIDENTS SHOULD NOT HOLD THE VAN UNLESS PRIOR ARRANGEMENTS HAVE BEEN MADE WITH THEIR SUPPORTING NISC. THE CONTENTS LISTED BELOW ARE THE ITEMS THAT WILL BE SENT IF A MOBILE CACHE VAN IS ORDERED ACROSS GEOGRAPHICAL AREA BOUNDARIES AND SHOULD BE THE MINIMUM FOR ALL CACHE VANS. IF ADDITIONAL ITEMS ARE NEEDED, A RESOURCE ORDER LISTING ADDITIONAL ITEMS TO BE LOADED INTO THE CACHE VAN IS REQUIRED. EACH CACHE PROVIDING A MOBILE CACHE VAN WITHIN ITS GEOGRAPHICAL AREA WILL SEND ITEMS AND QUANTITIES AGREED UPON BY USERS WITHIN THAT AREA, SO CONTENTS MAY VARY FROM THE LIST BELOW.			KT	\$120,249.33

INCIDENT COMMUNICATIONS

FIELD ASSISTANCE

The Communications Duty Officer (CDO) is available 24/7 throughout the year. Geographic Area Frequency Managers (COMCs), and/or Communications Unit Leaders (COMLs)/Communications Technicians (COMTs) will coordinate directly with the CDO on all telecommunications issues.

The CDO can be contacted at: Phone: (208)387-5644
 Toll-Free: (877)775-3451
 FAX: (208)387-5892
 E-mail: nifccdo@fs.fed.us

NATIONAL INCIDENT RADIO SUPPORT CACHE (NIRSC)

The USDA Forest Service (FS) and the Department of the Interior (DOI) maintain the National Incident Radio Support Cache (NIRSC) at the National Interagency Fire Center (NIFC). NIRSC is a national interagency resource and is composed of multi-channel radio systems, frequencies, and specialty radio communications equipment available for supporting complex incident communications. Priority for the use of this equipment will be for active fire incidents.

The information outlined below must be considered when ordering and using NIRSC equipment. All NIRSC frequencies, both UHF and VHF, must be cleared for use **BEFORE** shipment is made. All NIRSC frequencies are cleared and assigned by the CDO or COMC if assigned.

NIRSC EQUIPMENT AND FREQUENCY ORDERING PROCESS

All NIRSC equipment and frequency requests shall be processed using the Resource Ordering and Status System (ROSS). Equipment will not be shipped without having a resource order request. No frequencies will be issued or assigned without having a resource order request started or in the system. NIRSC equipment and frequencies will be requested by the incident and the request sent to NIRSC via the local ordering process. The ordering process consists of the following:

Incident--->Dispatch Center--->GACC--->NICC--->NIRSC

PROJECT REQUESTS:

Communications equipment for projects, e.g., Forest Health Protection (FHP), are shared with many users. For that reason, it is requested that required project use time frames be kept to a minimum. The equipment should be expedited back to the NIRSC at NIFC immediately upon completion. The requestor (project) will pay for the shipping charges to and from NIFC as well as the equipment refurbishment costs. Refurbishment costs pertain to the replacement of batteries used on the project. There will be no further costs unless the radios are lost, damaged or stolen.

The standard kits available to support projects are NFES 004381, 004312, 004300, and 004330. Other types of equipment may be available if the project should have unusual requirements. All orders for communications equipment must be submitted via a resource order per the established National Interagency Mobilization procedures.

NIRSC STARTER SYSTEMS (NFES# 004390)

The NFES 004390 Starter System is designed to be the initial system issued to support incident communications requirements. The system supplies equipment which will establish immediate communications for command, tactical, logistics, and air operation requirements. A Starter System consists of 11 assorted pieces of equipment with 7 sets of antenna masts, and is ordered as a system. Type I and Type II Interagency Incident Management Teams (IMTs) will typically have a 4390 Starter System as part of the teams pre-order and it does not need to be reordered.

Individual kits are available to supplement the Starter System or to provide support for smaller incidents. The CDO or COMC can provide assistance in determining a specific incident's communications requirements. Please contact the CDO before placing a request for a 004390 Starter System.

When ordering a Starter System, appropriate frequency assignments must be obtained by contacting the CDO or, when assigned, the appropriate COMC. To insure proper frequency coordination, please provide the latitude and longitude of the incident to de-conflict with existing incidents or other agency frequency assignments.

