

SOUTHWEST ANTICIPATED RESOURCE DEMAND (SWARD)

REPORT DATE: 11/13/18 11:43
 DATA VALID FOR: 11/9/18

Southwest PL: **1**
 National PL: **1**

A. BY STATE

	Fri	Sat	Sun	Mon	Tue	Wed	Thu
INITIAL ATTACK	11/9	11/10	11/11	11/12	11/13	11/14	11/15
ARIZONA	8	8	8	9	13	13	13
NEW MEXICO	2	2	2	2	7	7	7

***Above tables indicate anticipated resource demand for local and national resources.**

B. BY PREDICTIVE SERVICES AREA

	Fri	Sat	Sun	Mon	Tue	Wed	Thu
ARIZONA	11/9	11/10	11/11	11/12	11/13	11/14	11/15
1	8	8	8	8	11	11	11
2	8	8	8	8	11	11	11
3	16	16	16	16	16	16	16
4	8	8	8	8	13	13	13
5	9	9	9	9	12	12	12
6N	10	10	10	12	16	16	16
6S	5	5	5	7	13	13	13
NEW MEXICO/WEST TEXAS							
7	4	4	4	4	8	8	8
8	4	4	4	5	13	13	13
9	0	0	0	0	12	12	12
10	2	2	2	2	6	6	6
11	2	2	2	2	8	8	8
12	1	1	0	0	8	8	8
13	4	4	4	4	6	6	6
14N	2	2	2	2	8	8	8
14S	1	1	2	2	8	8	8

***Above table indicates anticipated demand for national resources (i.e. IMT; IHC; T1H; etc).**

POTENTIAL	SWARD LEGEND	
LOW	primarily local resources for initial and/or extended attack ... possible IHC.	Values <=35
MODERATE	possible extended attack utilizing local resources augmented by air and/or IHC resources; mostly Type 3 IMT incidents ... possible T2 IMT incidents.	Values 36 - 59
HIGH	extended attack / long term ... potential heavy mobilization of air - IHC; as well as Type 1 and/or 2 IMT(s) .	Values 60-91
VERY HIGH	potential for expansive mobilization of air; IHC; and Type 1 and/or 2 IMT; possible Area Command ... long term incidents.	Values >=92

C. GENERAL DISCUSSION

ANTICIPATED RESOURCE DEMAND	No High Risk triggers or Red Flag Warnings have been issued for today. No lightning received over the past 24-hrs. Drought conditions have subsided somewhat with the exception of the Four-corners area - where conditions remain EXTREME to EXCEPTIONAL. Fuel moisture levels (100 & 1000-hrs) have dropped into the LOW to MODERATE range for most of the Southwest Area. Fire restrictions have been lifted on all public lands within the Southwest Area. RESOURCE DEMAND POTENTIAL BY STATE: LOW for Arizona; LOW for New Mexico. RESOURCES DEMAND POTENTIAL BY PSA: LOW for Arizona; LOW for New Mexico.
WEATHER	A generally dry forecast with below normal temperatures overall expected into next week. However - an impulse later on SUN/early MON will bring a quick shot of rain snow shwrs across northern/eastern NM. Expect some significant snow in the Sangre de Cristos...otherwise sharply cooler/colder temperatures early next week modifying closer to normal by midweek onward.
FIRE RISK	No Risk of significant fire potential area-wide.

PURPOSE: The purpose of the SWARD is to provide fire managers a general view of those Predictive Service Areas where the potential demand for national resources (IMT's and IHC's primarily) will be greatest. The output takes into account the SWCC 7-Day Fire Potential Outlook and enhances it with an historical analysis of assignment history for IMT's and IHC's through the year (i.e greater demand in June vice February) - then factors in the latest intelligence on Fire Restrictions - Ignition - and Precipitation.

This product produced by the Intelligence Operations Section; Southwest Coordination Center.
