

## Southwest Area Complex Incident Management Team Initial Order Template

This initial order is intended to standardize the resource requests that the host dispatch center will process, typically on day one, while much of the CIMT is still mobilizing. The rest of the CIMT preorder will be communicated once the incident situation and needs are developed. Many factors need to be considered and these resources below will not be needed in every situation. Dispatch Centers and the LSC (or designee) MUST communicate before generating these requests.