Each GACC accommodates up to four (4) Starter Systems in preposition during their established fire season. This is to provide faster delivery time of the equipment to the incidents located within the GACC. The CDO **must** be contacted when an order for a Starter System is received for an incident. The CDO or COMC will identify which prepositioned Starter System (if any) will be assigned to the incident, based on availability and frequency conflicts. A replacement (backfill) Starter System may be requested after commitment of a prepositioned Starter System. Replacement Starter Systems orders may not be filled where congestion of spectrum is an issue. In these instances, special frequency Starter Systems will be built on an as needed basis and shipped directly to the incident.

Note: Not all incidents require a 4390 Starter System to provide incident communications. Contact the CDO or COMC to determine the required and appropriate incident communications needs.

NIRSC radios are synthesized and contain both Forest Service (FS) and Department of Interior (DOI) frequencies that are not "cleared" nationally. Other agencies use these frequencies and in some cases, in very critical and sensitive areas. All frequencies must be approved for the areas where they are intended for use. None of the national frequencies are to be used without prior coordination with the CDO.

In areas with extreme frequency congestion, the CDO or COMC will advise incident COMLs of available frequencies and equipment.

ADDITIONAL EQUIPMENT

Consult with the CDO (or COMC, if assigned) if additional equipment is needed. The CDO/COMC may want to review the system design in order to verify the need. If the CDO/COMC can fill the request, the CDO/COMC will inform the incident COML/COMT of assigned equipment.

EQUIPMENT DEMOBILIZATION

Any radio equipment with temporary frequencies **must** be released first due to licensing requirements. All National Incident Radio Support Cache (NIRSC) communications equipment should be inventoried, sealed and returned to NIRSC immediately after the incident is turned over to the local jurisdictional agency. Coordination and approval is required from the CDO or COMC if equipment is to be utilized after the transition.

NIRSC communications equipment shall **NOT** be moved from one incident to another without being returned to NIRSC for refurbishment. Unused and red-sealed equipment may be moved, but only upon approval and coordination with the CDO or COMC.

NIRSC USER'S GUIDE

The NIRSC User's Guide is designed to assist communications personnel with reference material and guidelines when ordering and utilizing NIRSC frequencies and equipment.

The NIRSC User's Guide is shipped with all Command Repeater/Link Kits (NFES# 004312) and can also be ordered through the Great Basin Cache Supply Office (GBK). This guide is updated and published yearly and all COMLs and COMTs should maintain a current copy of the guide as part of their personal COML/COMT kit. The NIRSC User's Guide is also available for download at: <https://www.nifc.gov/NIICD/docs/NIRSCUsersGuide.pdf>

GENERAL RADIO BATTERY INFORMATION

When ordering batteries, round the order to the next full STANDARD PACK. (See Standard Pack entry in the Radio and Equipment Kit Battery Matrix or see listing in the GENERAL SECTION of the NFES Catalog, under Battery, Radio.)

All of the radio batteries utilized in the NIRSC are of alkaline technology. Alkaline batteries should have a shelf life of two years with only about 10% degradation in power. The batteries used in NIICD equipment and applications can probably be stored for four years, however the life will be noticeably shorter.

Battery life with the clamshell-type battery holder will depend upon the AA cells installed, type of radio used, whether the radio is in “scan” mode, and the power output setting on the radio. P25 radios drain batteries more quickly than analog radios. *(See Radio and Equipment Battery Matrix)*

Using a voltmeter to determine the state of an alkaline battery can yield very inconsistent results. A battery that no longer works on a repeater and which has not had a load placed on it for a few days may read “good” on a voltmeter (a voltmeter does not apply the proper current load). To correctly test the batteries in a repeater with a voltmeter, put the repeater in transmit condition to apply a load to the batteries. *(See Figure 1)*

Figure 1: Sample Voltmeter Test with Equipment Under Transmit Load

REPEATERS: Replace batteries if the voltage is at 10.5 volts with the transmitter keyed up. Starting voltage is about 15 volts with the transmitter operating. Repeater batteries should last 5-7 days under heavy usage. *(See Battery Matrix)*

Note: NIRSC recommends testing the polarity of each battery before installation. Some batteries have been known to come labeled incorrectly from the manufacture.

RADIOS: The transmit LED is the best indicator of battery life. If the light holds bright for 3 seconds while transmitting on high power, the battery should be in good shape. Don't rely on the battery gauge on any radio since they are designed for use with rechargeable batteries. Radio batteries should easily last a shift (usually 12 hours). *(See Battery Matrix)*

Note: Alkaline batteries are not considered hazardous waste, except in California. These batteries should be disposed of at the incident to save on shipping costs.

Remove battery covers straps from the batteries prior to disposal and return them with the kits.

RADIO AND EQUIPMENT BATTERY MATRIX

BATTERY TYPES				
NFES#	000030	000033	001023	001241
VOLTAGES	1.5Volts (AA)	1.5Volts (D)	7.5Volts	9 Volts
STANDARD CACHE PACKAGE	24/PG	12/PG	4/BX	24/BX

RADIO CLAMSHELL BATTERY REQUIREMENTS					
RADIO TYPE	000030 (AA)	000033 (D)	001023 (7.5 V)	001241 (9 V)	Replacement Cycle
4381KD (KING VHF)	*9				**Every 12 Hours Max
4381KP (KING KNG)	*8				**Every 8 to 12 Hours
4244X2 (MOTOROLA UHF)	*12				**Every 8 to 12 Hours
4244MD (MIDLAND UHF)	*6				**Every 8 to 12 Hours
ICOM IC-A6 (AM)	*6				**Every 12 Hours Max

** Note: Numbers reflect batteries required per clamshell.*
*** Note: Replacement Cycle is under ideal normal usage and is only a NIRSC recommendation. Battery consumption is directly dependent on channels scanned, priority mode, light operation, digital mode, and (PTT) Push-To-Talk cycles and duration.*

KIT BATTERY REQUIREMENTS					
EQUIPMENT TYPE	000030 (AA)	000033 (D)	001023 (7.5 V)	001241 (9 V)	Replacement Cycle
4248 - UHF REPEATER			*4		** Every 5 Days Max
4312 - VHF REPEATER			*4		** Every 5 Days Max
4300 - AM BASE STATION	*40		*4		** Every 5 Days Max
4370 - GROUND A/C	*40		*4		** Every 5 Days Max
4330 - REMOTE			*4		** Every 5 Days Max
4410 - PA SYSTEM	*3	*48			

** Note: Numbers reflect batteries required per equipment kit.*
*** Note: Replacement Cycle is under heavy usage and is only a NIRSC recommendation.*

4390 STARTER SYSTEM BATTERY REQUIREMENTS		
SYSTEM TYPE	000030 (AA - 1.5 Volts)	001023 (7.5 Volts)
4390 w/DPHX/Motorola	*664 (28 Standard Packages)	**20 (5 Standard Boxes)
4390 w/DPHX/Midland Radios	*568 (24 Standard Packages)	**20 (5 Standard Boxes)

** Note: AA Battery requirements are per Replacement Cycle of one (1) per shift.*
*** Note: 7.5 Volt Battery requirements are per Replacement Cycle of 5 days max*

BATTERY CONFIGURATIONS

In situations when there is heavy voice traffic on the system or where access to the site is limited, NIRSC recommends a double-battery system to avoid power failure during the incident. Even with a double battery system, voltage should be checked or batteries replaced every 7 days. *(See Figure 2)*

Solar Panel Kits (NFES# 004080) are available from NIRSC and are recommended for use at sites with limited access. Contact the CDO for Solar Panel Kit availability before ordering.

Figure 1: +15 VOLT Standard Battery Configuration Series/Parallel configuration requires one (1) set of 7.5 Volt Batteries (NFES 001023)

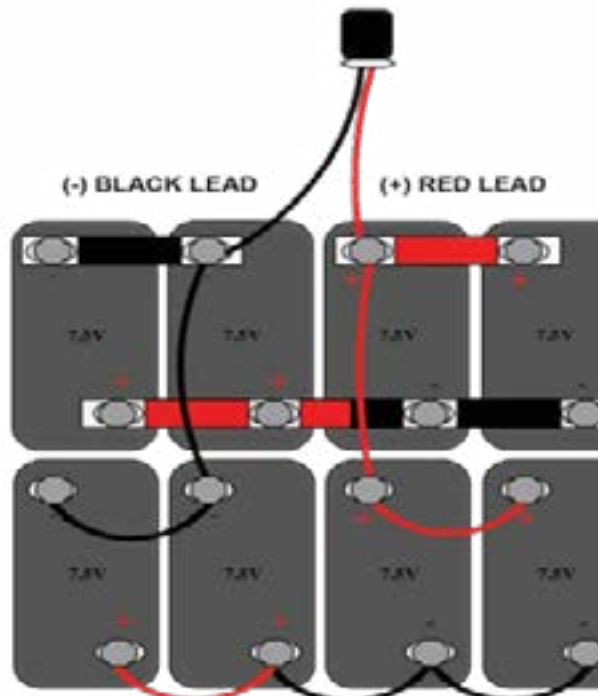

Figure 2: +15 VOLT Double Battery Configuration Series/Parallel configuration requires two (2) sets of 7.5 Volt Batteries (NFES 001023)

Figure 3: +15 VOLT Series Battery Configuration Series configuration requires two (2) each of 7.5 Volt Batteries

Note: NIICD recommends that a deep cycle RV/marine battery and charger be purchased and utilized once three or more sets of batteries are needed at the site.

SOLAR PANEL KIT (FLEXIBLE)**NFES 004080**

\$898.16

LOC: GBK
 WT: 51.1 LB
 CU FT: 1.0
 DIM: 22"X 11"X 8"

The Solar Panel kit allows NIRSC equipment to operate off a 12 Volt rechargeable battery. It contains a 60 watt flexible solar panel and a 12 Volt 35 Amp-Hour sealed lead acid battery. The system should power a repeater indefinitely, provided the solar panel is illuminated with full sunlight most of the day. In the event there is no sunlight, the internal battery will give approximately two days backup power (for a repeater under moderate use).

For greater energy reserves, an additional battery can be purchased at the incident and connected to the system (a cable is included in the kit for doing this). The backup battery must be a deep cycle 12V sealed lead acid (preferably gel cell or AGM) of the largest capacity that can be safely maneuvered. Use caution when moving batteries since batteries are heavy, each battery can weigh up to 50 lbs. A fully charged 12 Volt 75 Amp-Hour battery should last at least four days under moderate use.

- Do not transport a sealed lead acid battery unless it is strapped down so as to be immobile and the terminals are covered to prevent a short circuit.
- Using a Solar Panel Kit in conjunction with a Voice Board allows the equipment to run using both the supplied alkaline batteries and the solar panel kit rechargeable battery.
- If using both solar and alkaline, the voice board monitors the solar voltage and will automatically switch to alkaline power when the solar voltage falls below 10 Volts. When the solar voltage rises above 12 Volts, it will switch back to solar power. This conserves the alkaline batteries, allowing the equipment to run off one set of batteries for extended periods of time without the need to change them.

NFES	QTY	DESCRIPTION

KITS CONTAIN ACCOUNTABLE PROPERTY

Each kit contains 16 UHF radios for use by incident support personnel (i.e. Plans, Logistics, and Finance). The UHF radio allows two-way line-of-sight communications utilizing UHF Radio Frequency (RF) propagation. The UHF radios can operate independently or in conjunction with UHF Repeater Kit (NFES# 004248).

All NIRSC UHF Logistics radios are multichannel/multi-group-capable. Each radio has 16 channels per group/zone available for programming user frequencies. All NIRSC UHF radios are front panel programmable via the keypad. They can be operated in either Wide/Narrowband Analog and Digital P25 depending on incident requirements.

The radios are pre-programmed with NIRSC UHF frequencies, including all simplex and repeater pair frequencies, to be compatible with each system in which they are included. Updated frequency sheets are provided in each kit, as well as T-Cards for radio checkout and tracking. The radios in each kit are of the same manufacturer and model.

The NFES # 004244 kit boxes are labeled on the outside to indicate the type of radios contained within, according to the following convention:

- 4244MD – MIDLAND RADIOS (Example: 4244MD-FCK-XXX)
- 4244X2 – MOTOROLA XTS2500 RADIOS (Example: 4244X2-FCK-XXX)
- All UHF frequencies must be cleared for use BEFORE shipment.
- Call the CDO for assignments for camp, logistics, and link network.
- When placing the order do not specify the manufacture using the sub-kit numbers.
- Refer to the frequency charts and diagrams provided in each kit for additional information.
- NIRSC recommends that users limit the number of scanned channels to no more than three (3) and to use the HIGH POWER TX mode sparingly. These options increase the load on the batteries and will rapidly reduce battery life.
- A cloning cable is provided in each UHF radio kit. Please return the cloning cable with each kit.

The NFES# 004248 Logistics Repeater is a battery-operated unit used to extend radio coverage in mountainous terrain or where line of sight between portable radios is not possible. The Logistics repeater is used in conjunction with a Logistics Radio Kit, NFES# 004244 or the Remote Kit (NFES# 004330) with an appropriate UHF radio installed.

The Logistics Repeater can also be utilized to link two or more Command Repeater/Links (NFES# 004312) together as a central hub in the command network. When linking multiple Command Repeaters through the Logistics Repeater, all of the linked Command Repeaters must have line of sight back through the Logistics Repeater central hub. Additionally, the Logistics Repeater can be used to expand the flight following network on an incident when linked through an Aircraft Link (NFES# 004370).

The Logistics Repeater can be operated from the supplied alkaline batteries at 15 VDC or from an external 12 VDC power source (i.e. heavy duty car battery, DC power supply, or solar panels). If a 12 VDC power supply is used, it should have a minimum 5 Amp continuous duty capability.

- [NIRSC UHF repeater frequencies must be cleared for use by the CDO.](#)
- [UHF Logistic Repeaters are delivered pre-programmed from NIRSC and cannot be programmed or tuned in the field.](#)
- [NIRSC UHF Repeaters are currently NOT CTCSS tone-control capable.](#)

MAFFS TACTICAL RADIO KIT**NFES 004250****\$5,212.26**

LOC: GBK
 WT: 29.7 LB
 CU FT: 1.1
 DIM: 19" X 14" X 7"

The MAFFS Tactical Radio Kit is a miniature version of the NFES# 004381KD Command Radio Kit. The VHF radio allows two-way line-of-sight communications utilizing VHF Radio Frequency (RF) propagation. The MAFFS Tactical Radio Kit contains six (6) King VHF-FM DPHX handheld radios and is primarily used and reserved for MAFFS activations where VHF tactical line-of-sight communications is required.

All NIRSC VHF Command radios are multichannel/multi-group-compatible. Each radio has 16 channels per group/zone available for programming user frequencies. All NIRSC VHF radios are front panel programmable via the keypad. They can be operated in either Wide/Narrowband Analog and Digital P25 operations, depending on incident requirements.

- All VHF frequencies must be cleared for use BEFORE shipment. Contact the CDO for all VHF assignments.

The Ground VHF-AM Base Station Kit is a portable 760 Channel VHF-AM base station. This kit cannot be linked. The 4300 kits are used primarily as base stations to contact aircraft on non-fire projects or fire incidents. Base stations transmit at 7 watts, are capable of 10 preset channels, scan, and use 115 VAC or 12 VDC through an automobile accessory plug-in as a power source. Four (4) handheld ICOM VHF-AM radios are included, as well as T-cards for radio checkout. If this kit is to be used as an FAA control tower, the NFES# 004300 order MUST be placed by an incident COML

COMMAND REPEATER/LINK KIT**NFES 004312****\$18,650.73**

LOC: GBK

PIECE 1/BOX:	PIECE 2/BOX:	PIECE 3/MASTS (2 SETS):
WT: 87.4 LB	WT: 24.6 LB	WT: 24 LB
CU FT: 3.65	CU FT: 1.2	CU FT: 0.3
DIM: 20" X 21" X 15"	DIM: 18" X 14" X 8"	DIM: 2 @ 60" X 3" X 3"

The Command Repeater/Link is a portable unit used to extend radio coverage in mountainous terrain or where line of sight between portable radios is not possible. The Command Repeater is used in conjunction with a Command/Tactical Radio Kit (NFES# 004381) or the Remote Kit (NFES# 004330) with an appropriate VHF radio installed.

The Command Repeater can be used as a stand-alone VHF Command network repeater. Additionally, the Command Repeater can be linked to two or more Command Repeater/Links through the UHF link modules provided in each kit. The UHF Links are used to link UHF-FM and VHF-FM together to extend area coverage for larger incidents. If an additional repeater is necessary to provide coverage, a separate Command Repeater/Link (NFES# 004312) must be ordered. Orders will be filled based on priority needs and frequency availability.

All Command Repeaters are capable of being CTCSS tone-controlled (RX & TX). Call the CDO for more information on tone-control applications. The CDO or COMC if assigned will assign a CTCSS tone to each Starter System when the system is assigned to an incident. The incident will be advised to use this tone on all VHF repeaters and tactical frequencies assigned to the incident.

The Command Repeater can be operated from the supplied alkaline batteries at 15 VDC or from an external 12 VDC power source (i.e. heavy duty car battery, DC power supply, or solar panels). If a 12 VDC power supply is used, it should have a minimum 5 Amp continuous duty capability.

Command Repeaters can be linked by only two methods:

- Simplex: Command Repeaters are linked via a simplex UHF frequency. Each Command Repeater in the system must be in line-of-sight with each other.
- Duplex: Command Repeaters are linked via a duplex UHF frequency using a Logistics Repeater as a hub. Each Command Repeater in the system must be in line-of-sight with the Logistics Repeater.

- Due to airline shipping weight restrictions, this kit will be shipped in two (2) boxes.
- Box one will contain the radio equipment and antennas. Box two will contain the remaining accessories and its contents will be listed on a separate inventory sheet.
- NIRSC Command Repeater/Link frequencies must be coordinated by the CDO (or COMC if assigned).
- Command Repeaters come pre-programmed from NIRSC and cannot be programmed or tuned in the field.
- UHF Link Modules come pre-programmed from the NIRSC. Contact the CDO for approved link frequency when linking multiple Command repeaters.
- A UHF Whip Antenna and a UHF Yagi (directional) Antenna with 20 foot RF cables are included in the Command Repeater/Link (NFES# 4312) kit to accommodate all installation options for linking the Command Repeater.

COML KIT

NFES 004320

\$5,812.71

LOC: GBK
 WT: 22.1 LB
 CU FT: 1.2
 DIM: 18" X 14" X 8"

The COML kit assists the COML with cloning of handheld radios. The kit consists of one radio, clamshell and cloning cable for every type of handheld available at NIRSC. This kit does not come with antennas, holsters or any other radio accessories. These radios are not to be swapped out for broken kit radios. The contents of this kit are the responsibility of the COML and must be returned to NIRSC once the incident is transferred to the local unit.

COML Kit contains the following radios with cloning cables:

- King/Relm DPHx, KNG-P150S
- Motorola XTS 2500/5000
- Midland STP404A (UHF), STP105B (VHF)

REMOTE KIT

NFES 004330

4330MD - \$3,421.21

4330X2 - \$6,532.03

LOC: GBK

<u>4330MD:</u>	<u>4330X2:</u>	<u>PIECE 3/MASTS (1 SET):</u>
WT: 88.2 LB	WT: 92.0 LB	WT: 12 LB
CU FT: 3.7	CU FT: 3.7	CU FT: 0.3
DIM: 20" X 21" X 15"	DIM: 20" X 21" X 15"	DIM: 60" X 3" X 3"

The Remote Kit is an auxiliary base station used to control either the Command Repeater (004312), UHF Logistics Repeater (004248), or the Aircraft Link (004370) when direct line of sight is not possible. Use of this kit in conjunction with NIRSC radios, allows a remote base station to be installed up to 1/4 of a mile away from the ICP, camp, helibase, etc.

The radio, chassis, and battery are enclosed in a steel box which is removable from the shipping container. This allows for placement of the box at the base of the antenna while running only a wire pair to the desk set location. VHF and UHF Radios are included in the chassis box, eliminating the need for multiple interface cables. Kits are labeled on the outside to indicate the type of radios contained within, according to the following convention:

- 4330MD - Midland Radios (Example: 4330MD-FCK-XXX)
- 4330X2 - Motorola Radios (Example: 4330X2-FCK-XXX)

DIM: 20" X 21" X 15"	DIM: 18" X 14" X 8"	DIM: 2 @ 60" X 3" X 3"

The Ground Aircraft Radio/Link Kit is a portable, battery-operated, all-in-one, VHF-AM aircraft base station and UHF-FM link used for helibase personnel to communicate or coordinate rotor wing aircraft operations on the incident. All aircraft kits operate as a base station or as a crossband link. There are two (2) sets of antennas (VHF-AM and UHF-FM) for use in the link configuration. All kits include four (4) handheld ICOM VHF-AM programmable radios.

The Ground Aircraft Radio/Link Kit uses a 12 Volt DC power source. The unit can be operated from the supplied alkaline batteries at 15 Volts DC or from an external 12 Volt DC power source (i.e. heavy duty car battery, DC power supply, or solar panels). If a 12 Volt DC power supply is used, it should have a minimum 5 Amp continuous duty capability.

- Due to airline shipping weight restrictions, this kit will be shipped in two (2) boxes.
- Box one will contain the radio equipment and antennas. Box two will contain the remaining accessories and its contents will be listed on a separate inventory sheet.
- Additional ICOM radios can ordered if needed. Call the CDO for ordering assistance and availability.

KITS CONTAIN ACCOUNTABLE PROPERTY

The Command Tactical Radio Kit is designed for supporting the command and tactical operations of an incident to allow direct communications with field personnel that are within line of sight. The VHF radio allows two-way line-of-sight communications utilizing VHF Radio Frequency (RF) propagation. Each kit contains sixteen (16) VHF handheld radios. All radios are configured with all tactical, command, and National Air frequencies. NIRSC VHF frequencies must be cleared for use by the CDO prior to use. Updated frequency charts are included in each kit, as well as T-cards for radio checkout and tracking. The radios in each kit are of the same manufacturer and model. VHF Command Tactical Radios are programmed by the NIRSC to be compatible with each system in which they are included.

The NFES # 004381 kit boxes are labeled on the outside to indicate the type of radios contained within, according to the following convention:

- 4381KD - KING DPHX RADIOS (Example: 4381KD-FCK-XXX)
- 4381KP – KING KNG RADIOS (Example: 4381KP-FCK-XXX)

All NIRSC VHF Command radios are multichannel/multi-group-compatible. Each radio has 16 channels per group/zone available for programming user frequencies. All NIRSC VHF radios are front panel programmable via the keypad. They can be operated in either Wide/Narrowband Analog and Digital P25 operations, depending on incident requirements.

- All VHF frequencies must be cleared for use **BEFORE** shipment.
- Call the CDO for Command Repeater, tactical, and air-to-ground network assignments.
- **When placing the order do not specify the manufacturer.**
- Refer to frequency charts and diagrams provided in each kit for additional information.
- The NIRSC recommends that users limit the number of scanned channels no more than three (3) and to use the HIGH POWER TX mode sparingly. These options increase the load on the batteries and will rapidly reduce battery life.
- A cloning cable is provided in each VHF radio kit. Return the cloning cable with each kit.

CU FT: 60.98	CU FT: 2.1
DIM: 48" X 44" X 51"	DIM: 7 @ 60" X 3" X 3"* Weight dependent on configuration.

The 004390 Starter System is designed to be the initial system issued to support incident communications requirements. The system is comprised of equipment which can be used to establish immediate communications for command, tactical, logistical, and air operation requirements. A Starter System consists of 11 boxes** of assorted equipment with 7 sets of masts, and is ordered as a system.

Note:

**A starter system may only contain one (1) remote kit (NFES# 004330) due to equipment availability.

When ordering a Starter System, appropriate frequency assignments must be obtained by contacting the CDO or, when assigned, the appropriate COMC. To insure proper frequency coordination, please provide the latitude and longitude of the incident to de-conflict with existing incidents or other agency frequency assignments.

LOC: GBK
 WT: 57.0 LB
 CU FT: 3.7
 DIM: 21"x 20"x 15"

The Amplivox Public Address Kit allows for broadcasting information or paging from a central point and is primarily used at the ICP or in staging areas which house large numbers of personnel. The PA kits contains both wireless and wired microphones for convenience. Each PA unit can operate independently or can be operated together via a wireless transmitter.

The kits can be powered by either AC or DC batteries. The Kit also contains a fresh set of batteries to operate each unit and wireless microphone and transmitter.

MAFFS PRINTER NETWORK KIT**NFES 004420****\$1,183.87**

LOC: GBK

PIECE 1/BOX:

WT: 71.1 LB

CU FT: 6.5

DIM: 30" X 25" X 15"

The MAFFS Printer Network Kits are designed to provide a common wireless printer and internet access for MAFFS activations and trainings with personnel from various agencies. This kit may be used on other incidents but only when other incident use will not impact possible MAFFS use. The MAFFS Printer Network Kit comes in two boxes: Network and Accessories. Both boxes are required for system operation. Administrative access is required to load the printer's drivers on agency laptops. Direct connection to the router allows printer use and internet access for those computers lacking wireless capability. The kit comes with a HP printer/scanner/fax, router, bridge, and Verizon MiFi. It also comes with several Ethernet cables, a surge suppressor, spare ink cartridges, two reams of paper and a USB drive.

- ALL LAPTOPS THAT WILL UTILIZE THE KIT'S PRINTER MUST ARRIVE AT THE INCIDENT WITH ADMINISTRATIVE ACCESS PRESET.
- The process for granting administrative access in the field is very cumbersome, so obtaining access after arrival at the incident is unlikely to occur.

AIR ATTACK KIT**NFES 004499****\$28,512.32**

LOC: GBK
 WT: 56.4 LB
 CU FT: 3.1
 DIM: 29" X 17" X 11"

The Air Attack Kit is built to supplement communications in contracted fixed-wing aircraft for missions ranging from reconnaissance to complex air attack. This kit can fit between the pilot and copilot seats in some aircraft (i.e. Cessna) and slightly behind front seats in other aircraft. This kit creates an interface between the aircraft's existing audio system/radios and the Air Attack Kit radios. All kits have the capability to operate two (2) Technisonic Industries radios. Each kit will have two (2) TDFM-136 radios.

The NFES# 004499 Air Attack Kit has a Dual Audio Control (COM/FM1/FM2/AUX1/AUX2/SC) for the pilot and copilot/ATGS, connectors for two (2) AUX-FM-type portable radio adapters, and two (2) passenger headset adapters. Kit headset jacks are 600-ohm impedance using standard audio and mic-type connectors. The pilot and copilot/ATGS utilize case mounted headsets. Both passengers can operate all radios through the copilot/ATGS's transmitter selector. The "SC" position is simulcast transmissions on both COM (aircraft VHF-AM) and FM1. Each kit includes two (2) passenger headset adapters, two (2) PT-300 PTT adapters, two (2) BNC barrel connectors (for AUX-FM antenna connections), and instructions. Two (2) externally mounted VHF-FM antennas are also required.

The Air Attack kit will **ONLY** be installed in aircraft meeting National Air Tactical/Reconnaissance Standards and passing an avionics inspection by a qualified Forest Service/AMD Avionics Inspector.

The NFES# 004499 Air Attack Kit AUX-FM portable radio adapter connectors accept the same adapter connections used in all helicopters. Contact the NIICD-CDO for availability of King & Racal AUX-FM adapter cables.

LOC: GBK
 WT: 55.0 LB
 CU FT: 3.1
 DIM: 29"x 17"x 11"

The Air Attack Training kit contains the necessary equipment to operate an Air Attack (NFES# 004499) in a classroom environment. There is a 12 Volt DC power supply plus adapters and cables to connect an ICOM A3 or A6 portable radio, to simulate an aircraft VHF-AM transceiver, and two headsets. The kit can be connected to two antenna dummy loads (student radio programming training) or two small antennas (student simulations requiring transmissions), depending on classroom needs. The kit also includes a BK/King GPH/DPH headset adapter for sandbox exercises.

DIM: 20" X 21" X 15"	DIM: 20" X 21" X 15"	DIM: 2 @ 60" X 3" X 3"

The Airbase Kit is for MAFFS activations and temporary tanker bases. This kit provides a means to communicate with aircraft in noisy environments. It comes with a portable VHF-AM/VHF-FM base station radio, 10 handheld ICOM VHF-AM radios, and eight (8) sets of headsets, helmet adapters, and adapters to connect a headset/helmet to the ICOM radio. The VHF-FM base station can monitor both a main frequency and Air Guard. The base station radio is configured to operate on 115 Volts AC but, when requested, 12 Volts DC or 24 Volts DC power cables can be included for use with a deep cycle automotive/marine battery (Not supplied. Will need to be purchased locally). When additional handheld VHF-AM radios are needed, order the NFES# 004240 Airbase Accessories Kit.
